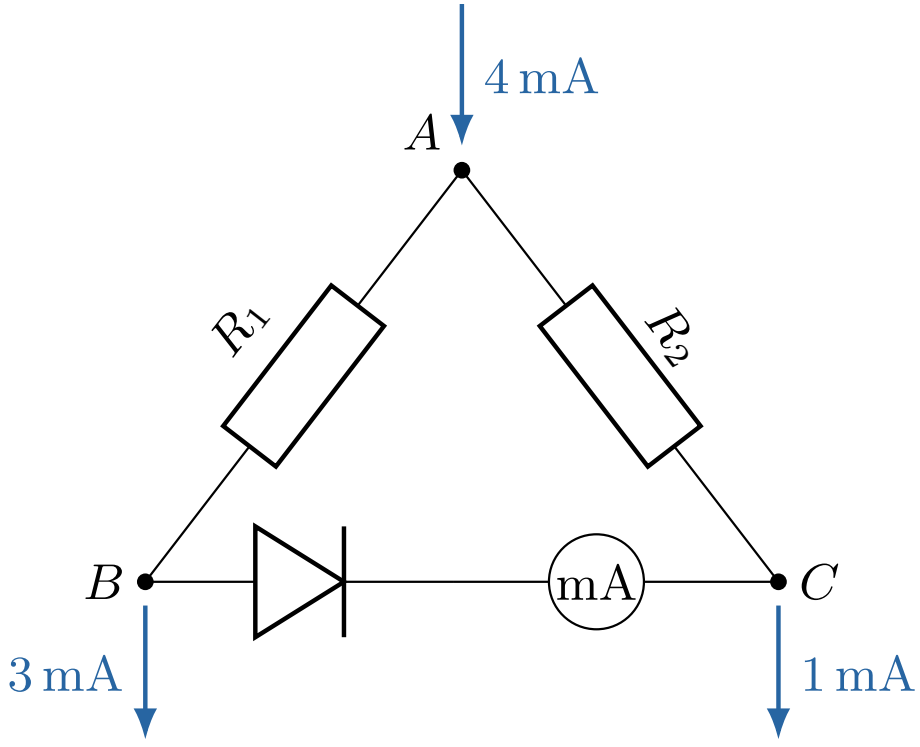
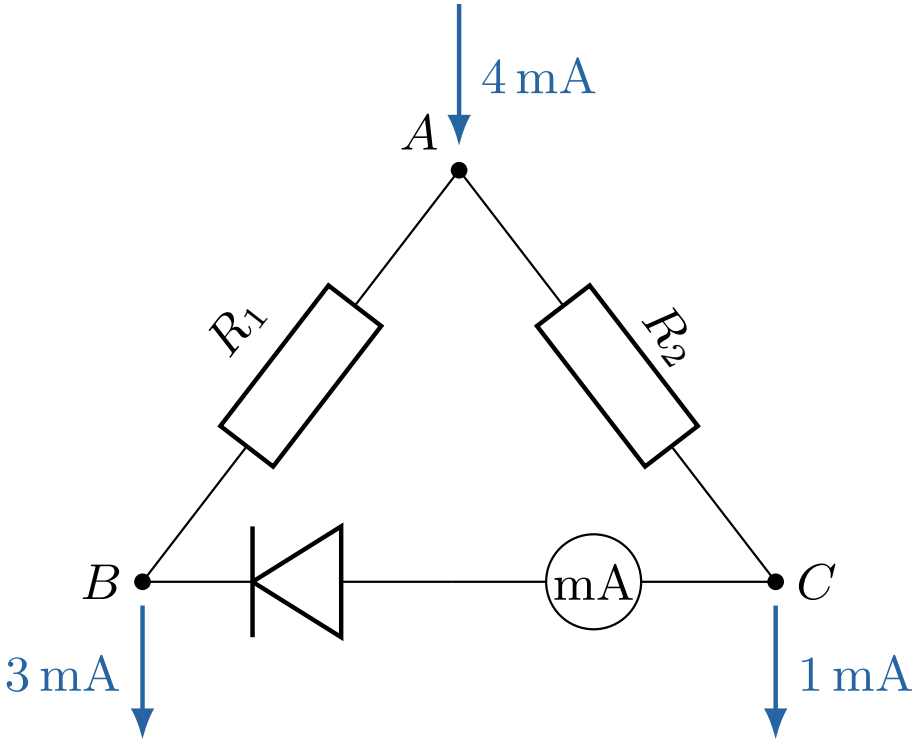
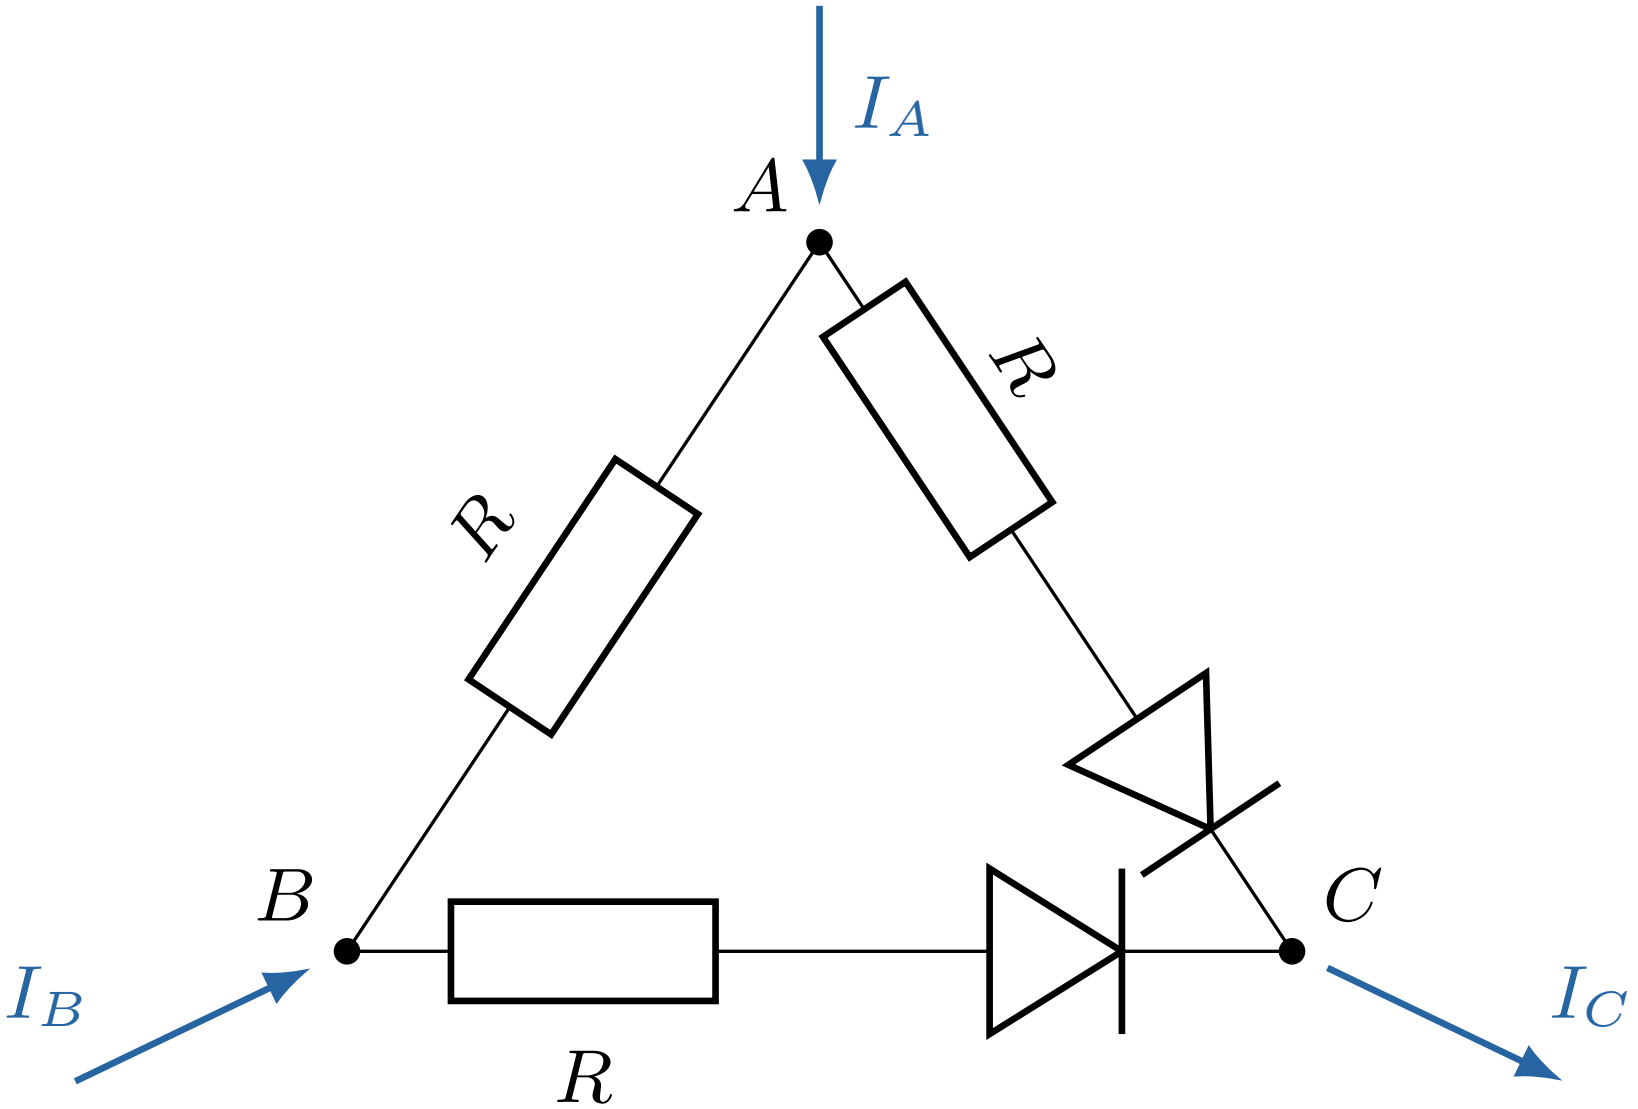
恒压降模型



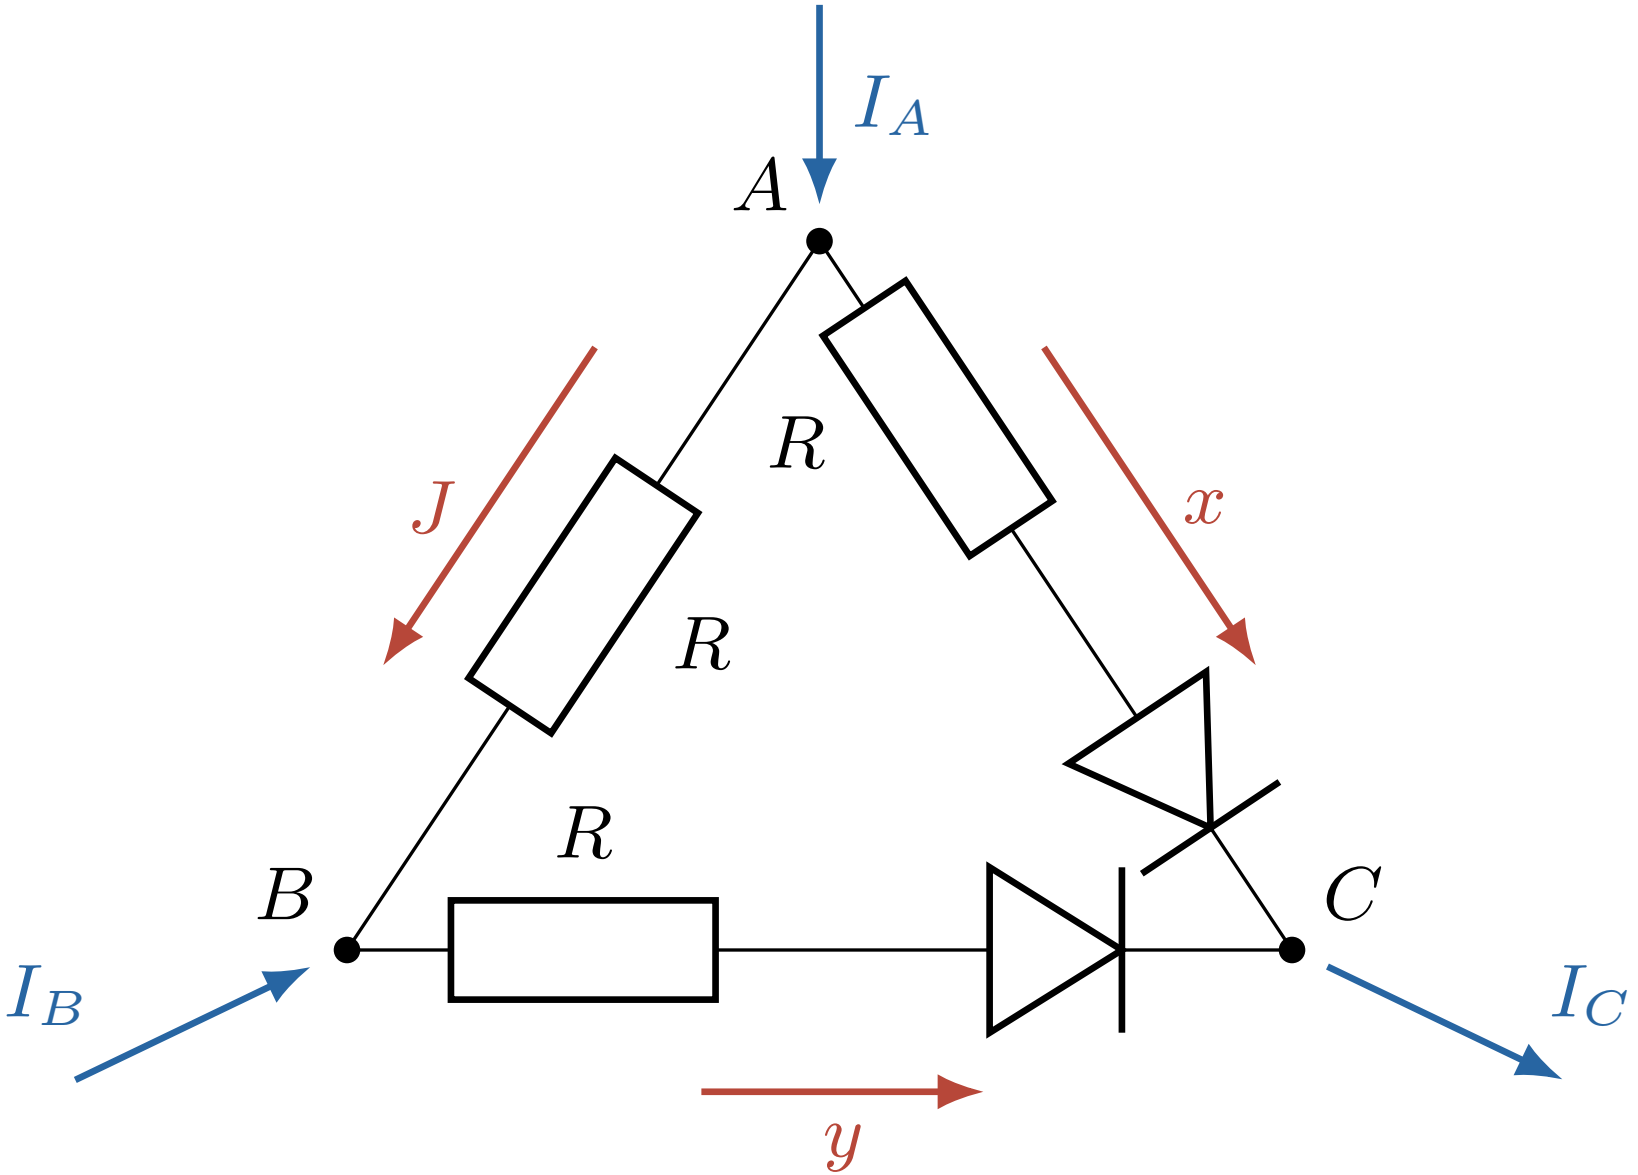
（a）正向为 $B \to C$



（b）正向为 $C \to B$

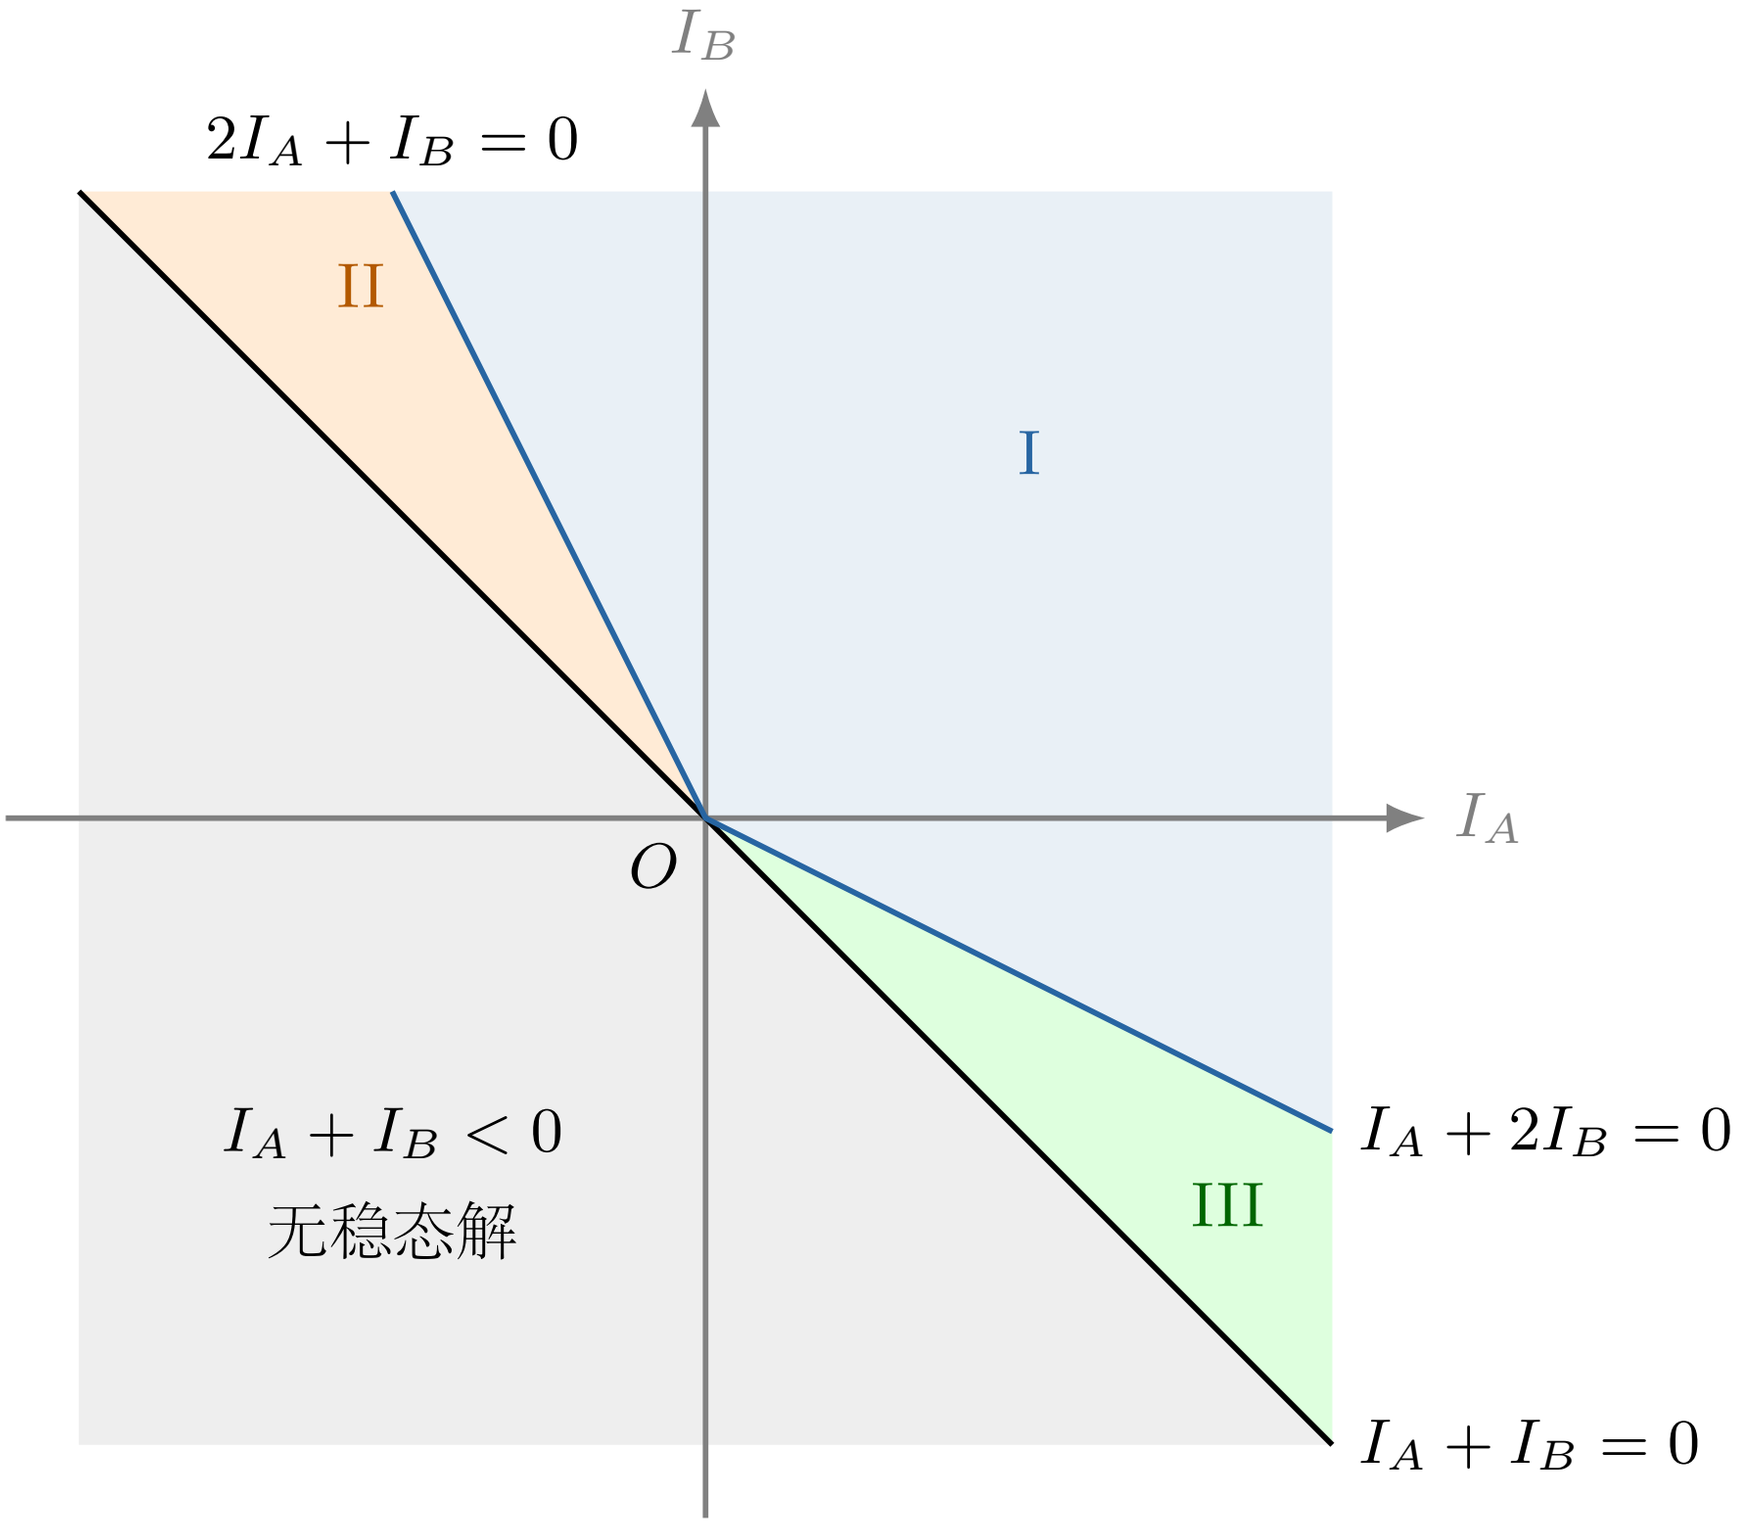


$$R = 1\,\mathrm{k}\Omega, \qquad U_0 = 2\,\mathrm{V}$$



$$I_A = J + x, \quad I_B = y - J$$

$$I_C = x + y = I_A + I_B$$



I：两支路导通；II：$A \to C$ 截止；III：$B \to C$ 截止。

斜线 $I_A + I_B = 0$ 上两二极管电流均为零，电势一般不唯一。
