
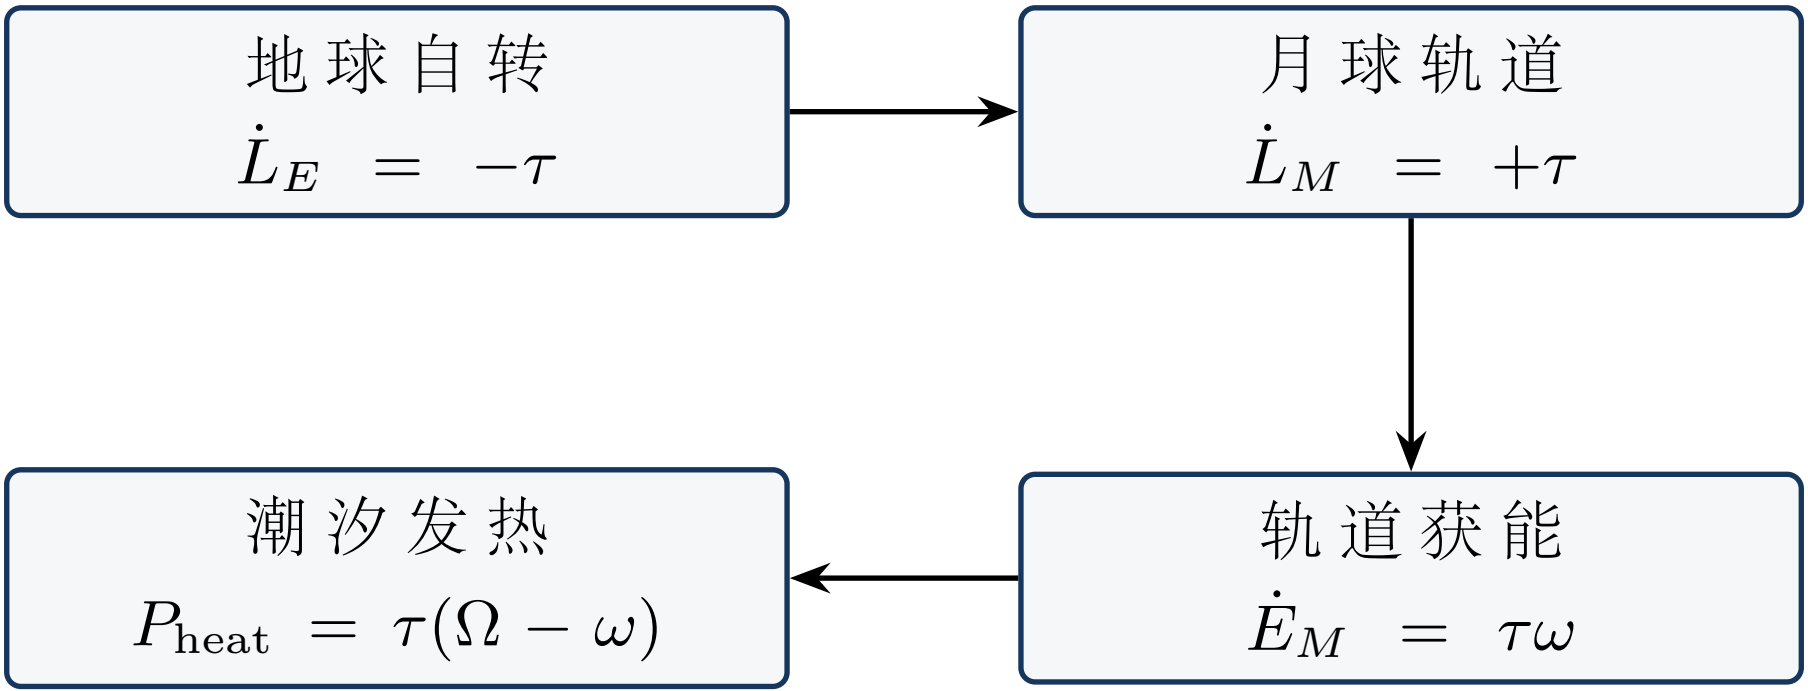
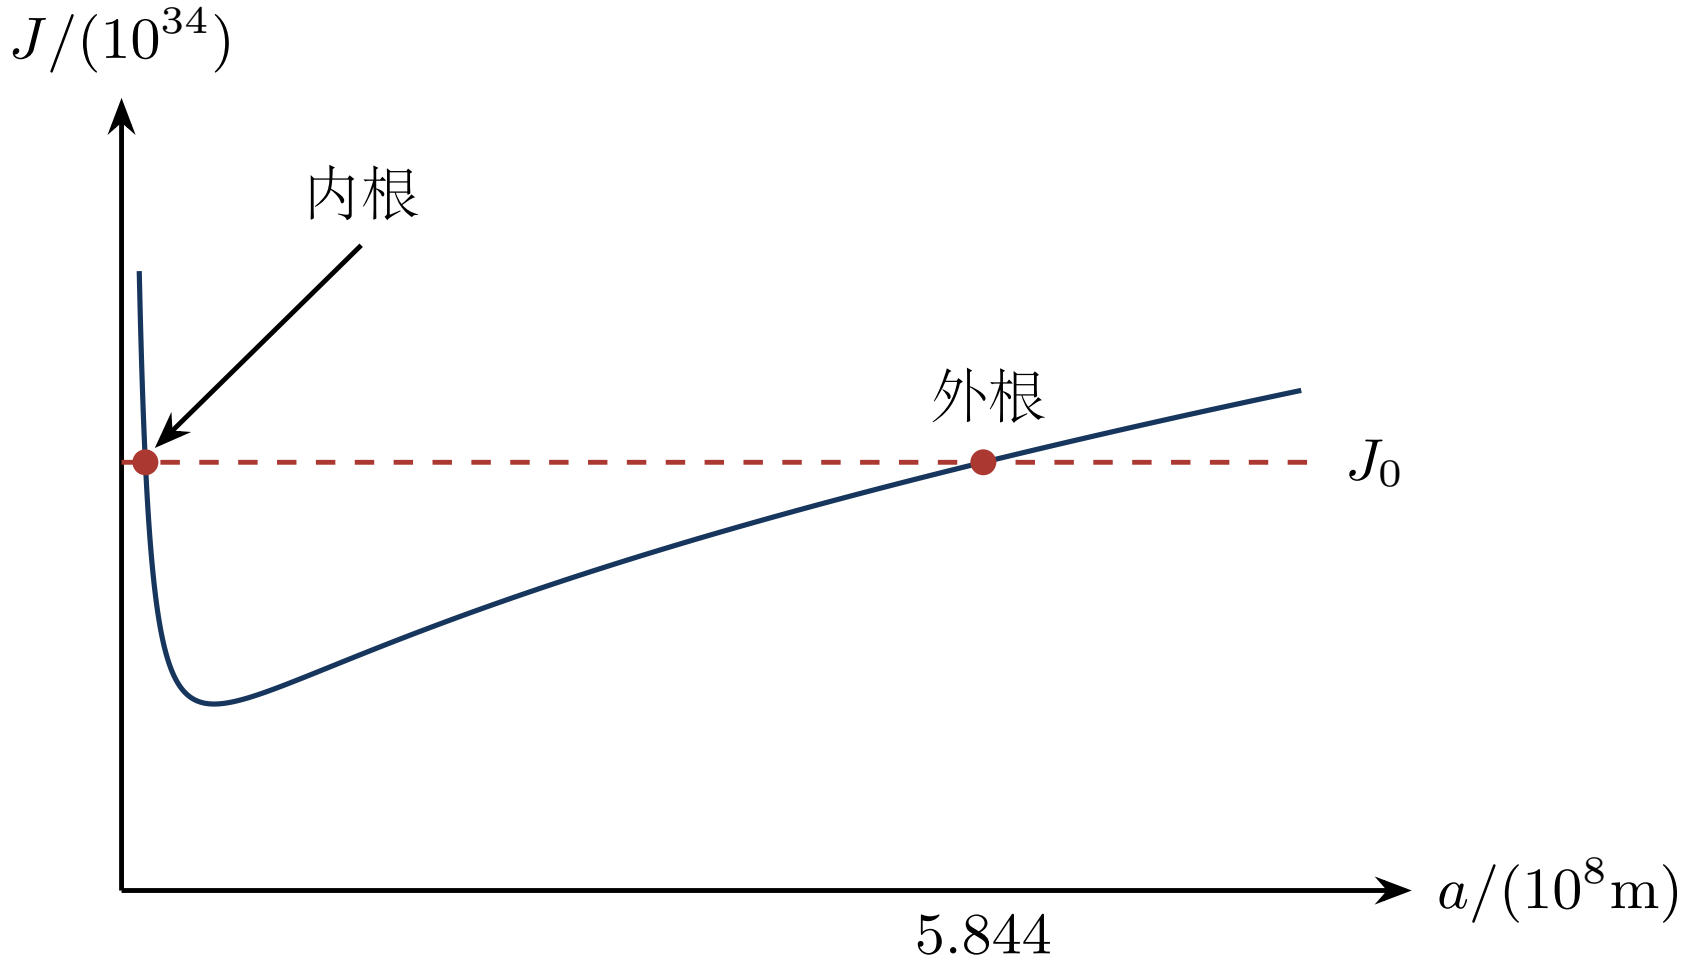
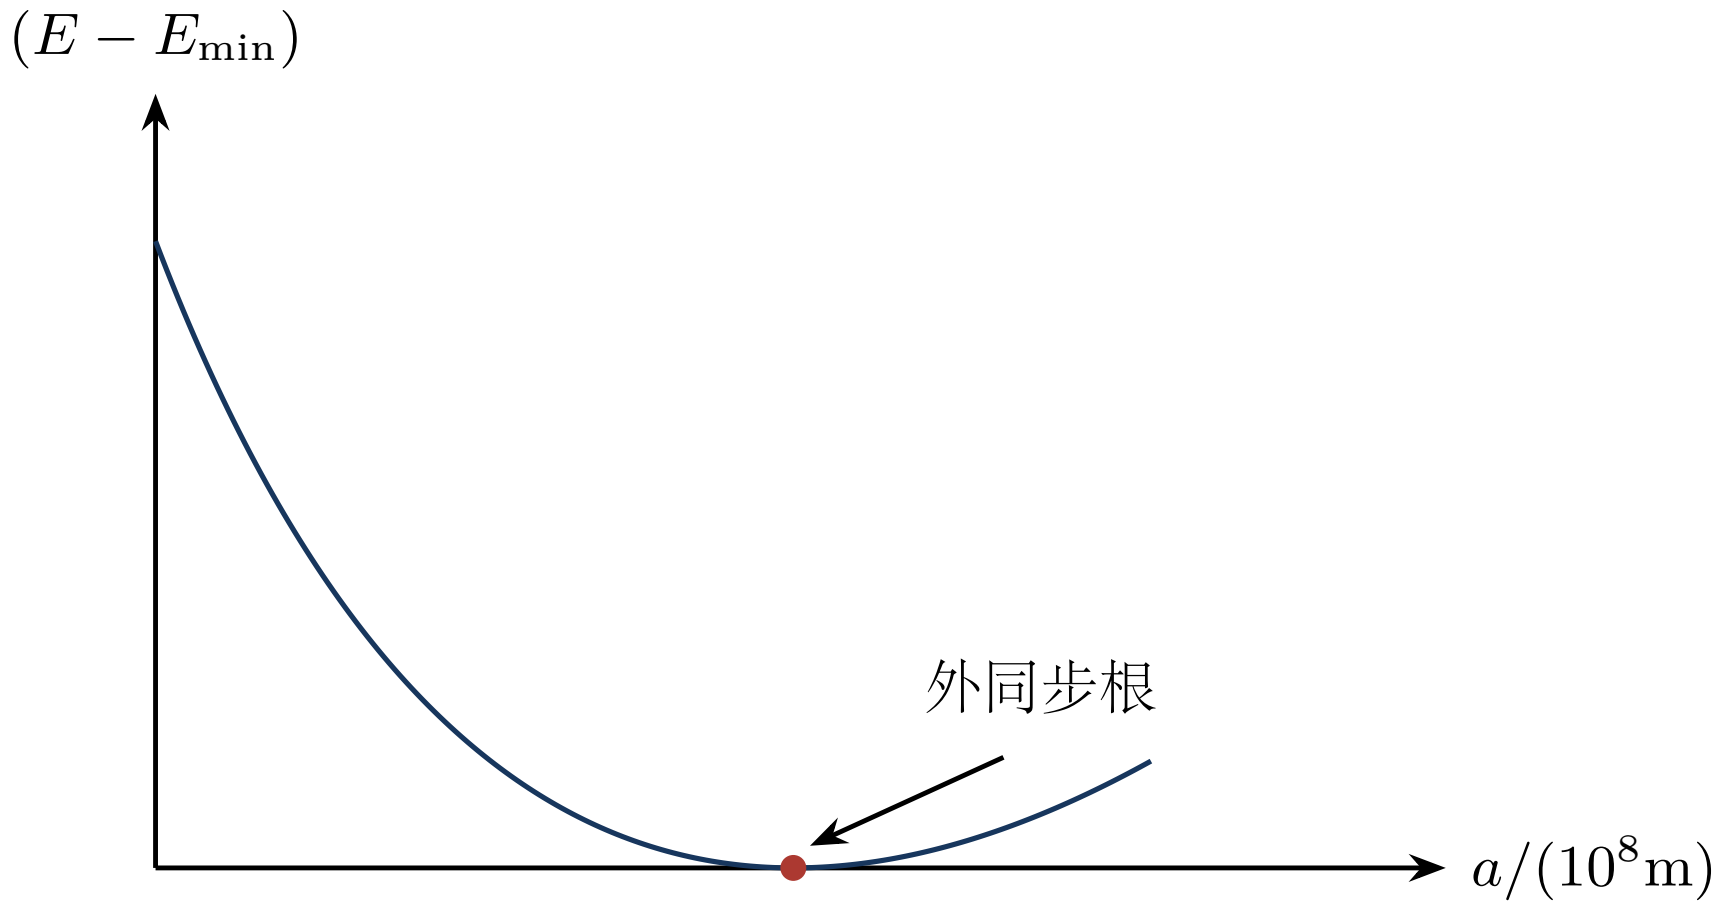
隆起领先地月连线；地球失去自转角动量，月球轨道获得角动量



孤立模型总角动量守恒；机械能下降

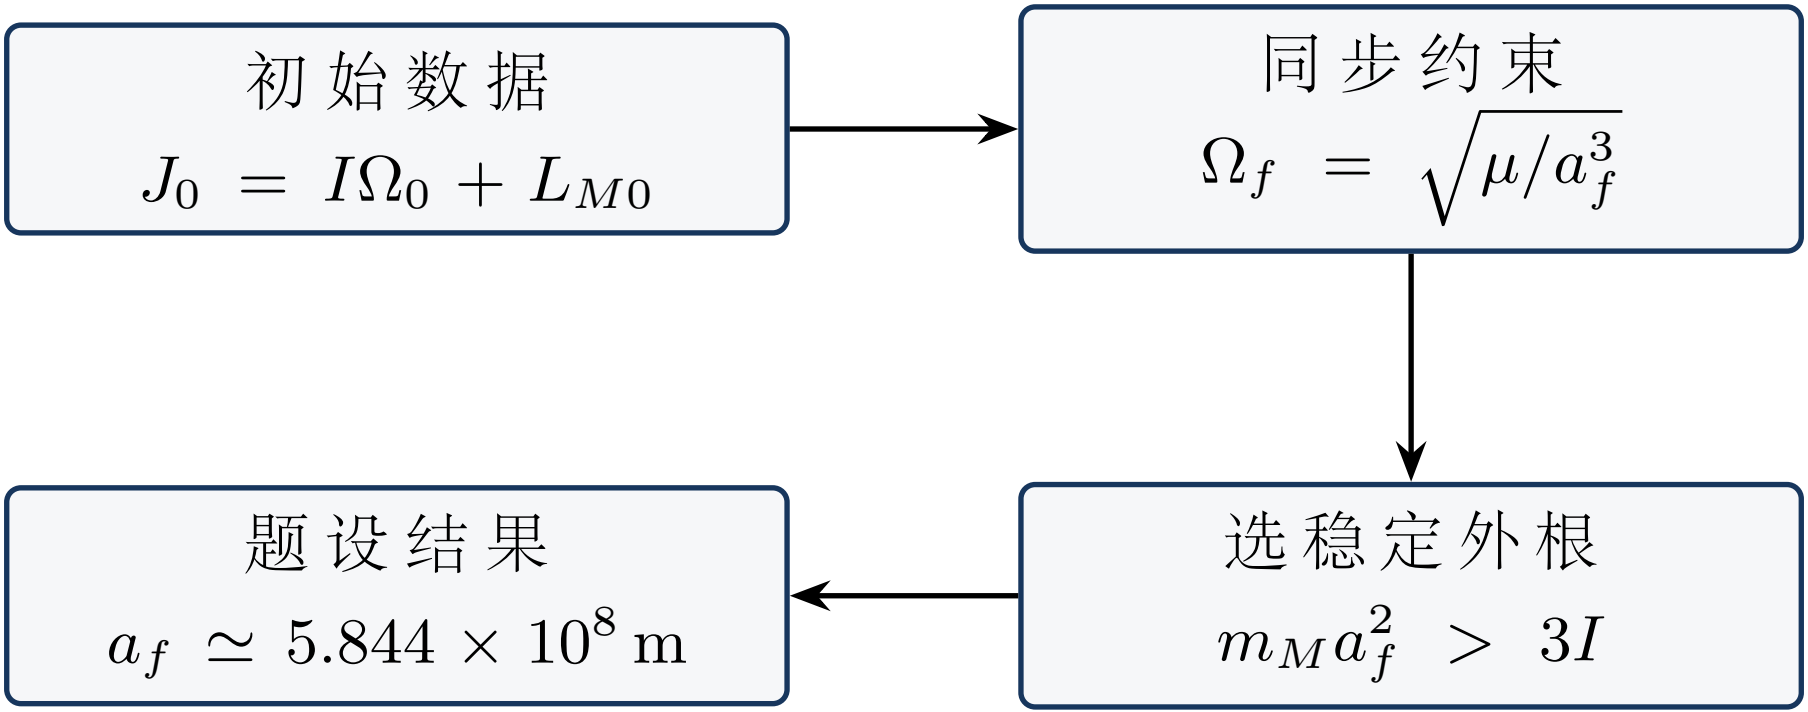


$J_s(a)$ 有极小值；当前总角动量与曲线相交两次



固定 J 的外根是能量极小值：$m_M a^2 > 3I$

横轴范围为 2 至 8 × 10^8 m；纵轴已归一化



数值补充采用初始地球自转周期 24 小时
