
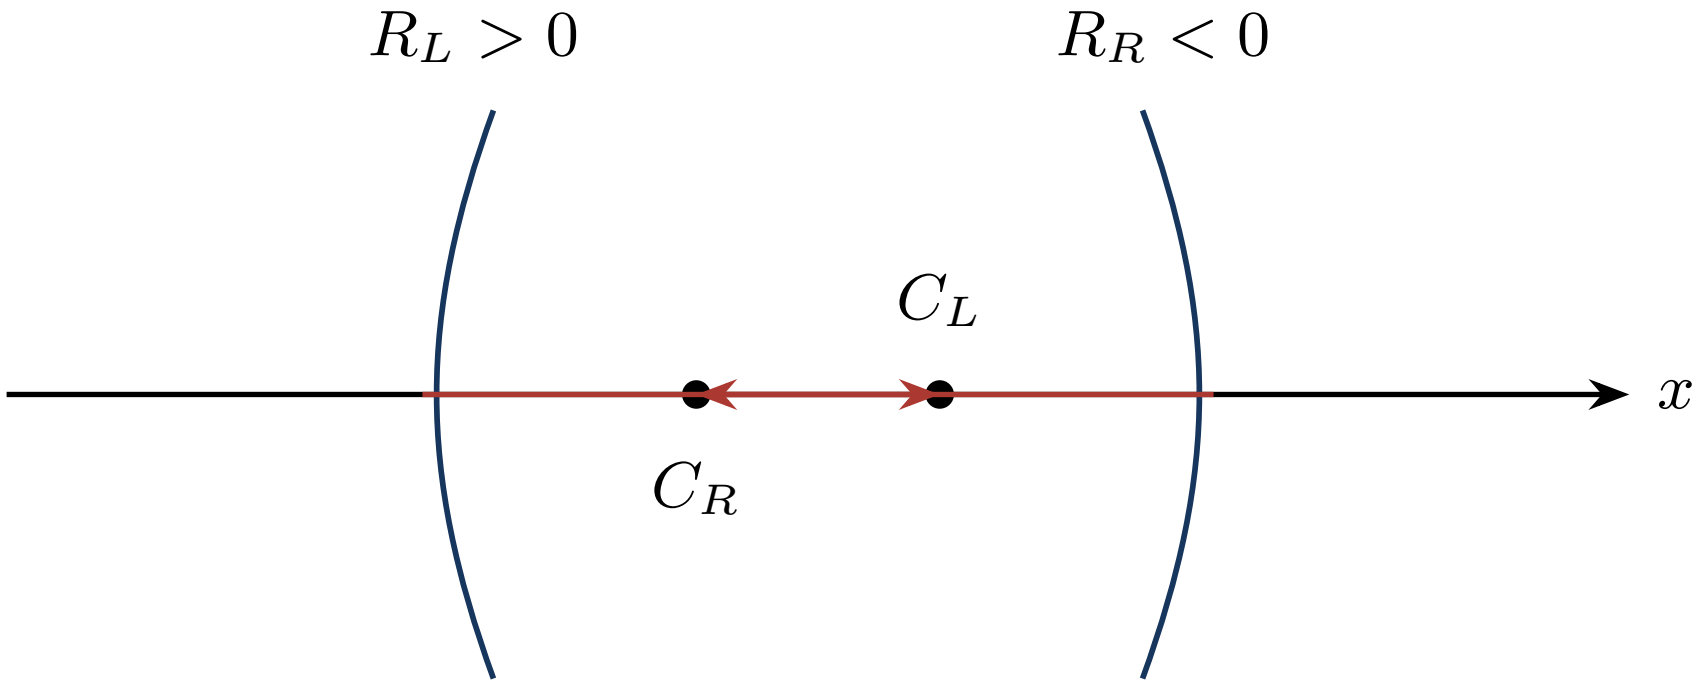
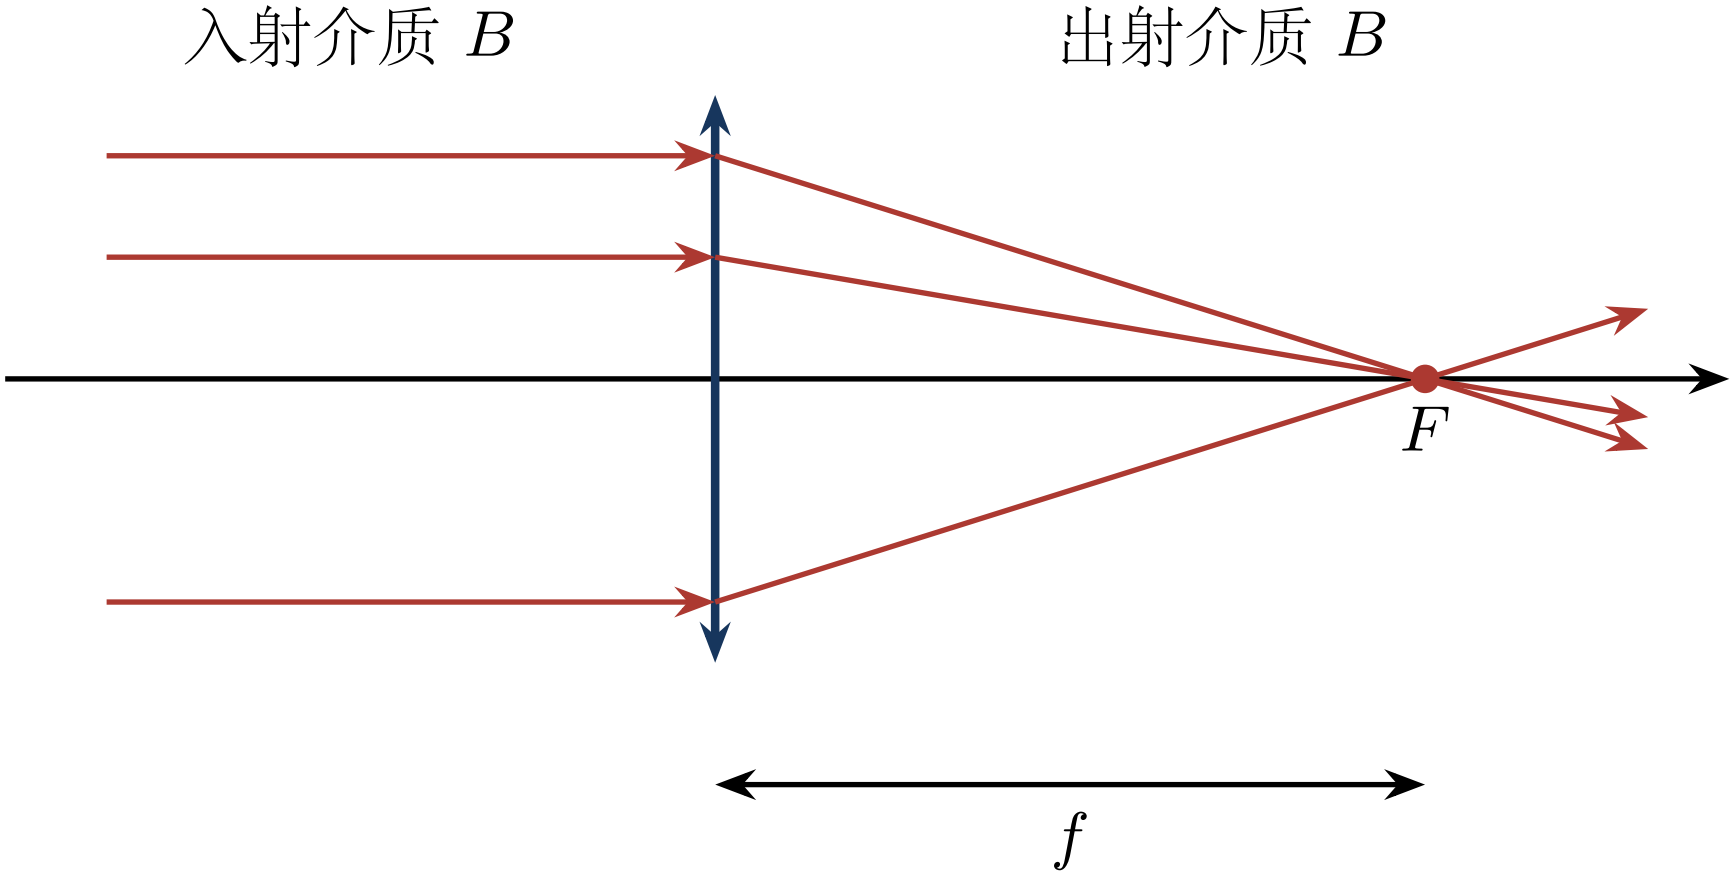
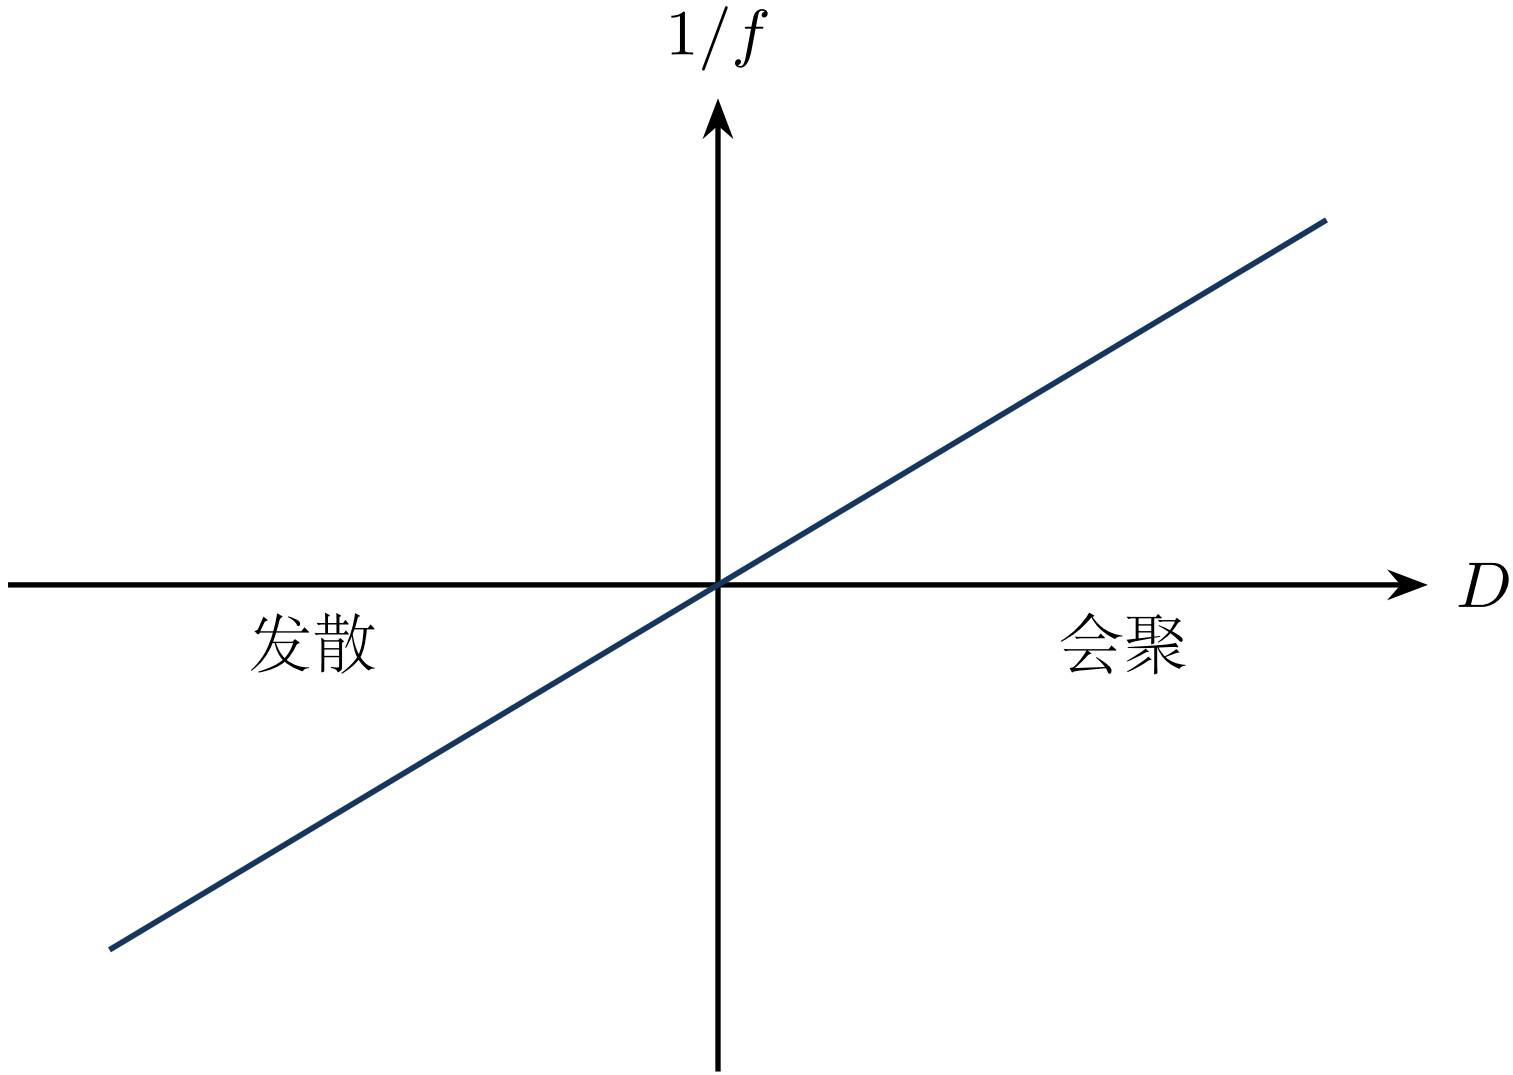
示意双凸状态：$p_A > p_L, p_R$；图面外曲率忽略



$$1/R_L = (p_A - p_L)/\sigma$$
$$1/R_R = -(p_A - p_R)/\sigma$$

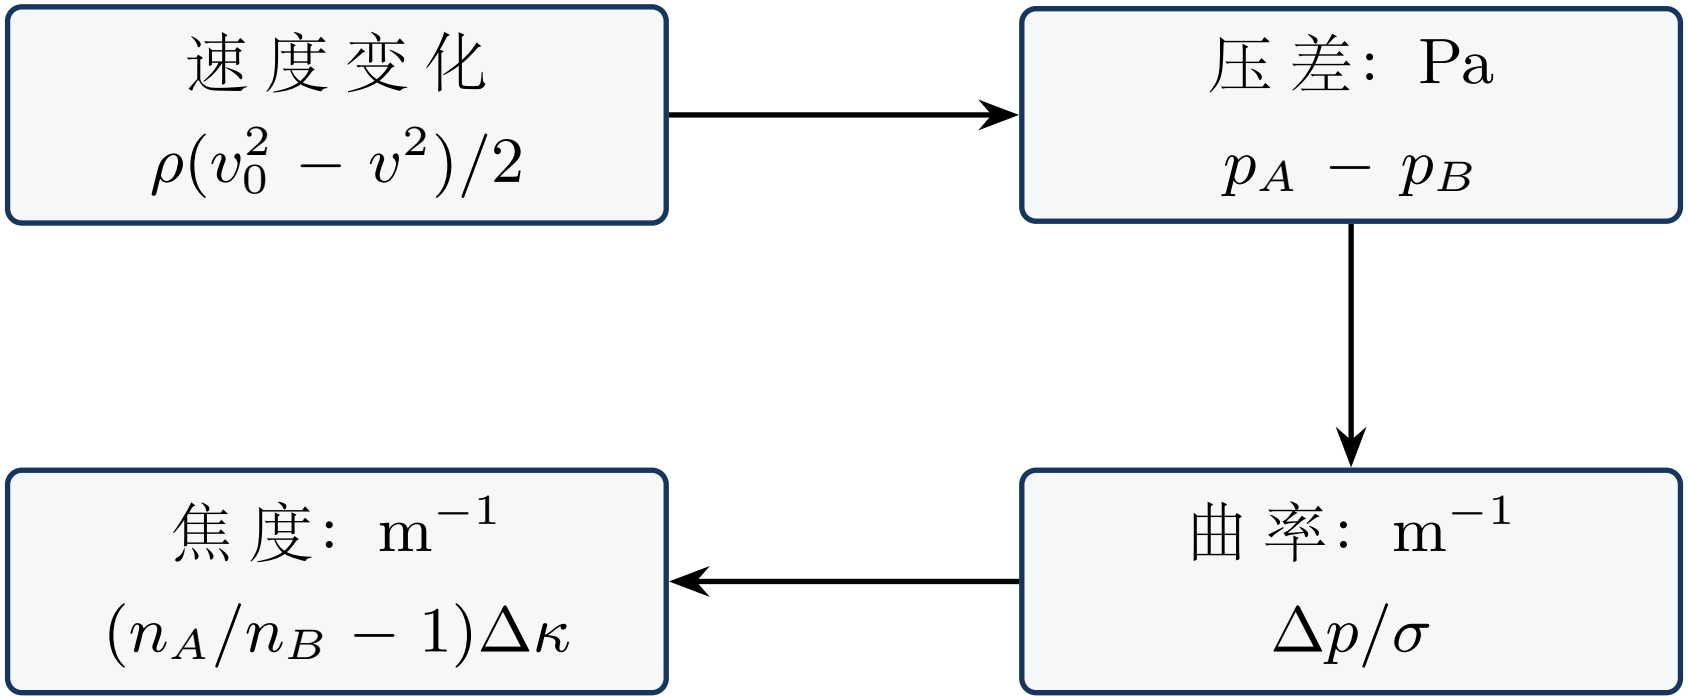


$$1/f \quad = \quad (n_A/n_B \; - \; 1)(1/R_L \; - \; 1/R_R)$$



$$D = 2p_A - p_L - p_R$$

$$1/f = (n_A - n_B)D/(n_B\sigma)$$



σ 的单位为 N/m；三维界面还需另一主曲率
