
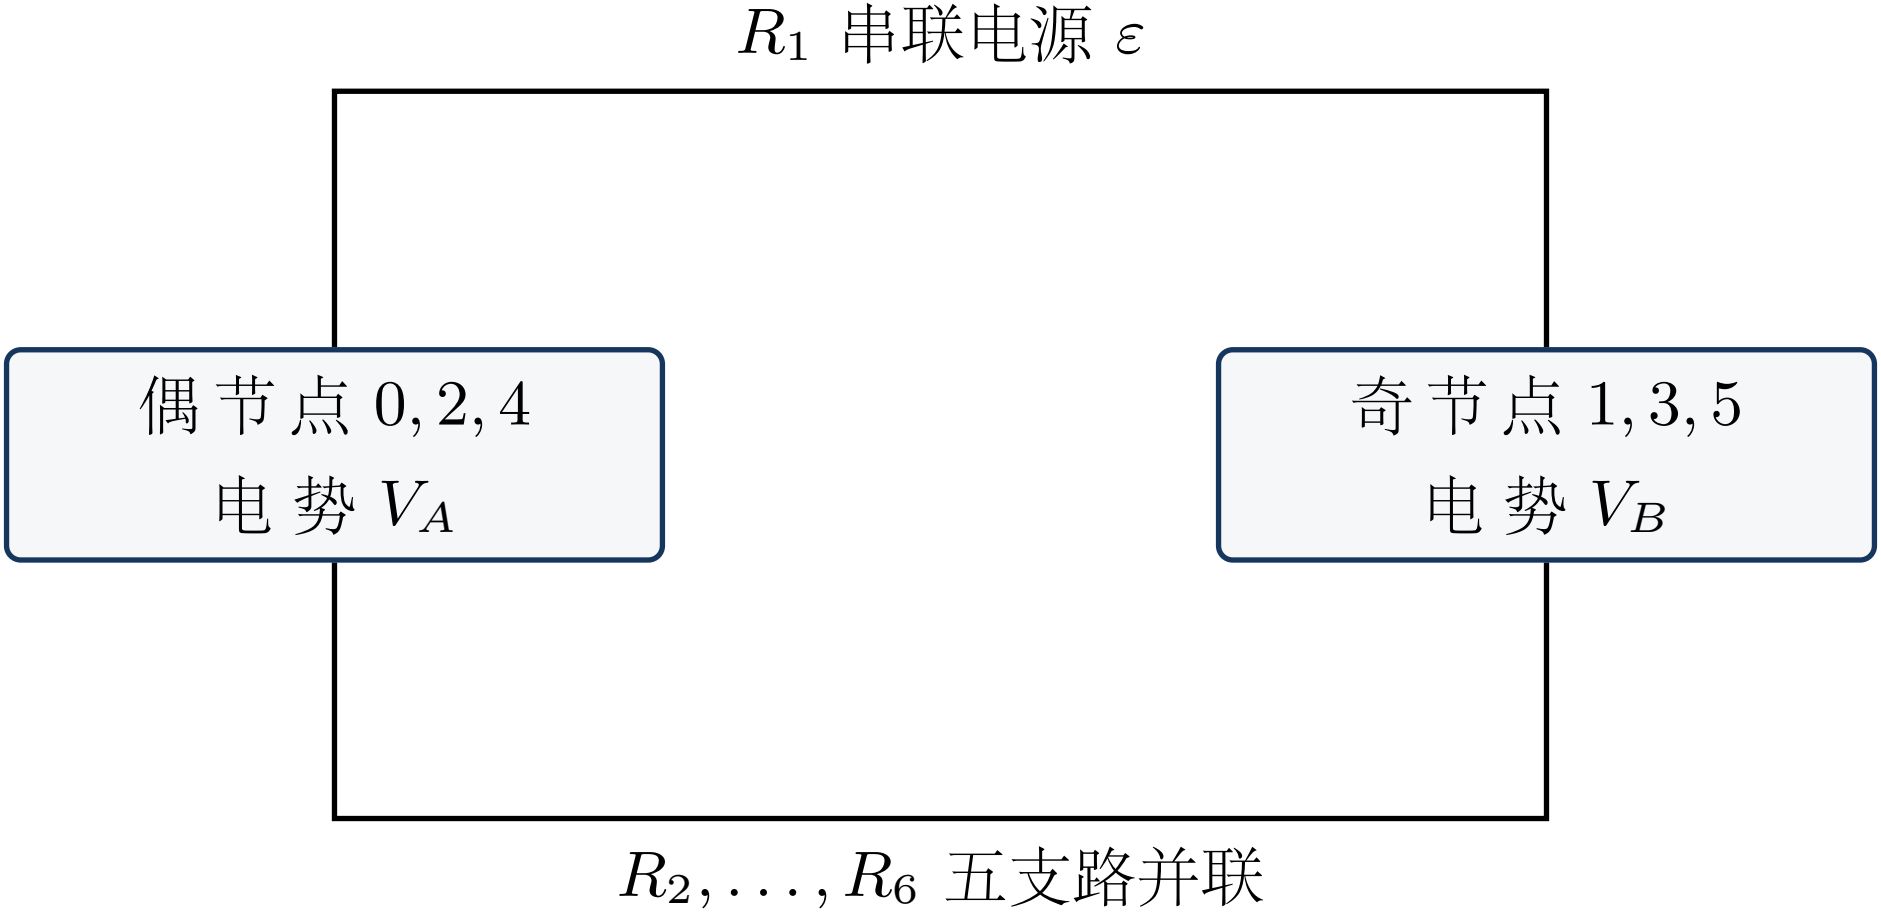
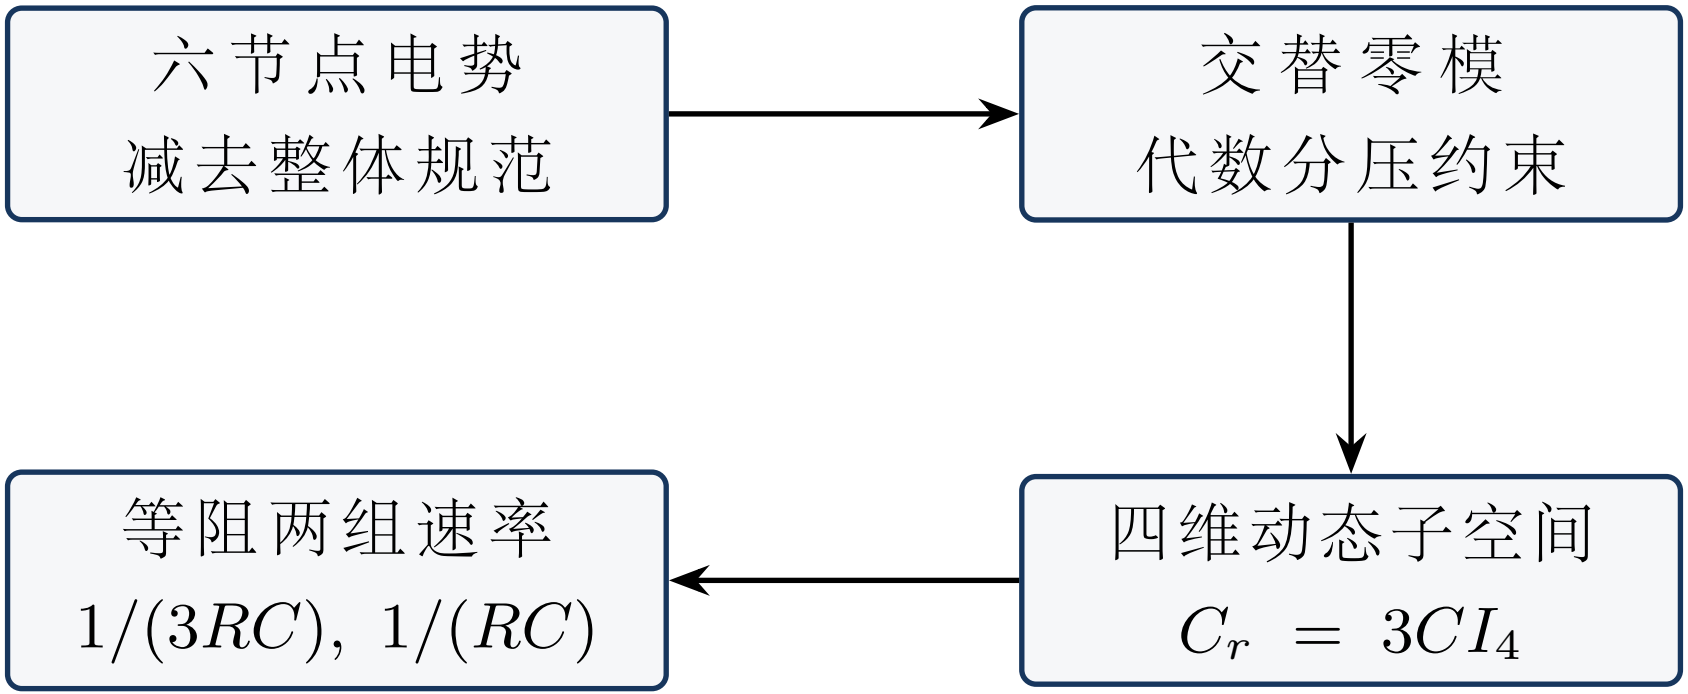
星形六边电容均为 C；仅六个外顶点相连

内部线条交叉处无节点；源串联在 R_1 支路

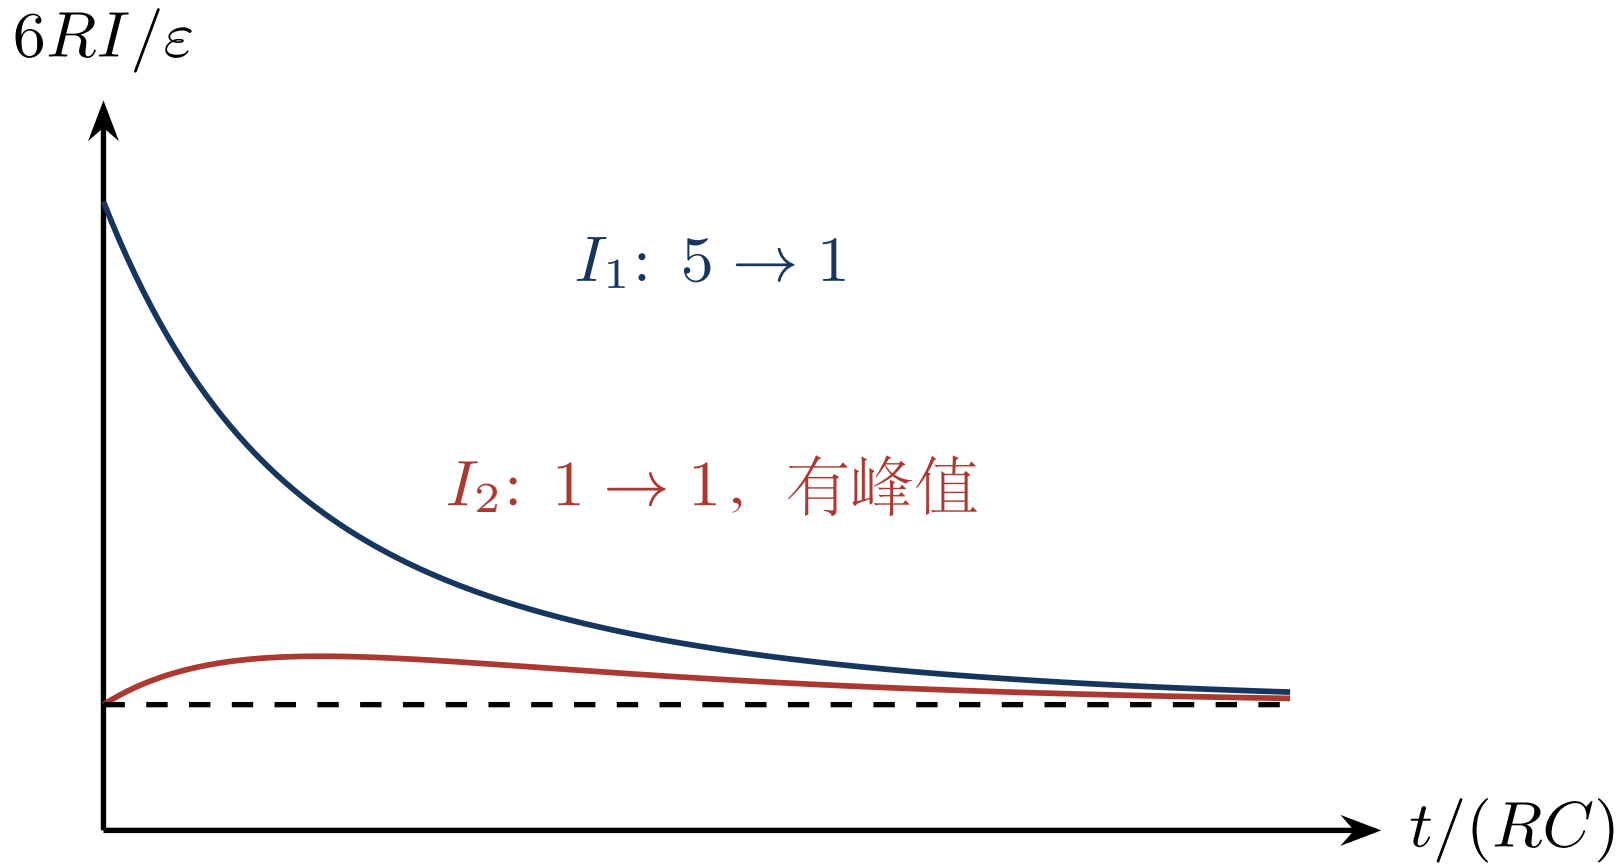


$$U_0 \quad = \quad V_B \; - \; V_A \quad = \quad \varepsilon g_1 / \sum g_j$$

无电荷仅令两个三角形内部等势

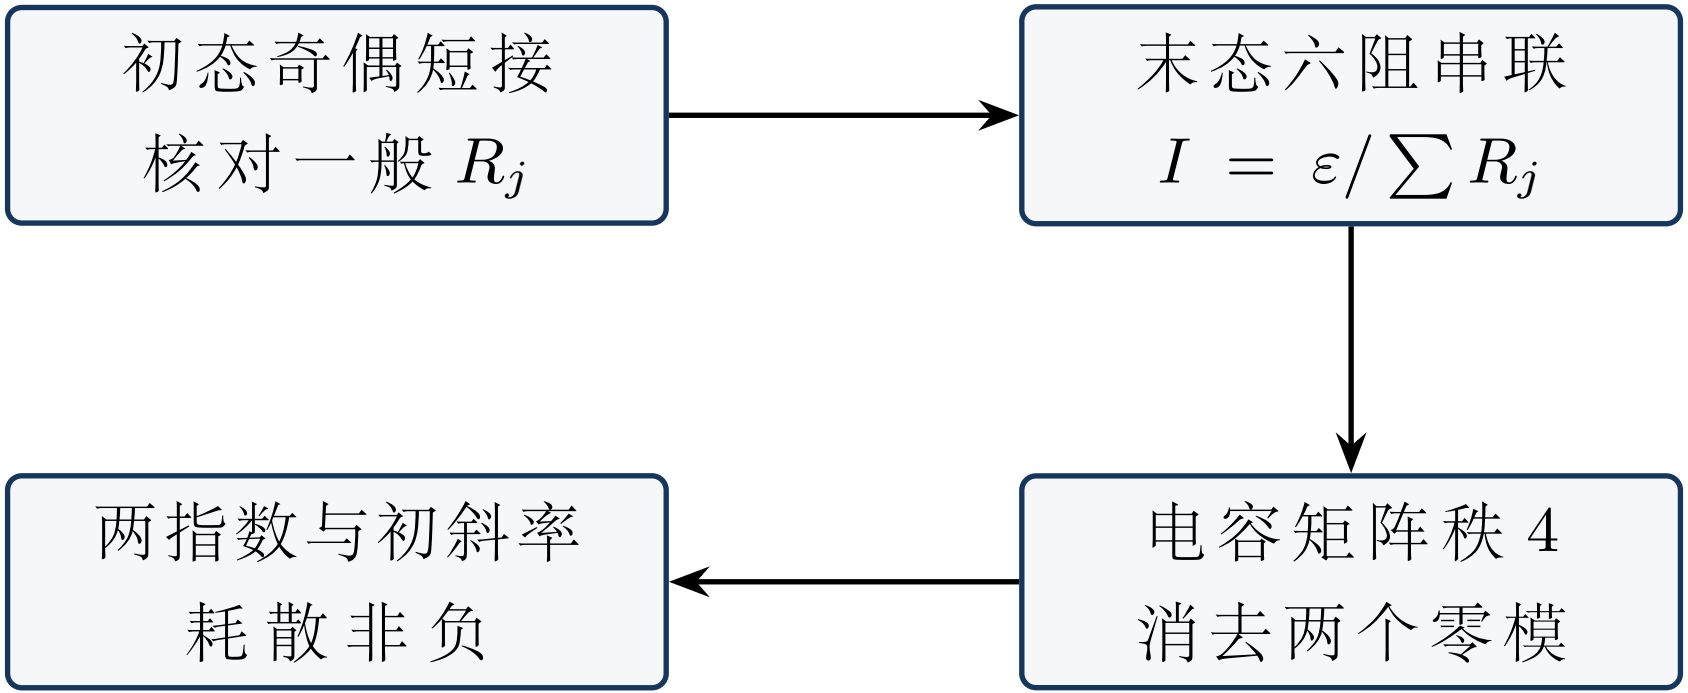


$q = \pi$ 的电容特征值为零，不对应指数衰减



$$I_{2,\max}/I_2(\infty) \quad = \quad 1 \ + \ 2/(3\sqrt{3})$$

峰值时间 $3RC \ln 3/2$



一般电阻响应保留四维矩阵指数；等阻单列显式公式
