
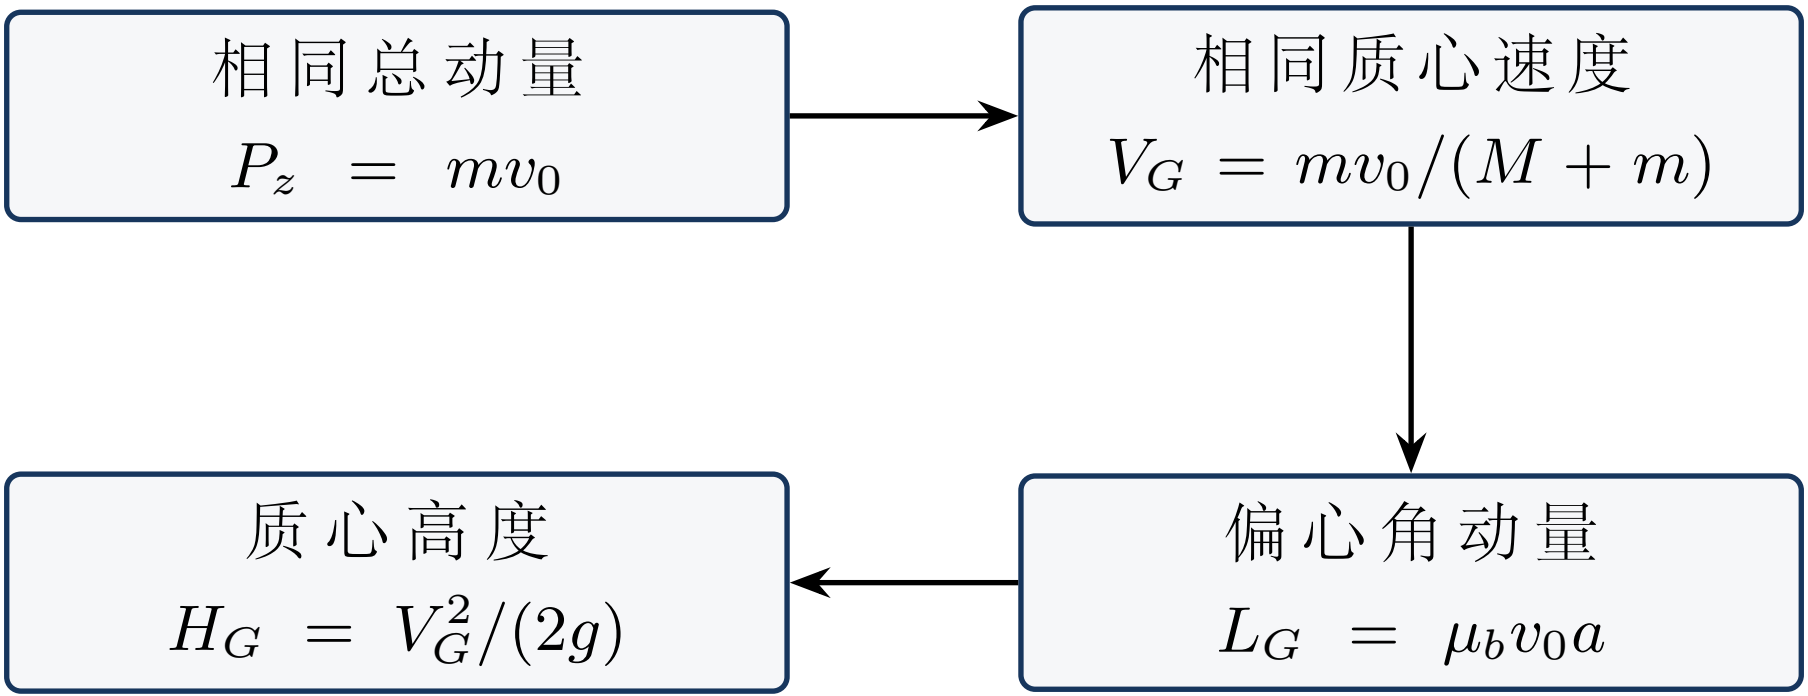
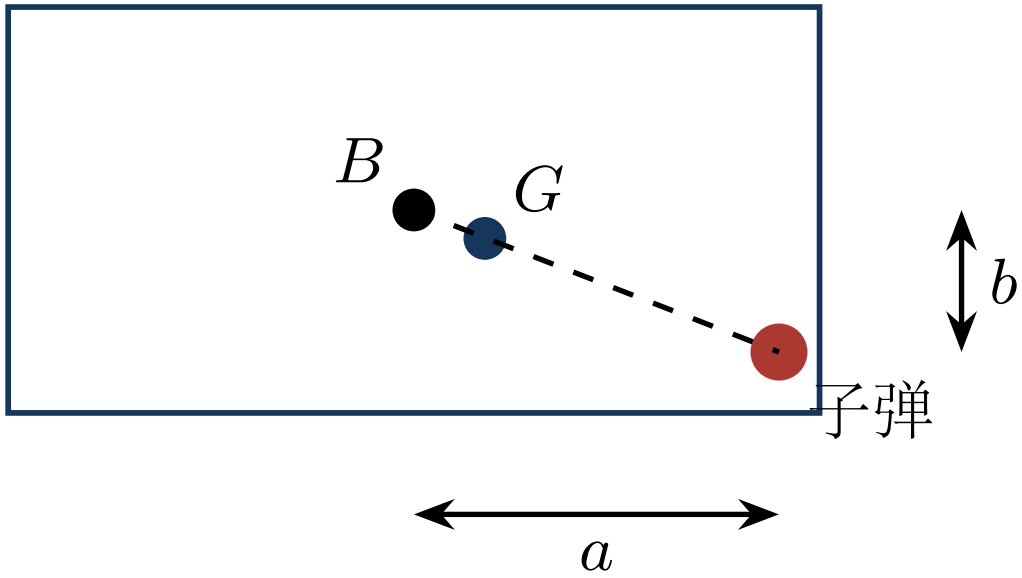
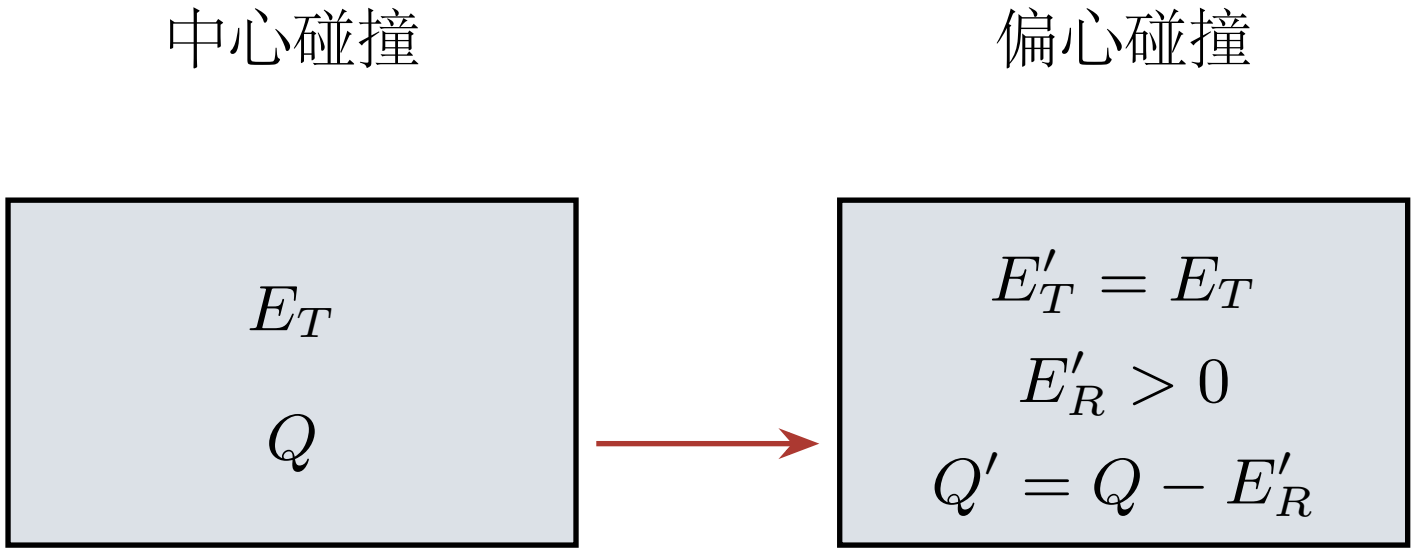
总竖直动量相同；偏心碰撞另有关于质心的角动量



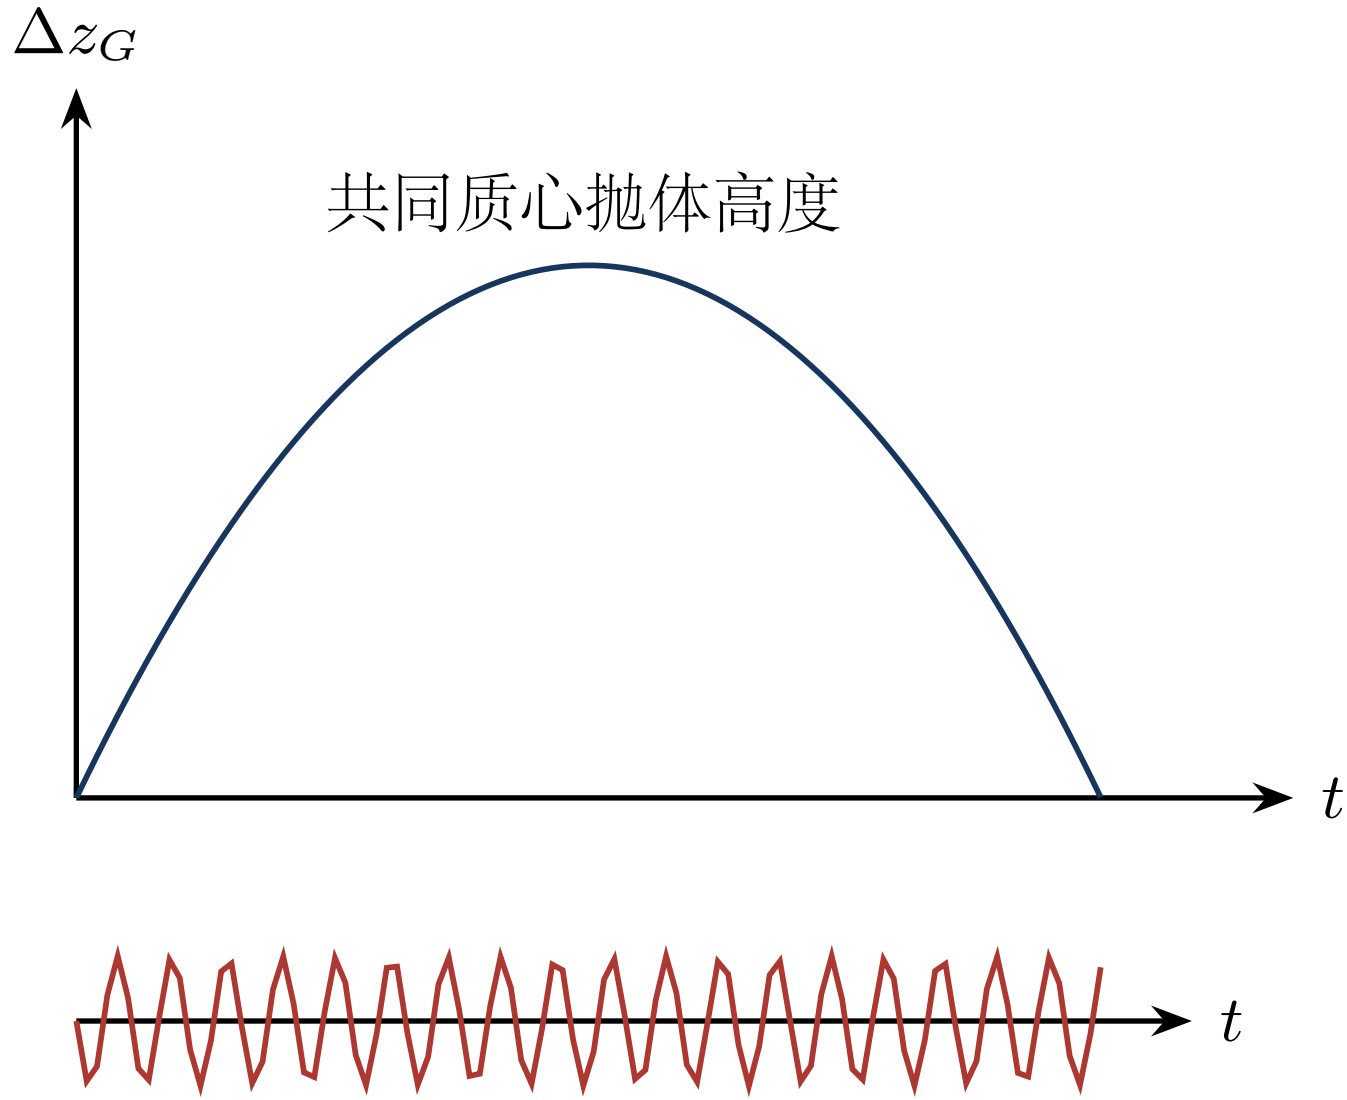
新增转动能减少非弹性损失，不减少相同总动量的质心平动能



质心偏移图示已放大；$I_G = I_0 + \mu_b(a^2 + b^2)$



方框只列能量栏目，不按比例；初动能 1250 焦，两种平动能相同



木块中心另加旋转项 $-\epsilon a \sin \Omega t$

下图振幅示意放大，原数值幅度约 0.990 毫米
