
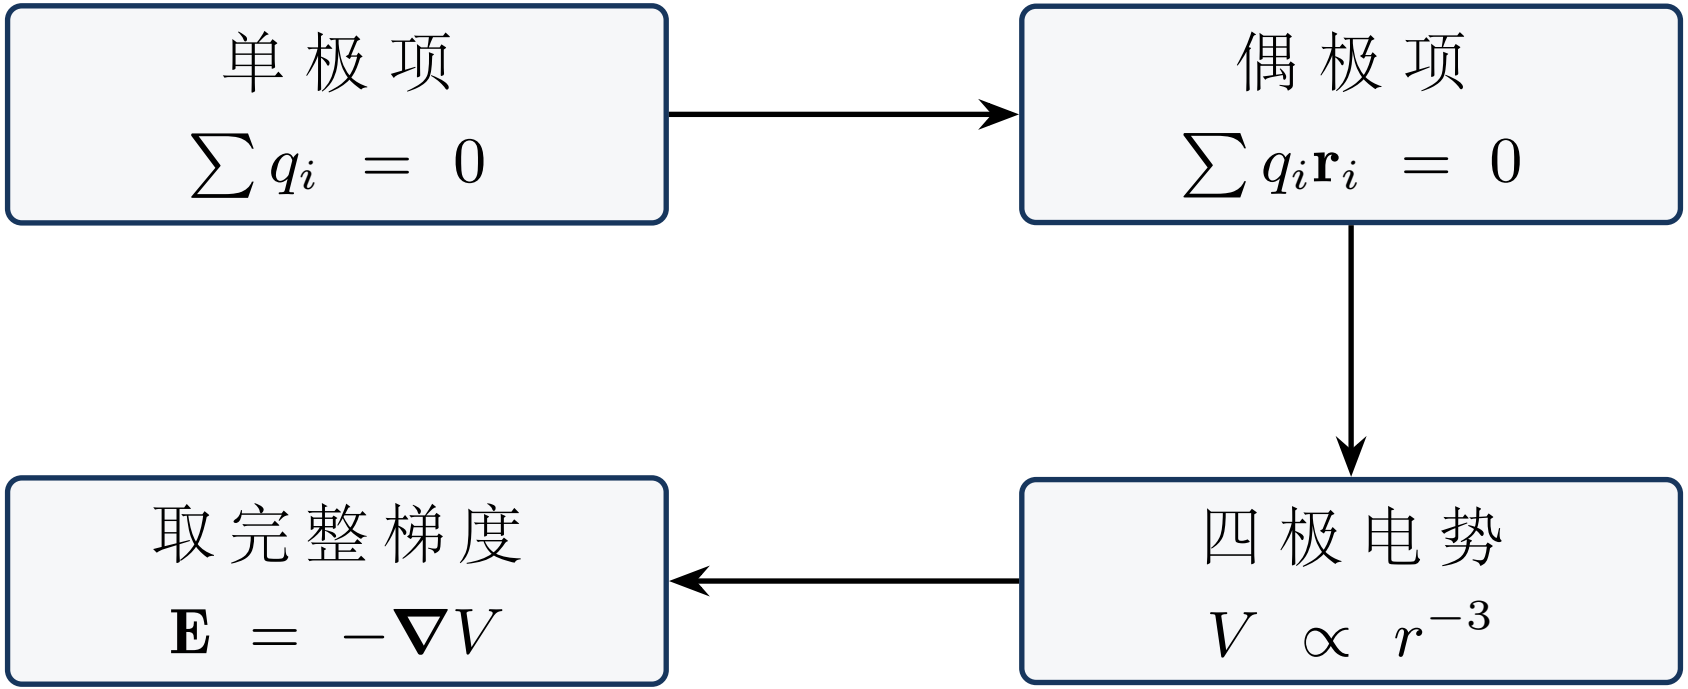
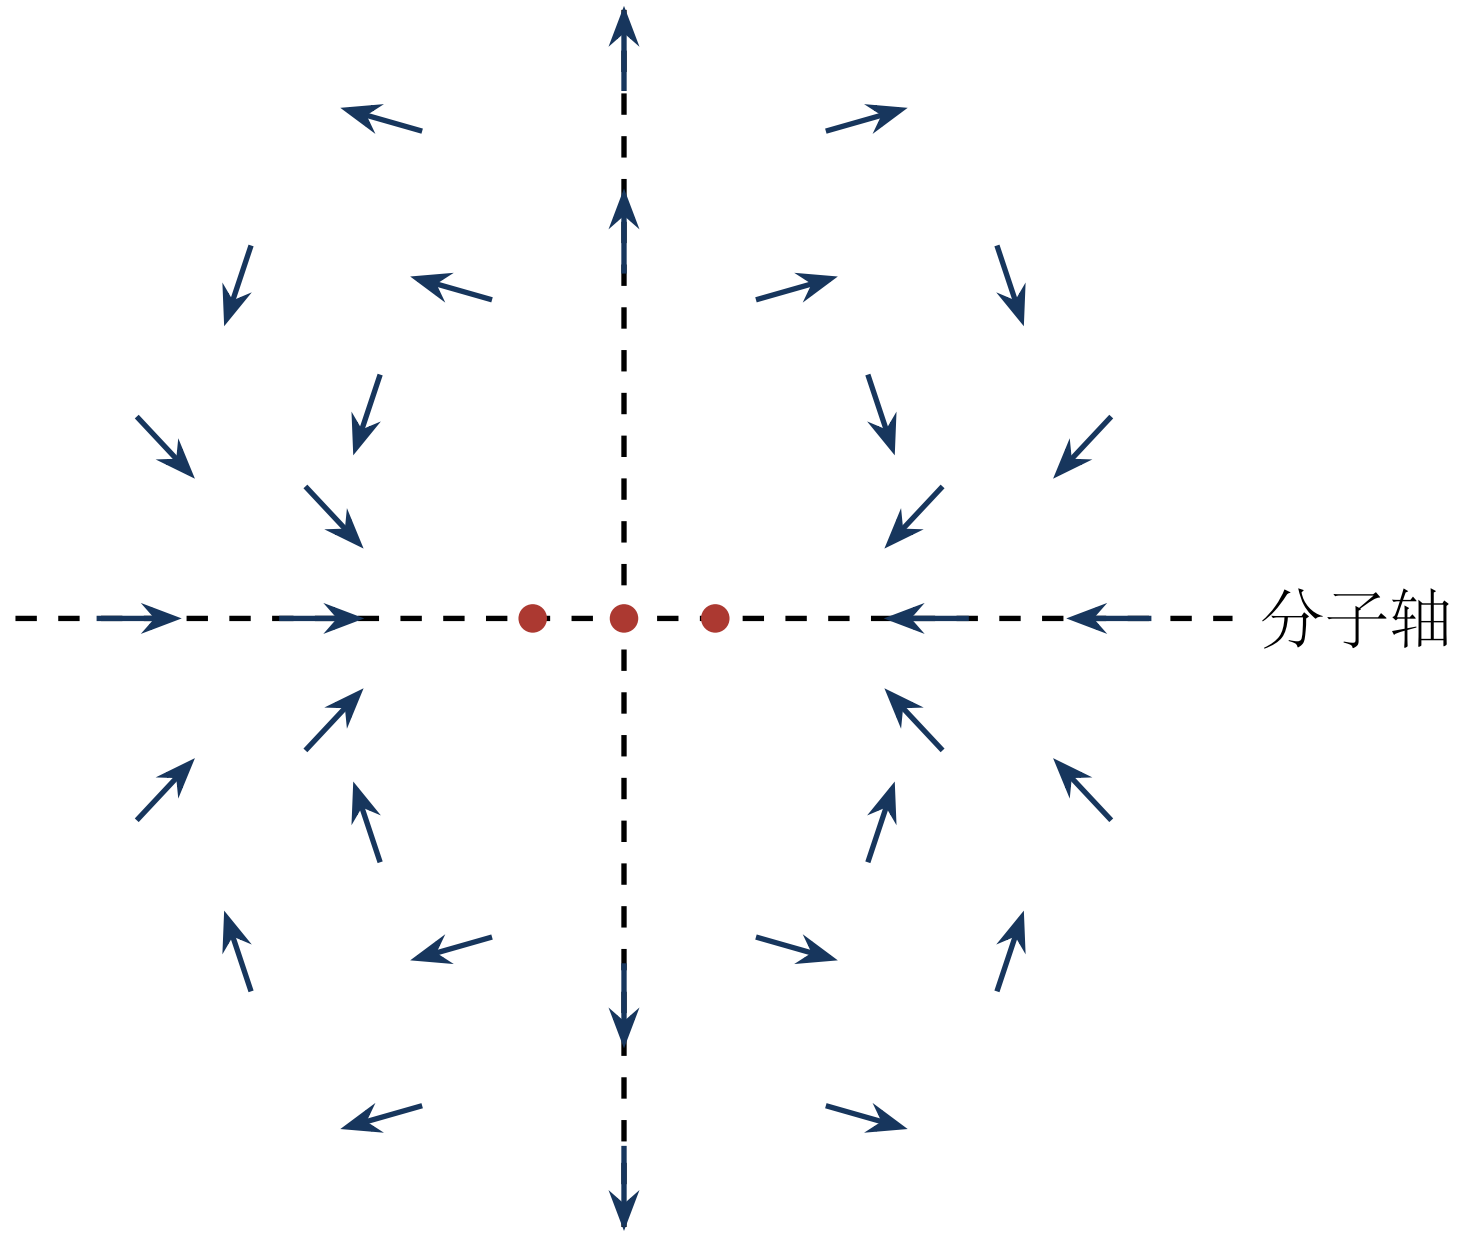
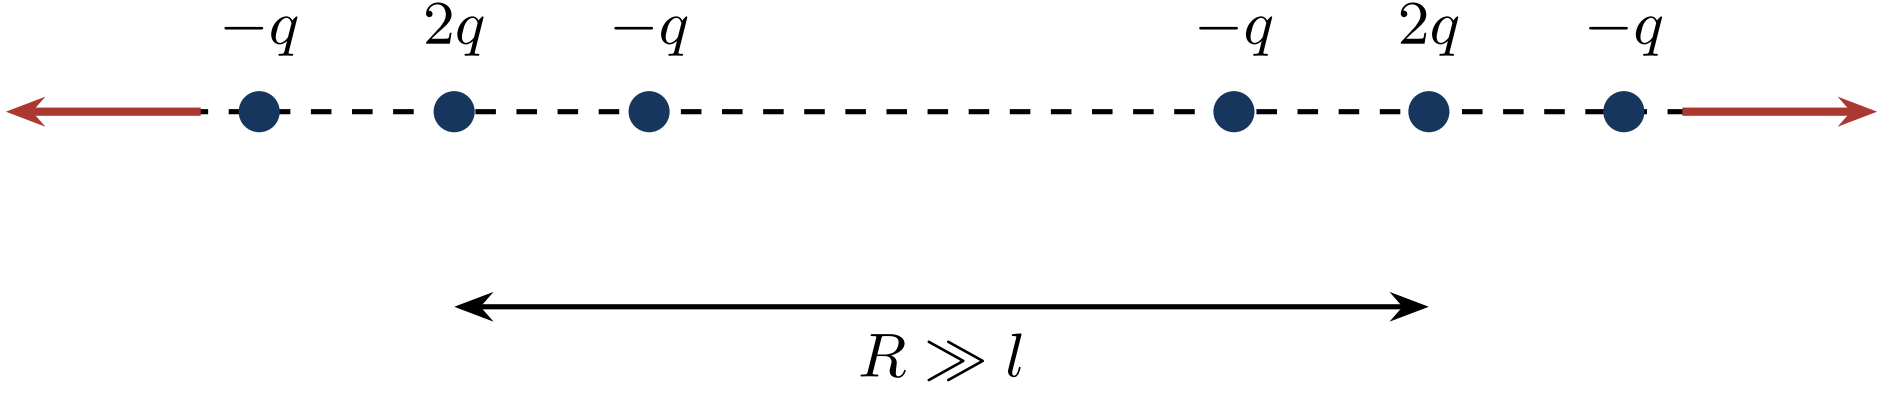
$Q_{\text{net}} = 0$，$\mathbf{p} = 0$，四极项不为零



左右对称使奇数阶项消失；余项从 l^4/r^5 起

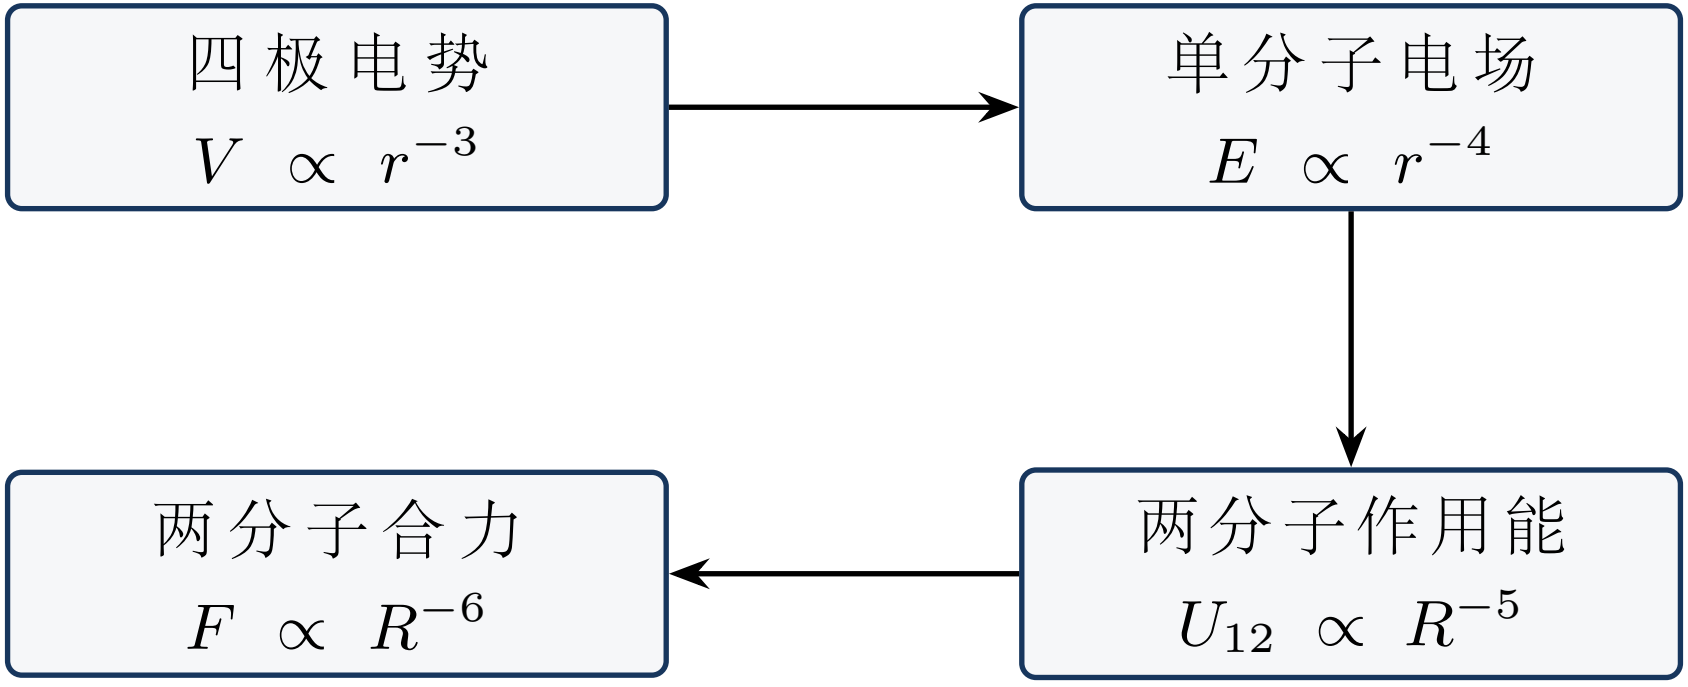


箭头仅示方向，长度统一；轴向向内、中垂面向外



$$U_{12} = 2qV(R) - qV(R-l) - qV(R+l)$$

$$U_{12} \simeq 24kq^2l^4/R^5 > 0$$，共轴排列主阶排斥



第二分子的中性与对称性再次抵消低阶项；固定共轴方向
