
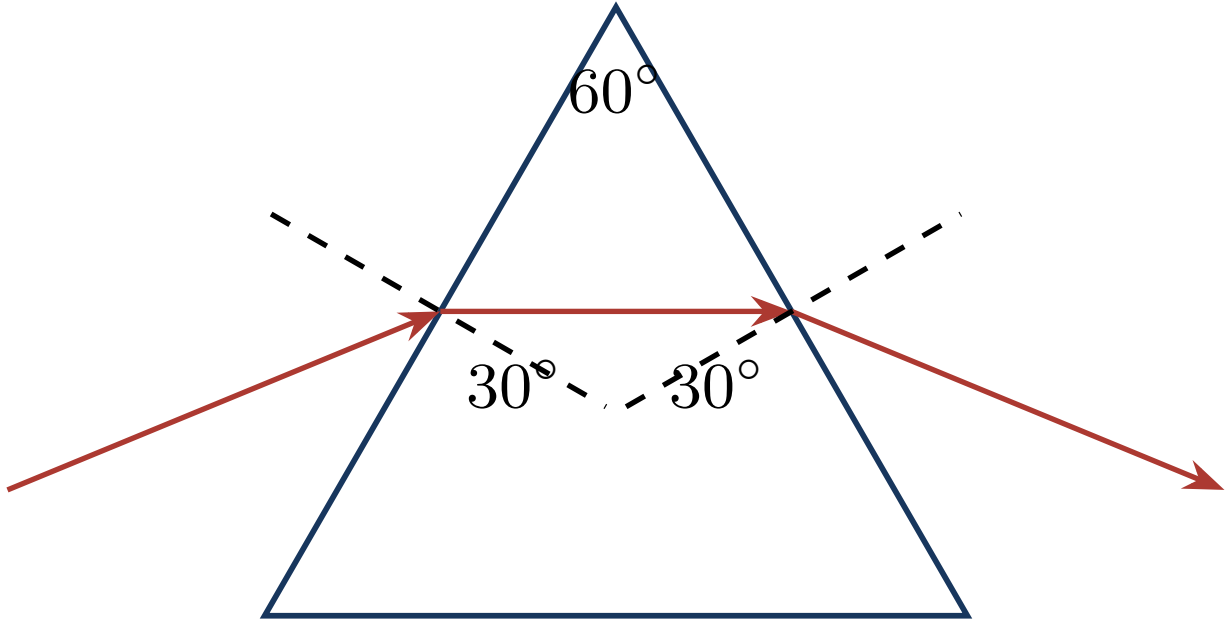
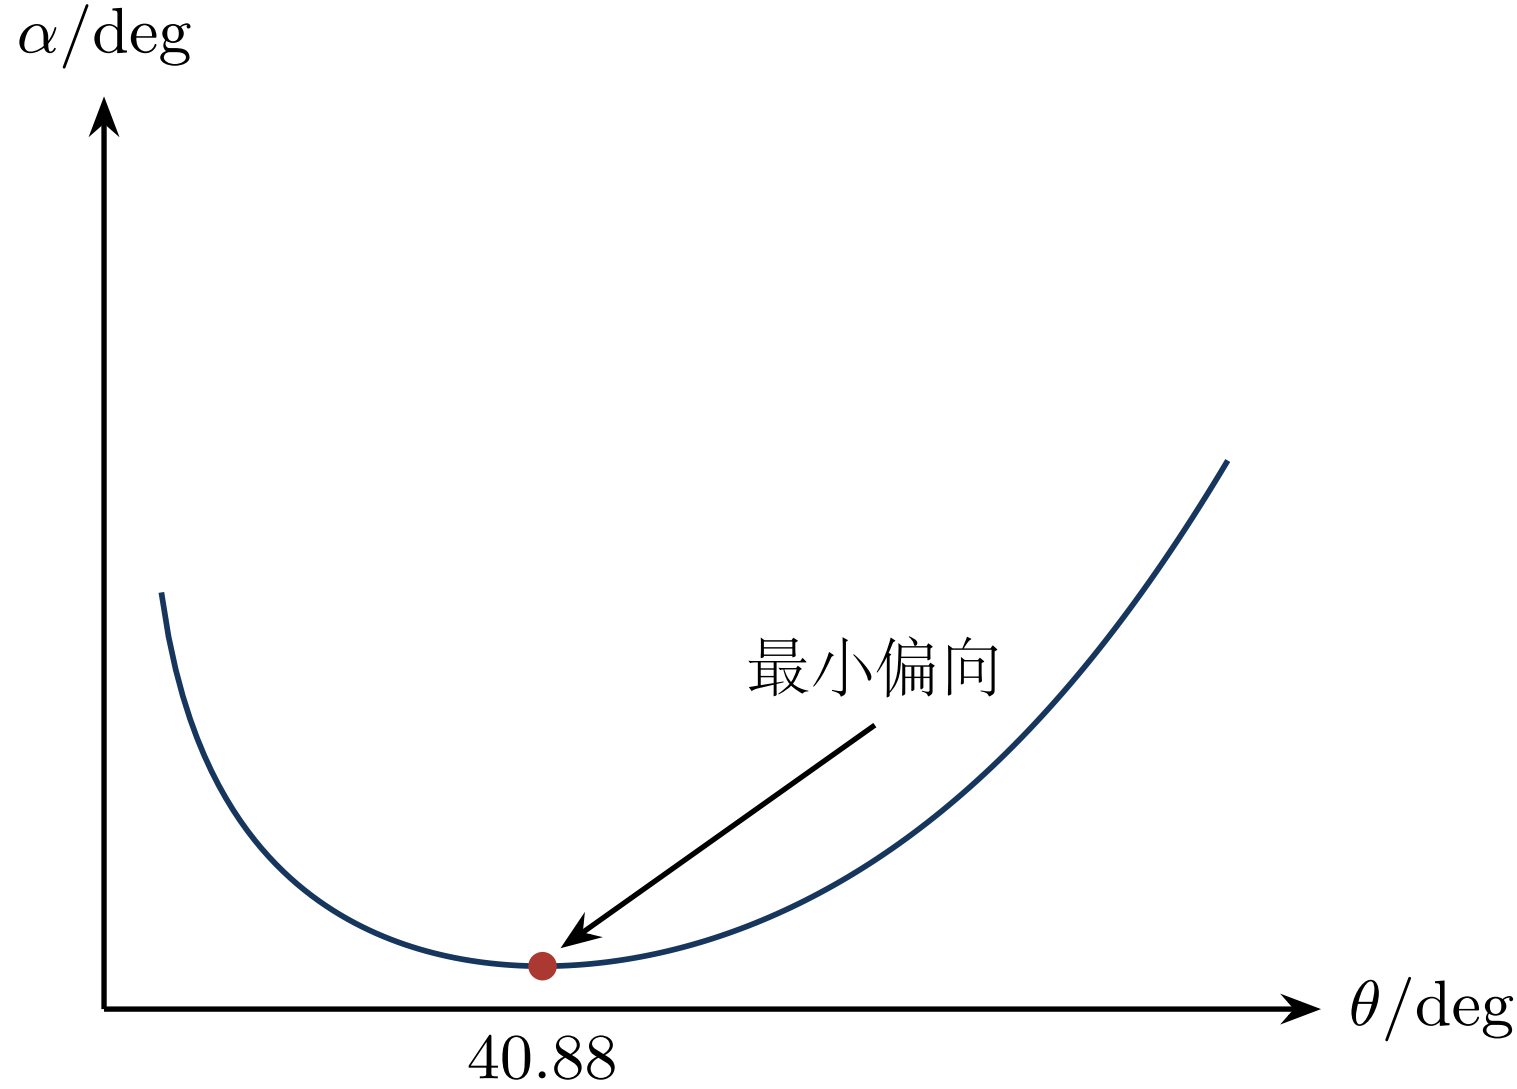
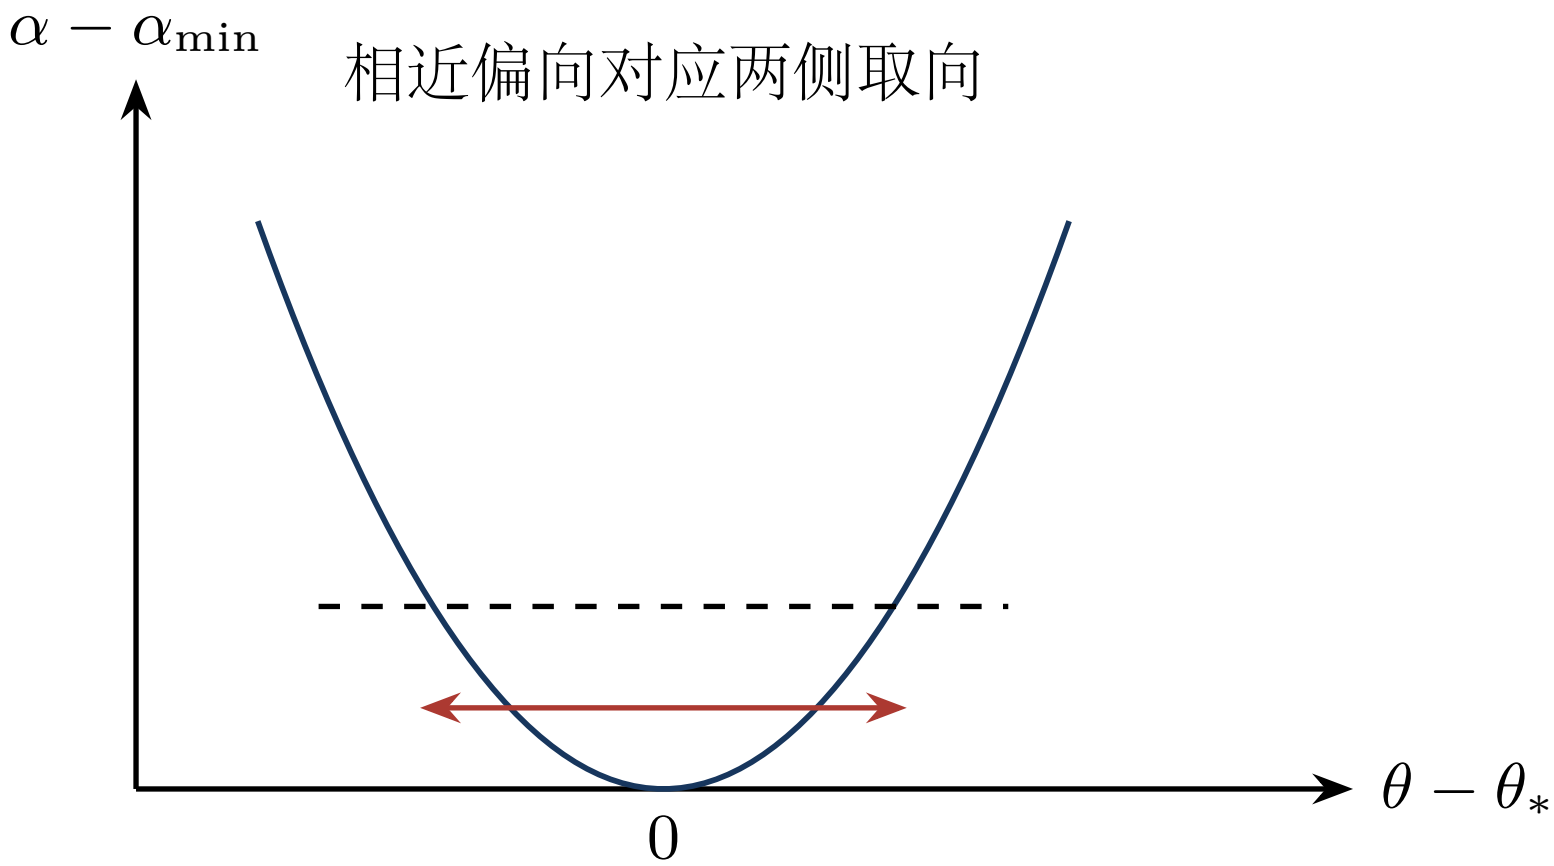
相关晶面延长后构成顶角 $A_p = 60°$ 的棱镜



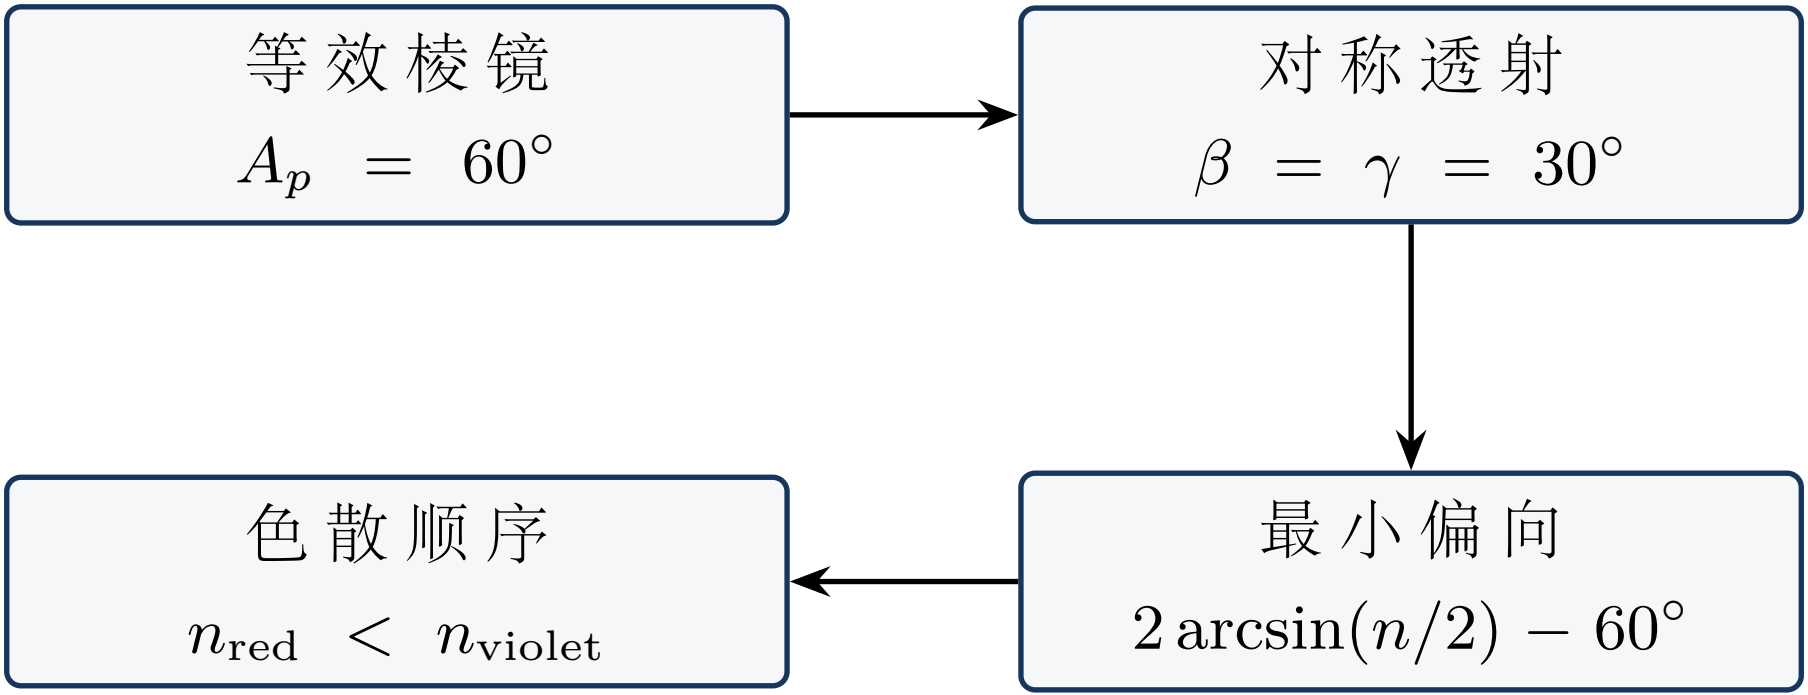
$$\theta_* = e_* \simeq 40.88^\circ, \ \alpha_{\min} \simeq 21.76^\circ$$



纵轴从 20 度起绘；最低偏向为 21.7635 度



$\alpha - \alpha_{\min} \propto (\theta - \theta_*)^2$；内缘外侧光线集中



偏向随折射率增大而增大，红在光环内缘
