
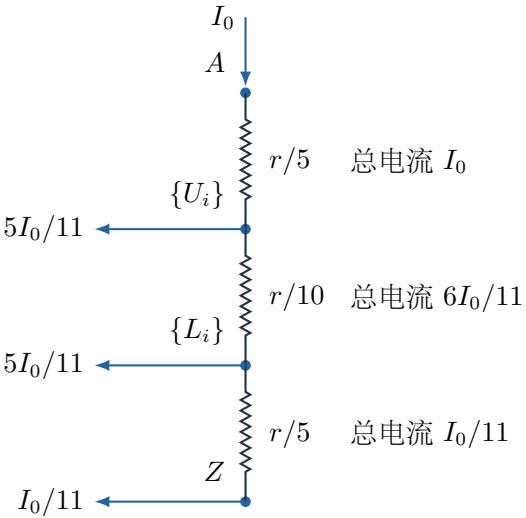
每条棱的电阻均为 r



辅助网络的四个等势层

两组辅助注流相加

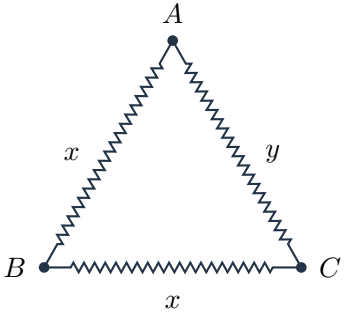
正号为外部注入

A • $I_0 + I_0/11 = 12I_0/11$

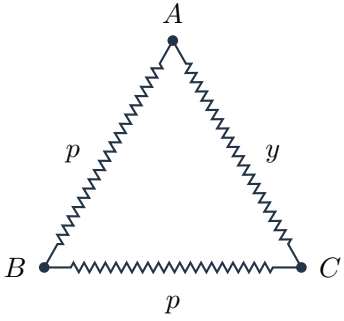
$P \neq A, C$ • $-I_0/11 + I_0/11 = 0$

C • $-I_0/11 - I_0 = -12I_0/11$

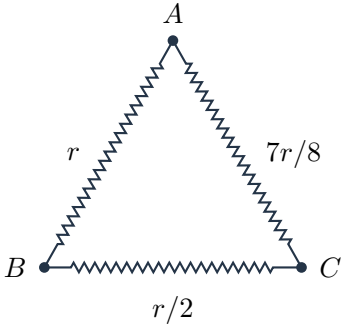
真实端口电流 $I = 12I_0/11$



取出 AB、BC



恢复 AB、BC



仅恢复 BC

$p = r \parallel x$，测量端口为 A、C 时 B 浮置
