
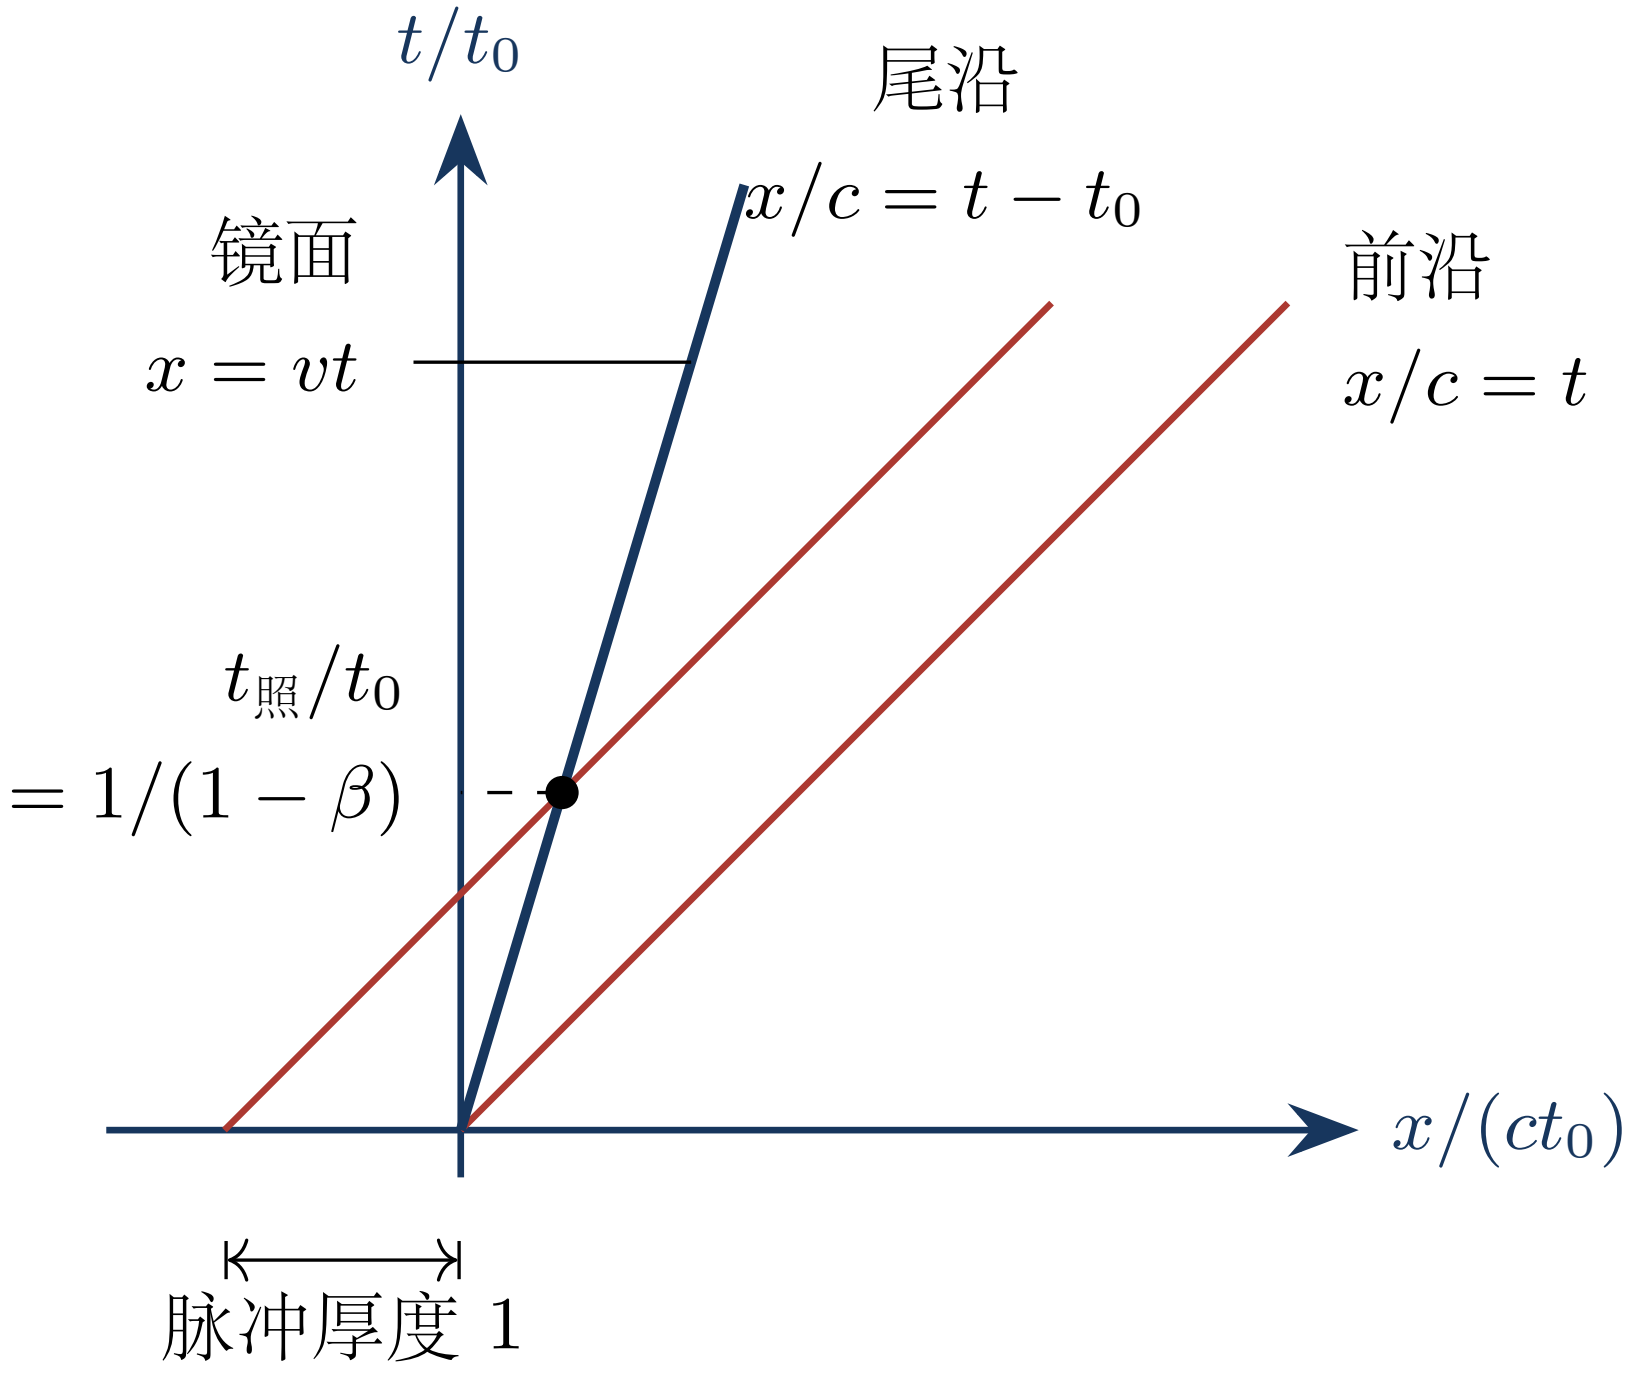
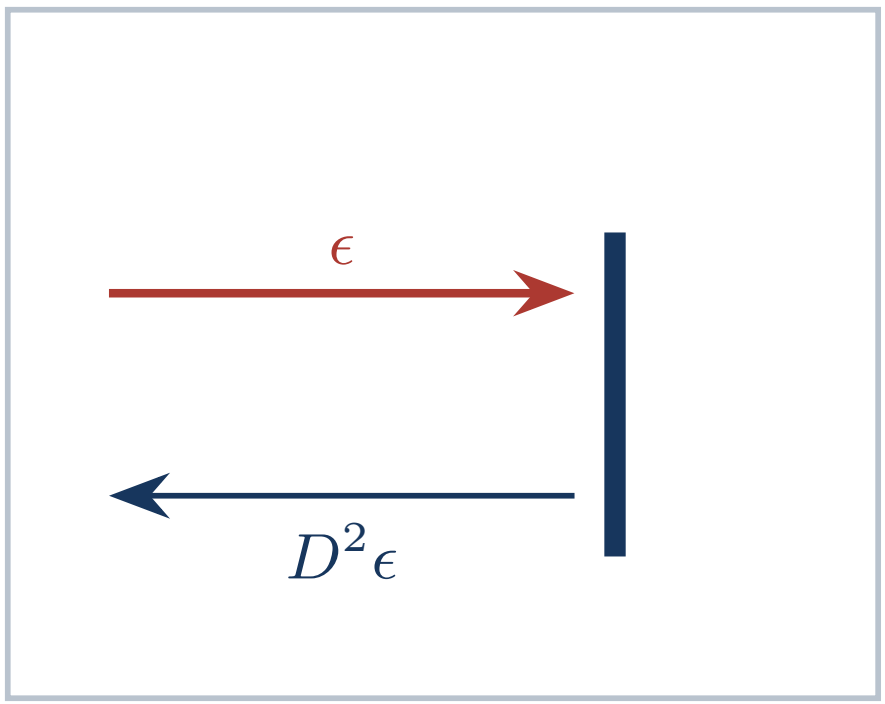
源系厚度 ct_0，镜面向前运动

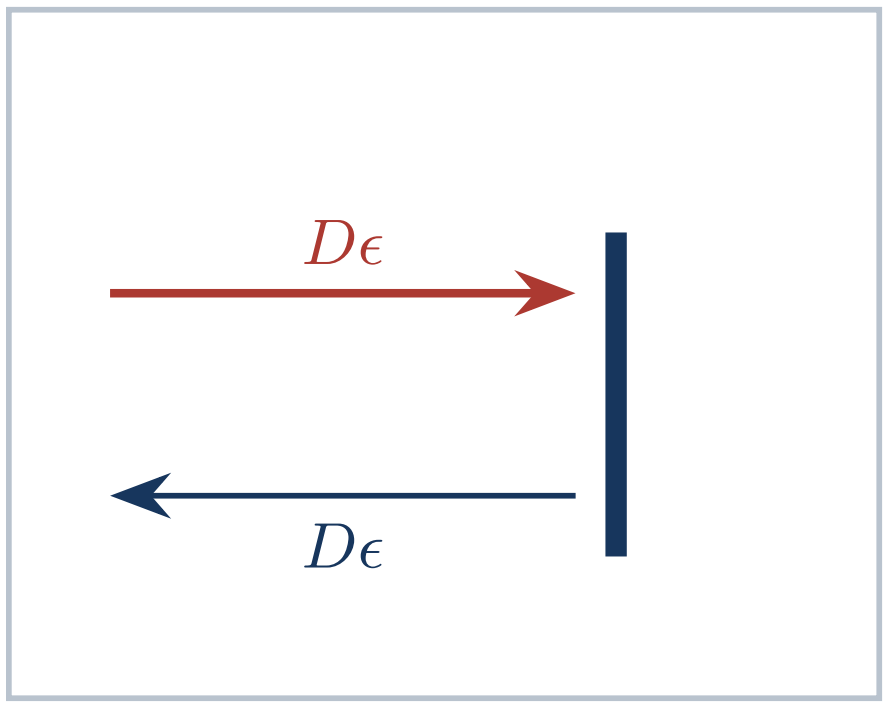


示意取 $\beta = 0.3$，尾沿与镜面相交

核弹系

镜面瞬时静止系

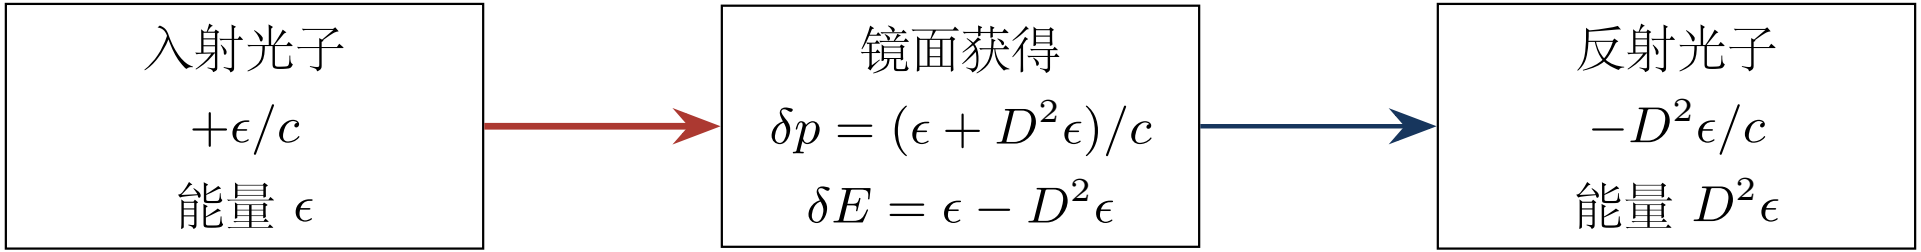




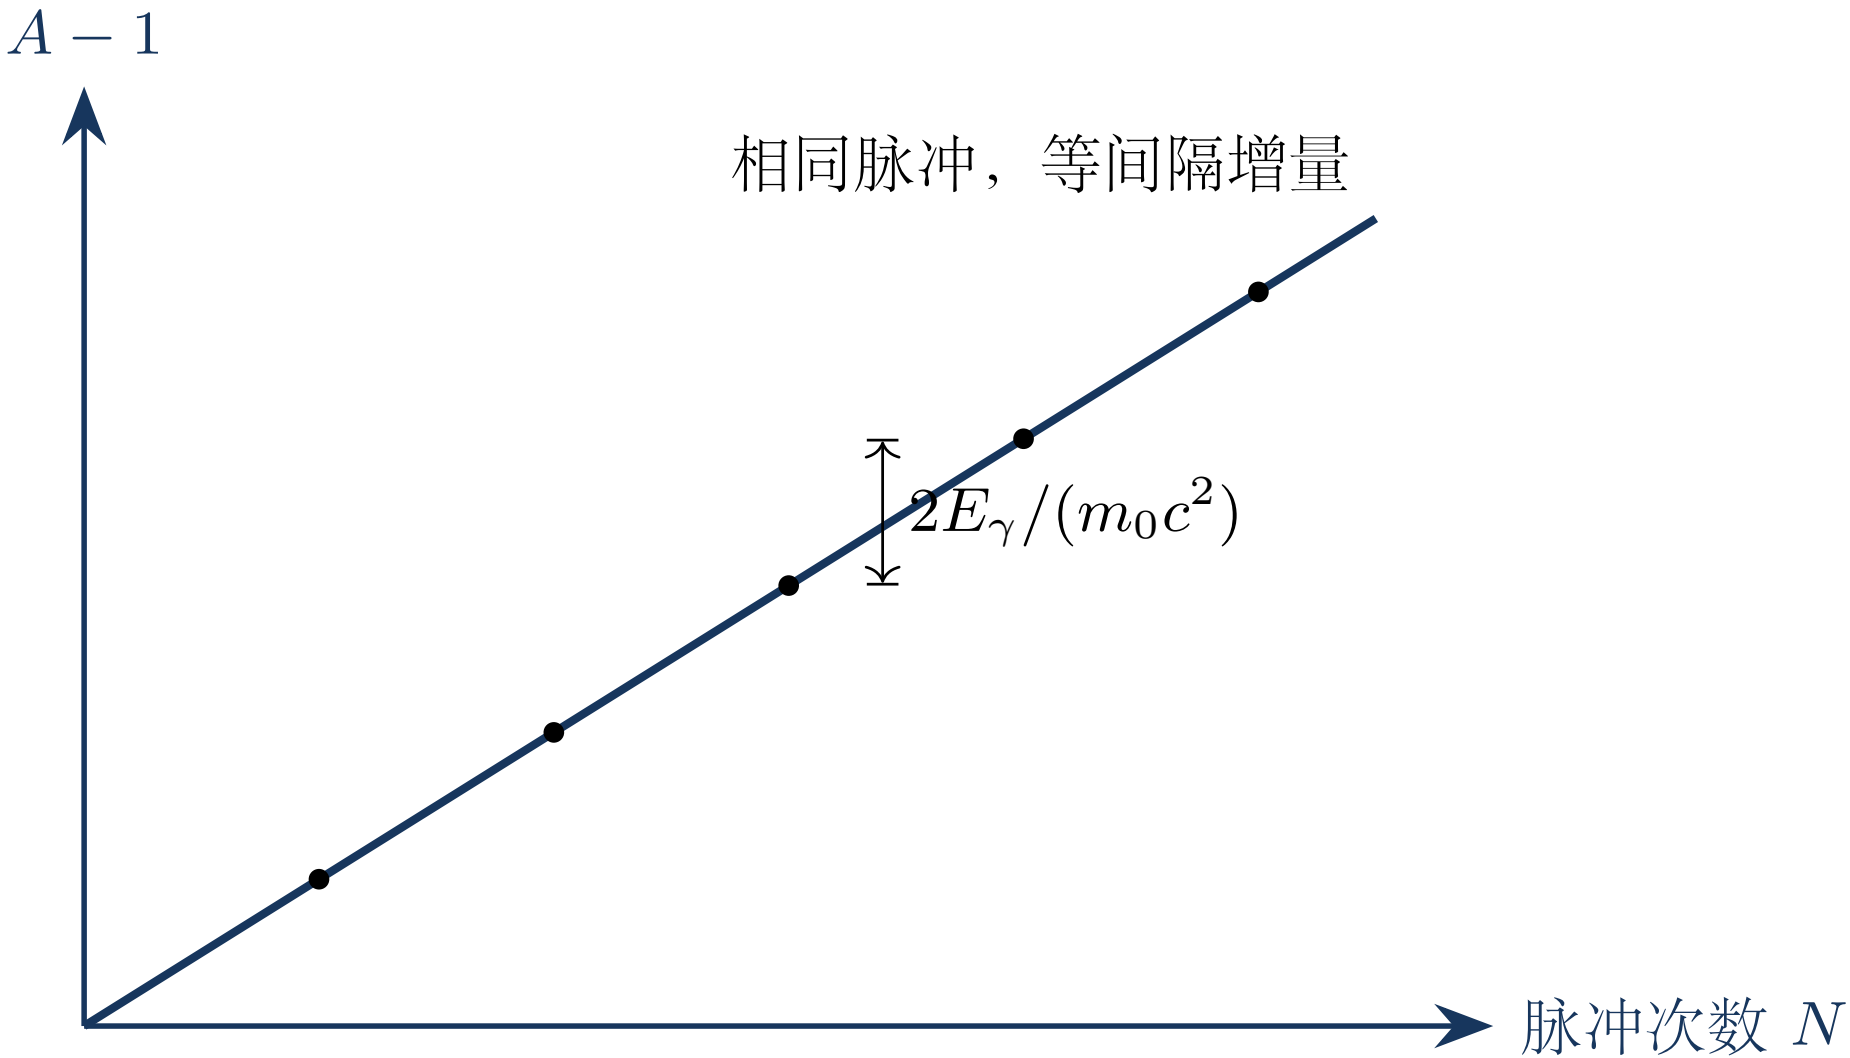
镜面速度 v

镜面速度 0

入射和反射分别作洛伦兹变换



$\delta E = v\,\delta p$，反射光能降低转为镜面能量



$$A=\sqrt{(1+\beta)/(1-\beta)}$$

示意图只显示线性规律，纵轴非实际数值
