
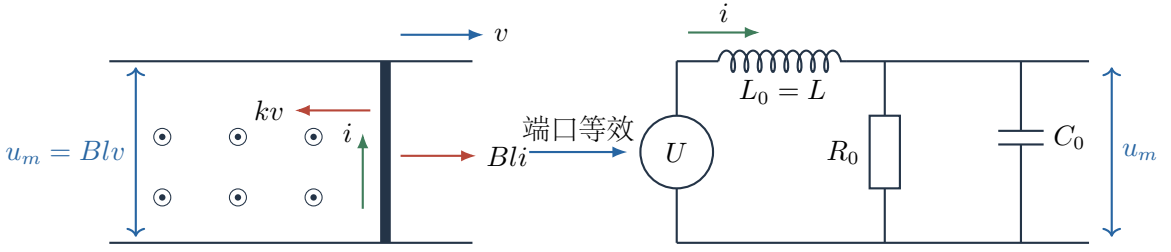
导轨理想；导体棒电阻忽略；回路自感为 L



$$i = \frac{m}{B^2l^2}\dot{u}_m + \frac{k}{B^2l^2}u_m$$

$$R_0 = \frac{B^2l^2}{k}$$

$$C_0 = \frac{m}{B^2l^2}$$

L_0 与 $(R_0 \parallel C_0)$ 串联
