
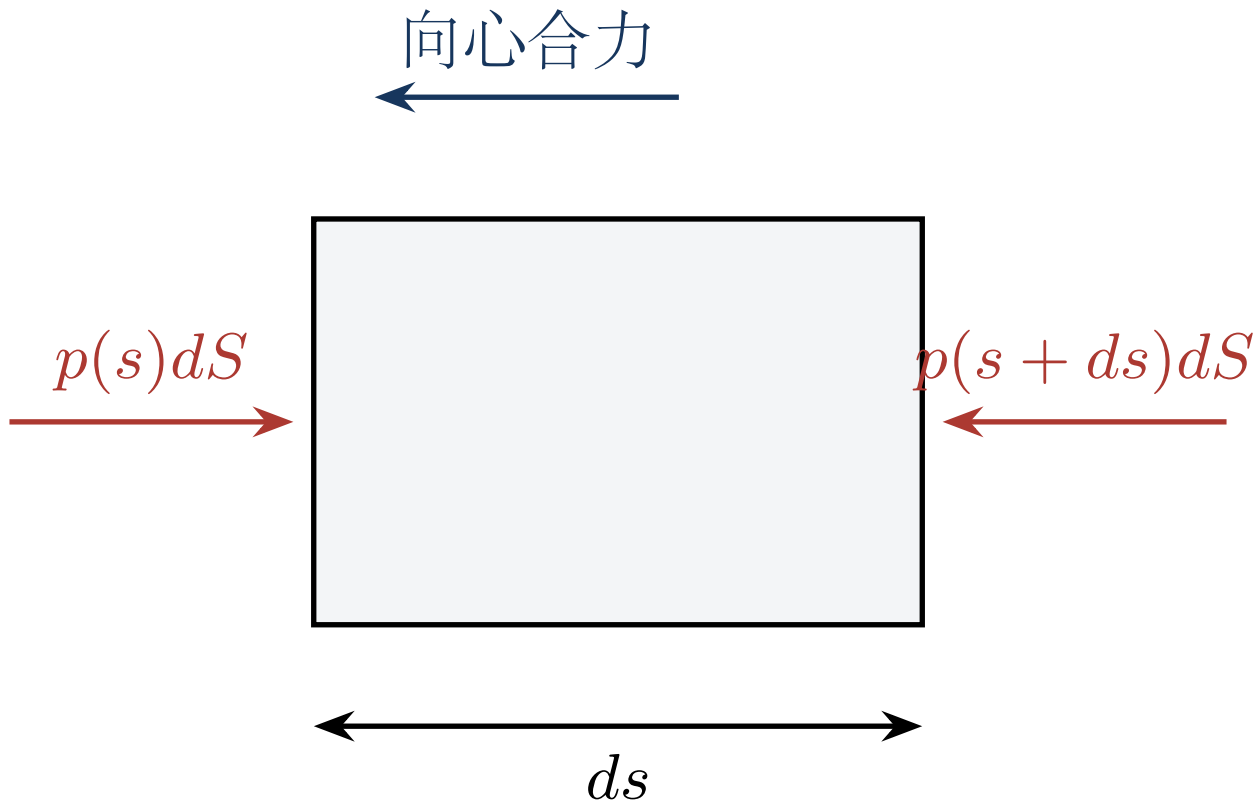
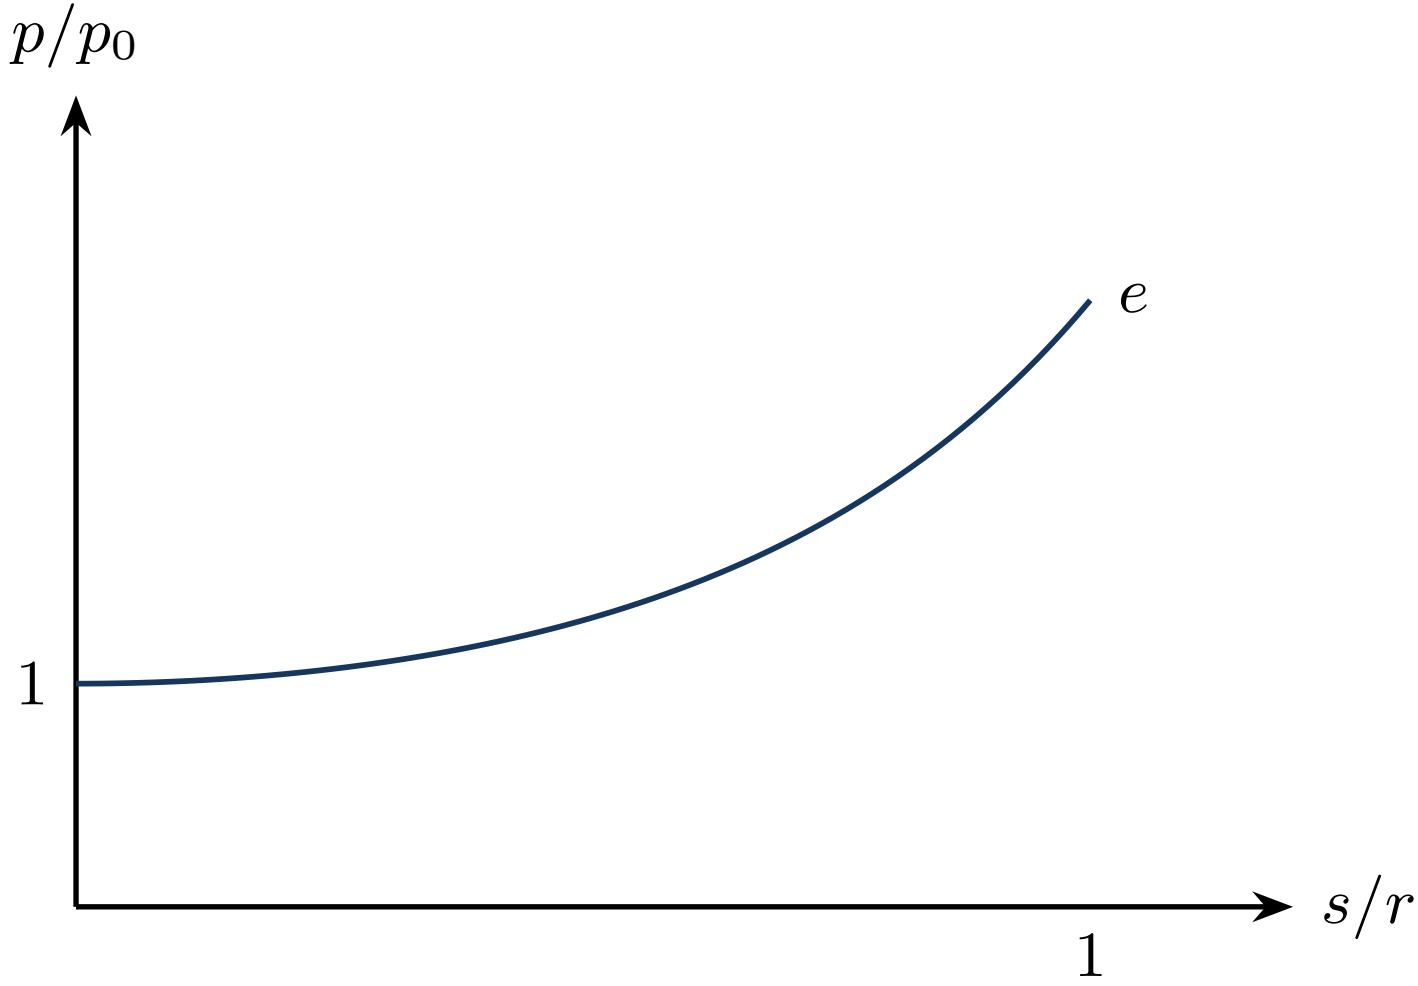
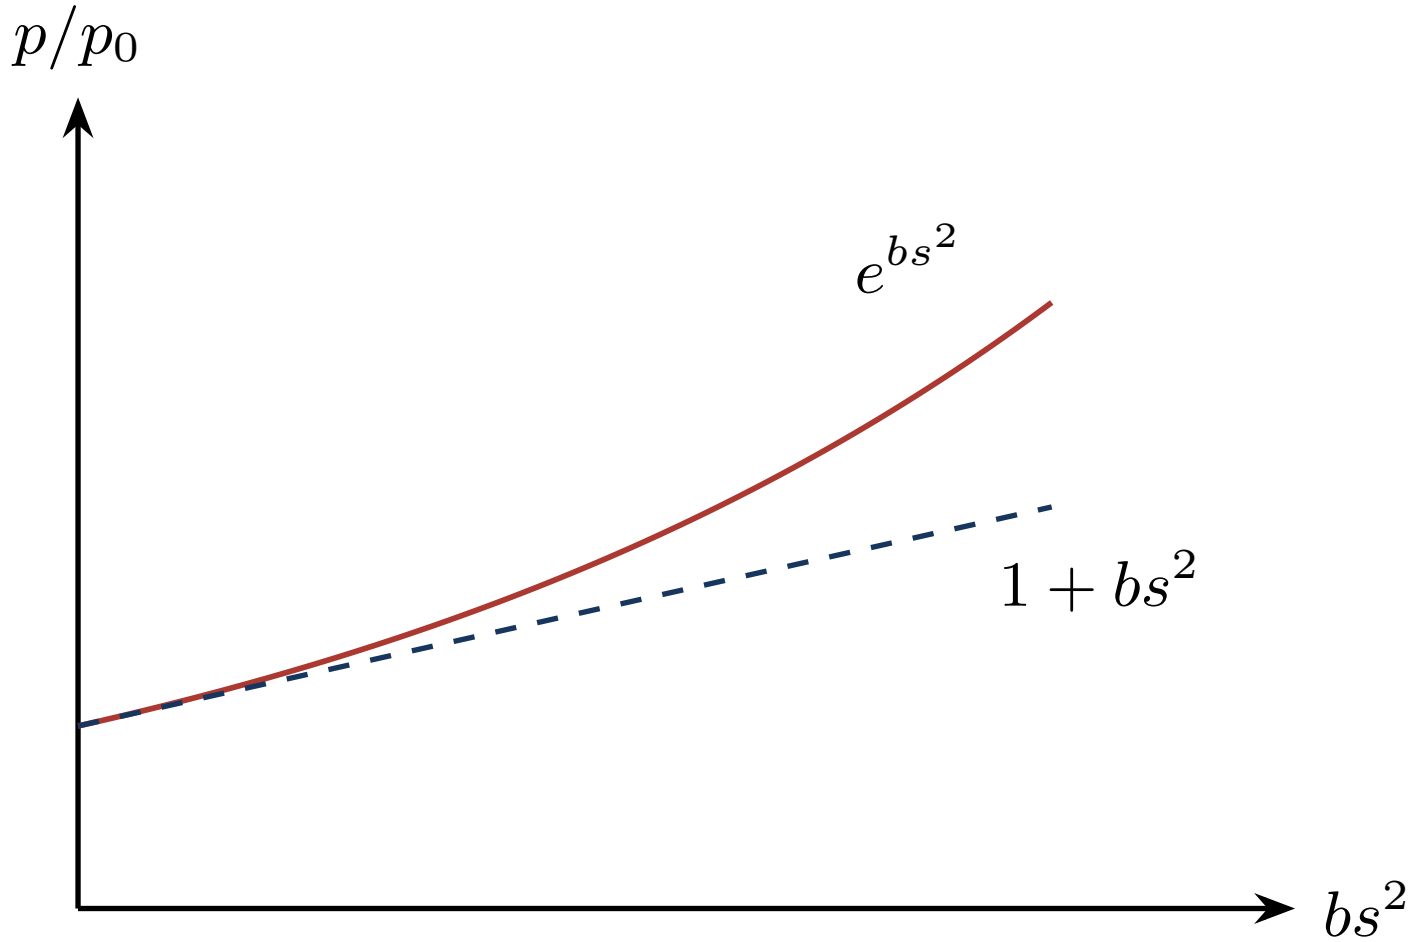
等温共转：p、ρ 向外增大，压力合力向内



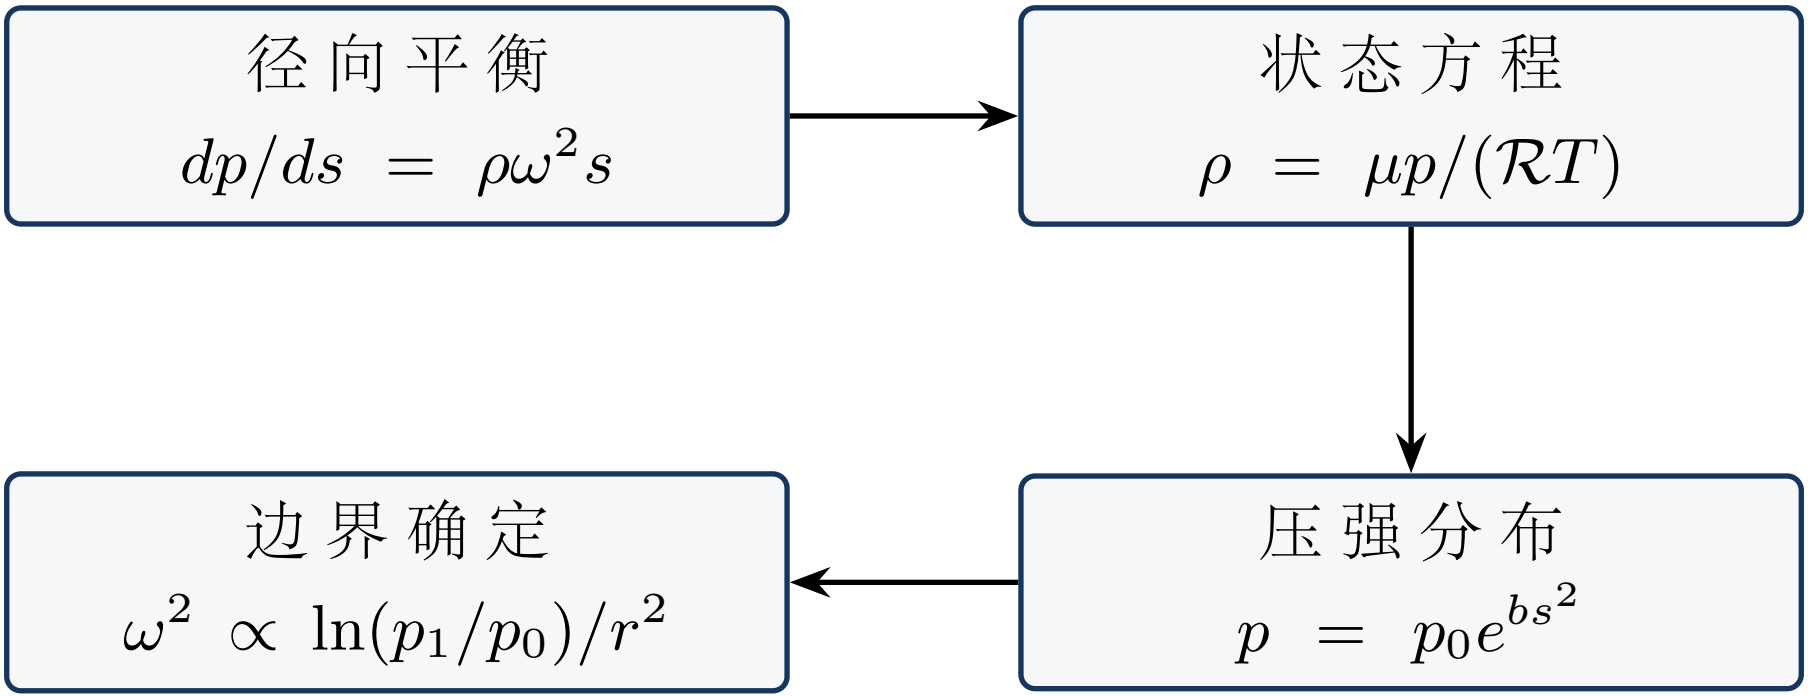
$$[p(s\ +\ ds)\ -\ p(s)]dS\quad =\quad \rho\, dS\, ds\, \omega^2 s$$



示例 $\mu\omega^2 r^2/(2\mathcal{R}T) = 1$，指数为径向坐标平方



小压差时线性化；大压差保留指数与对数



$b = \mu\omega^2/(2\mathcal{R}T)$；有限转速不能令轴线严格真空
