
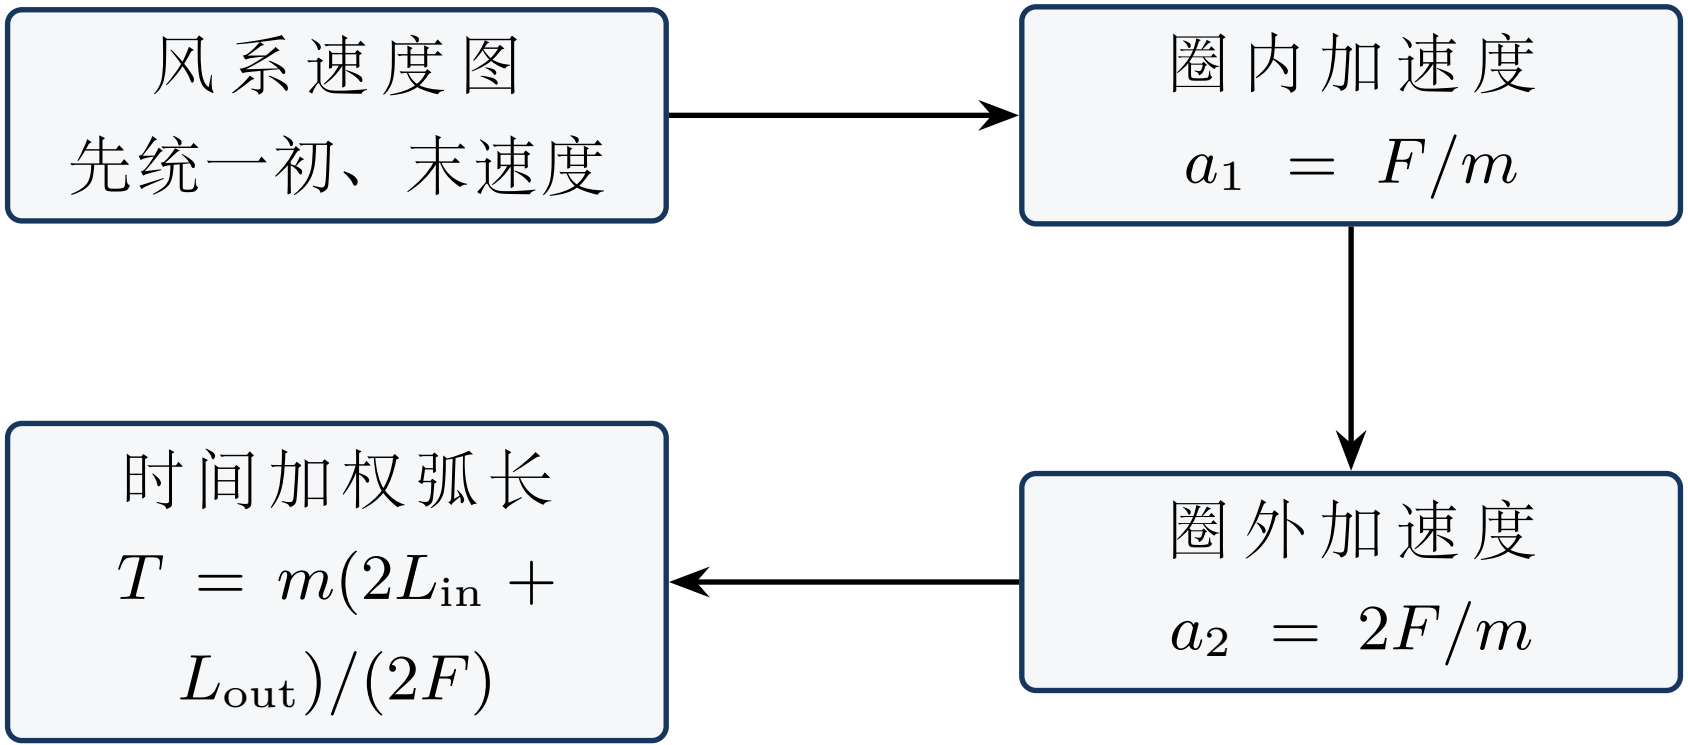
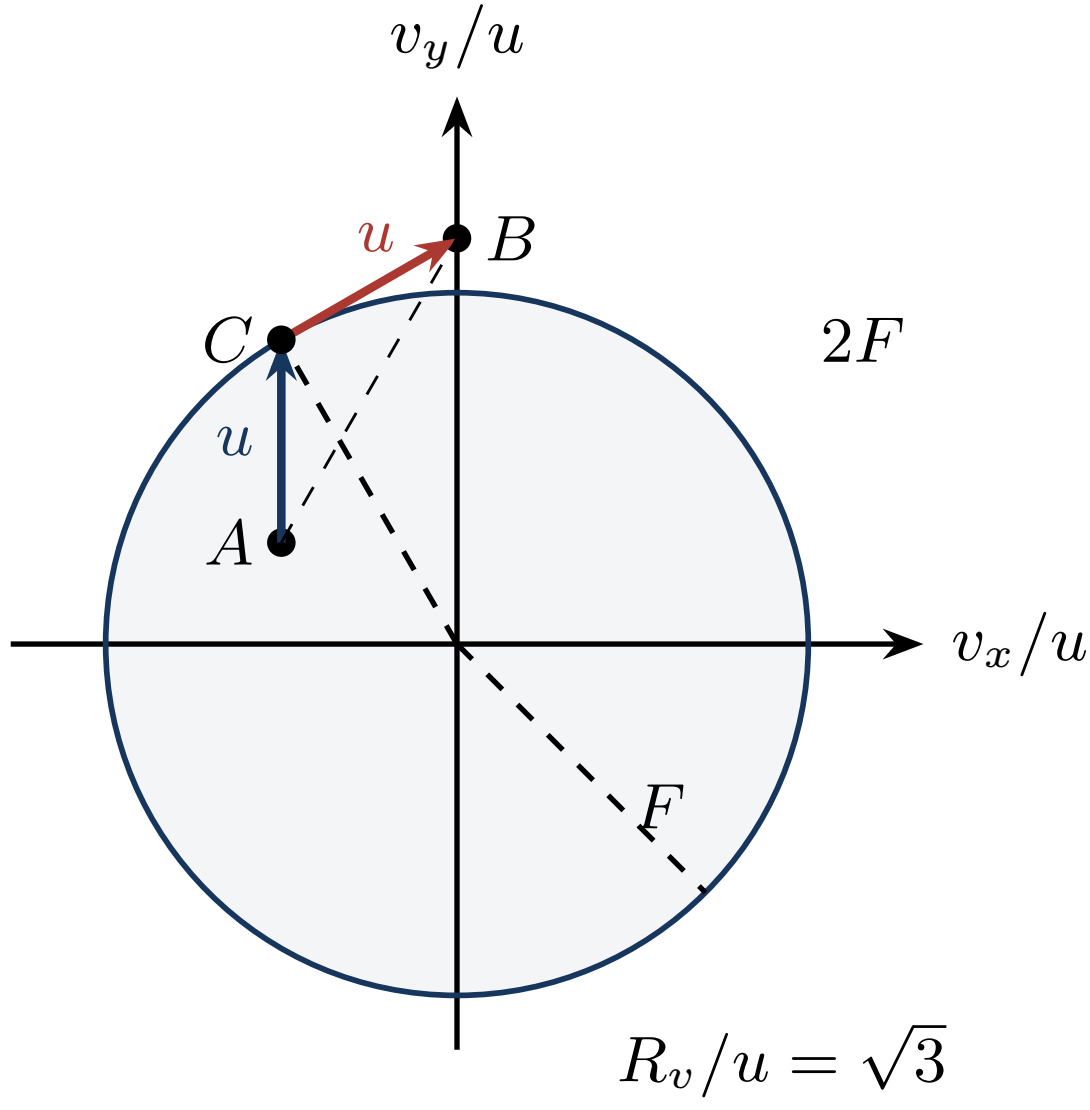
$A = (-\sqrt{3}/2, 1/2)$，$B = (0, 2)$

初速在圆内，末速在圆外

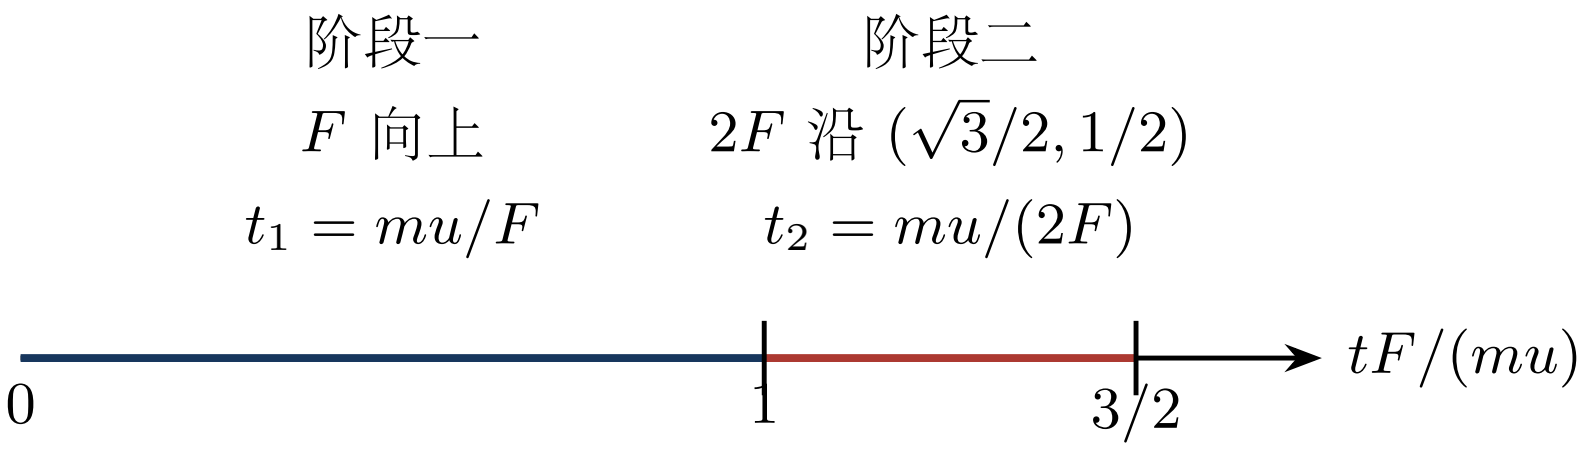


速度弧长除以加速度才是时间

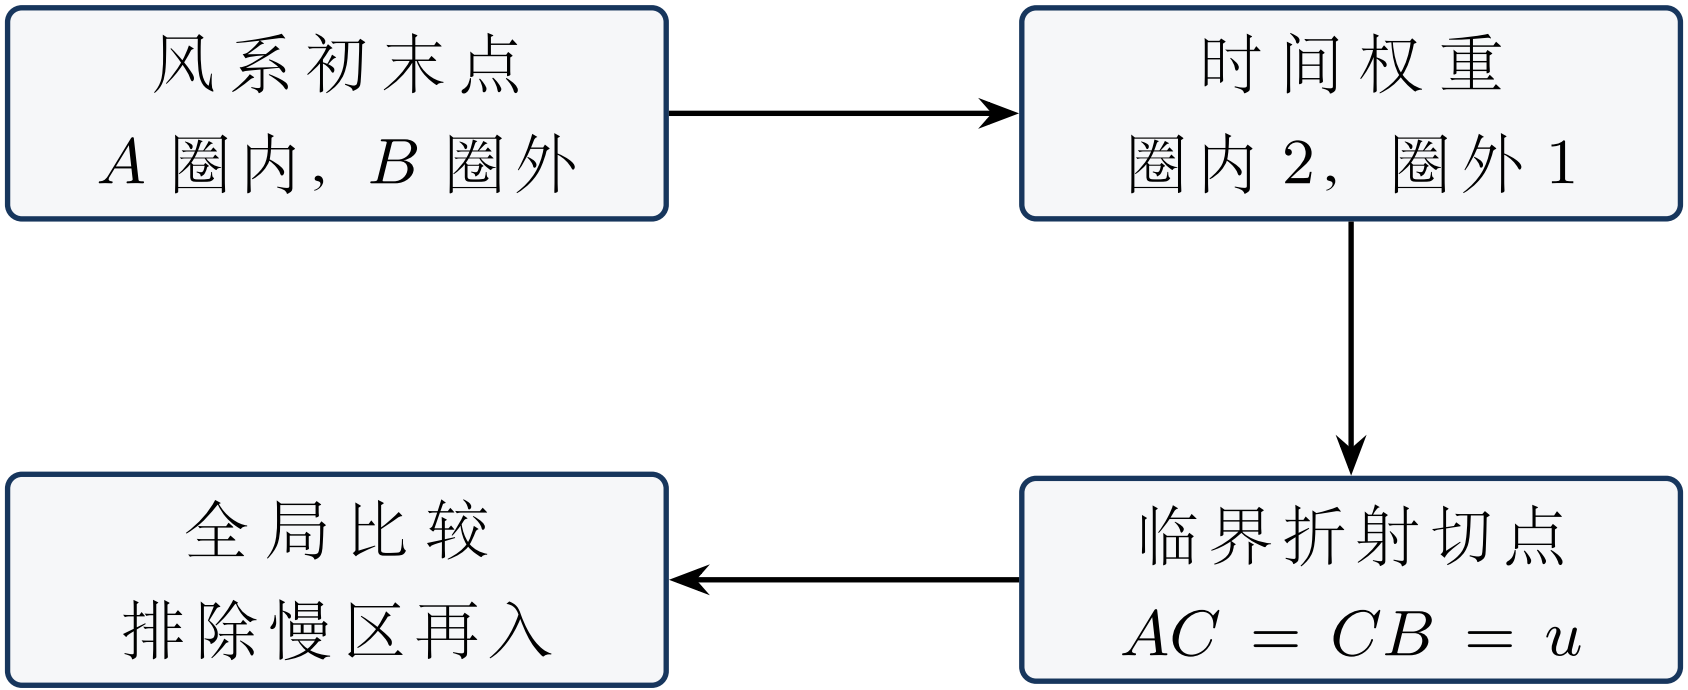


$$AC \quad \| \quad v_y\,, \; OC \quad \perp \quad CB$$

入射 30°、出射 90°：$2\sin i \quad = \quad \sin o$



过界时速度连续，推力大小与方向均可切换



$T_{\min} = 3mu/(2F)$，直达时间系数约 1.5731
