
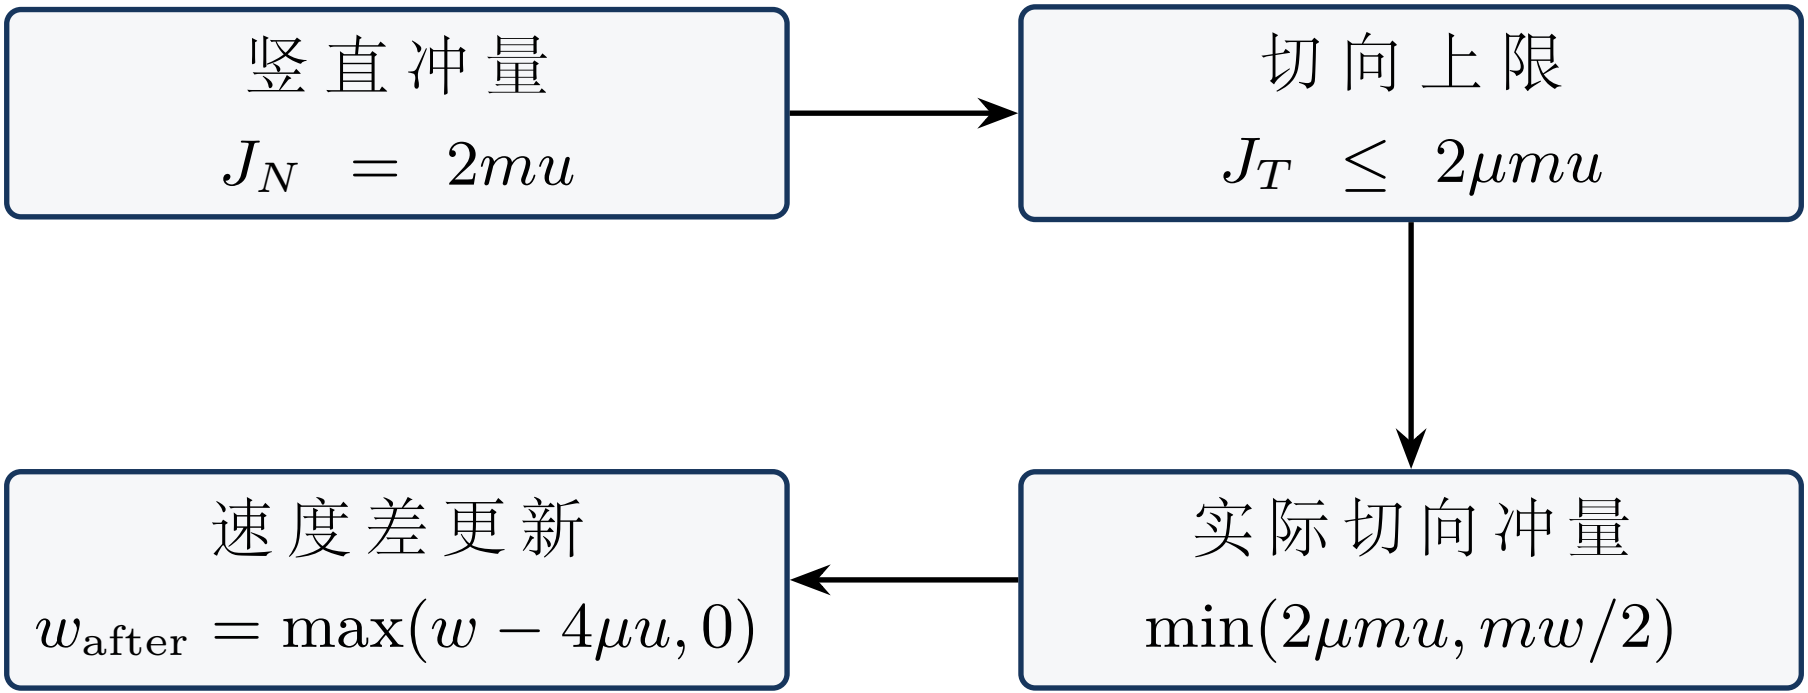
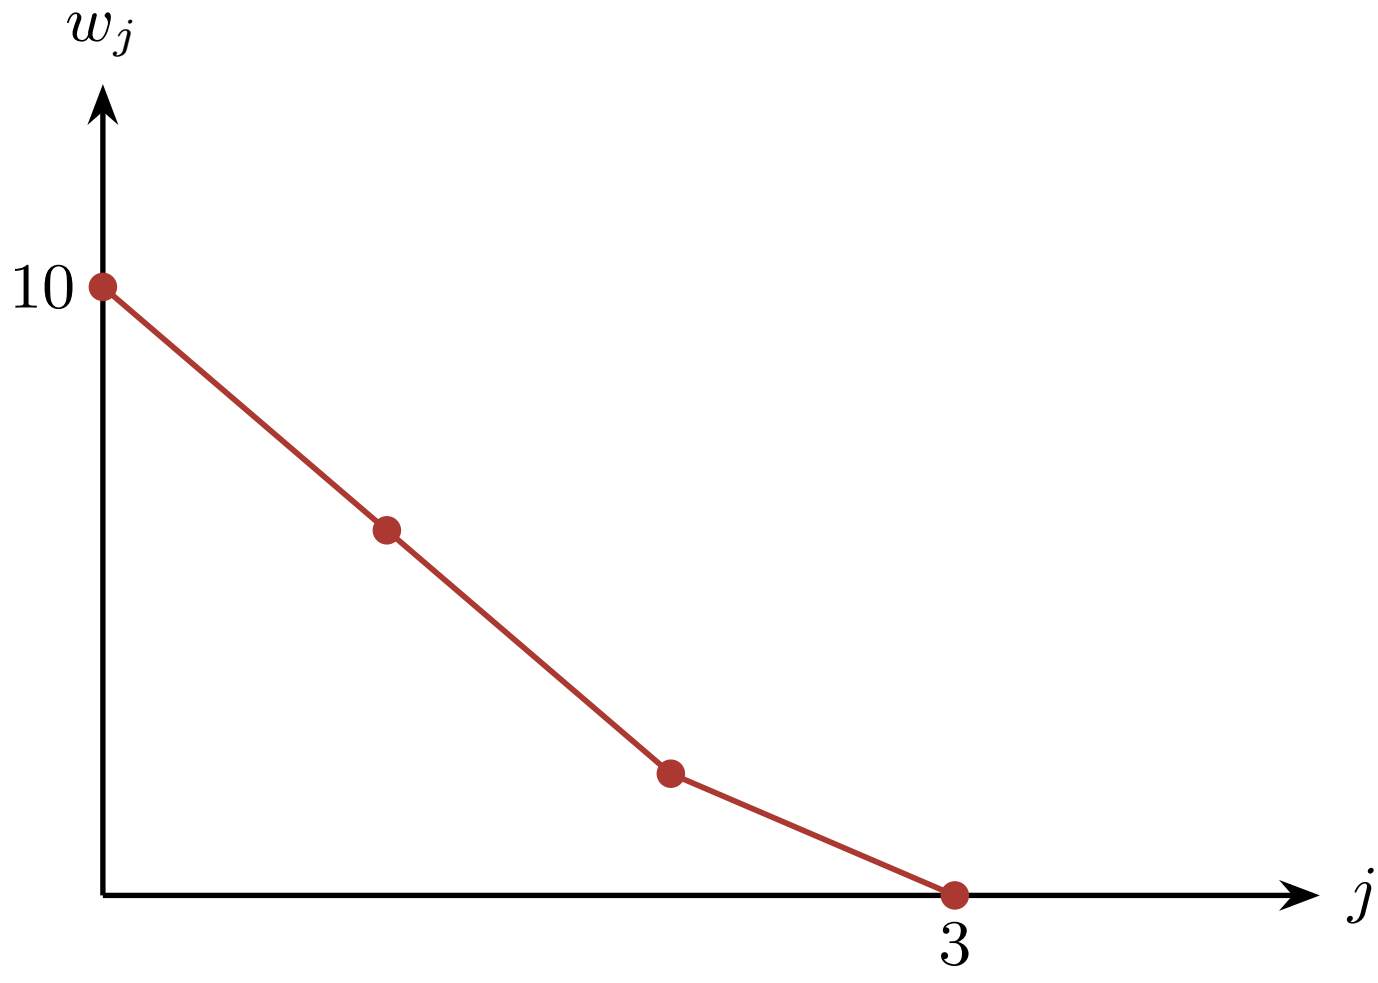
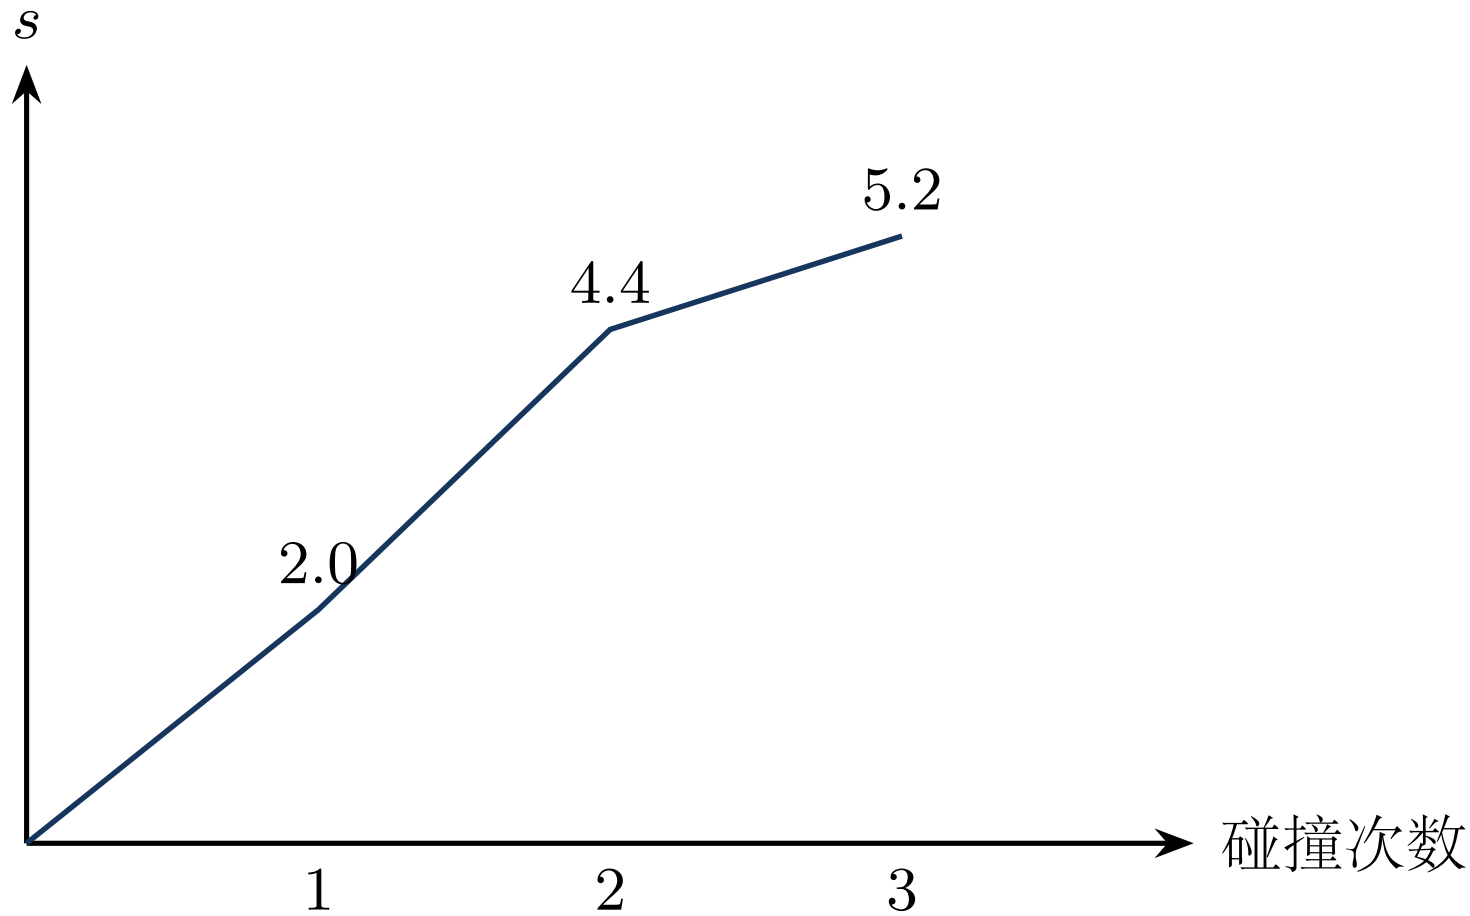
首次飞行 t_0；以后竖直反弹间隔 $2t_0$



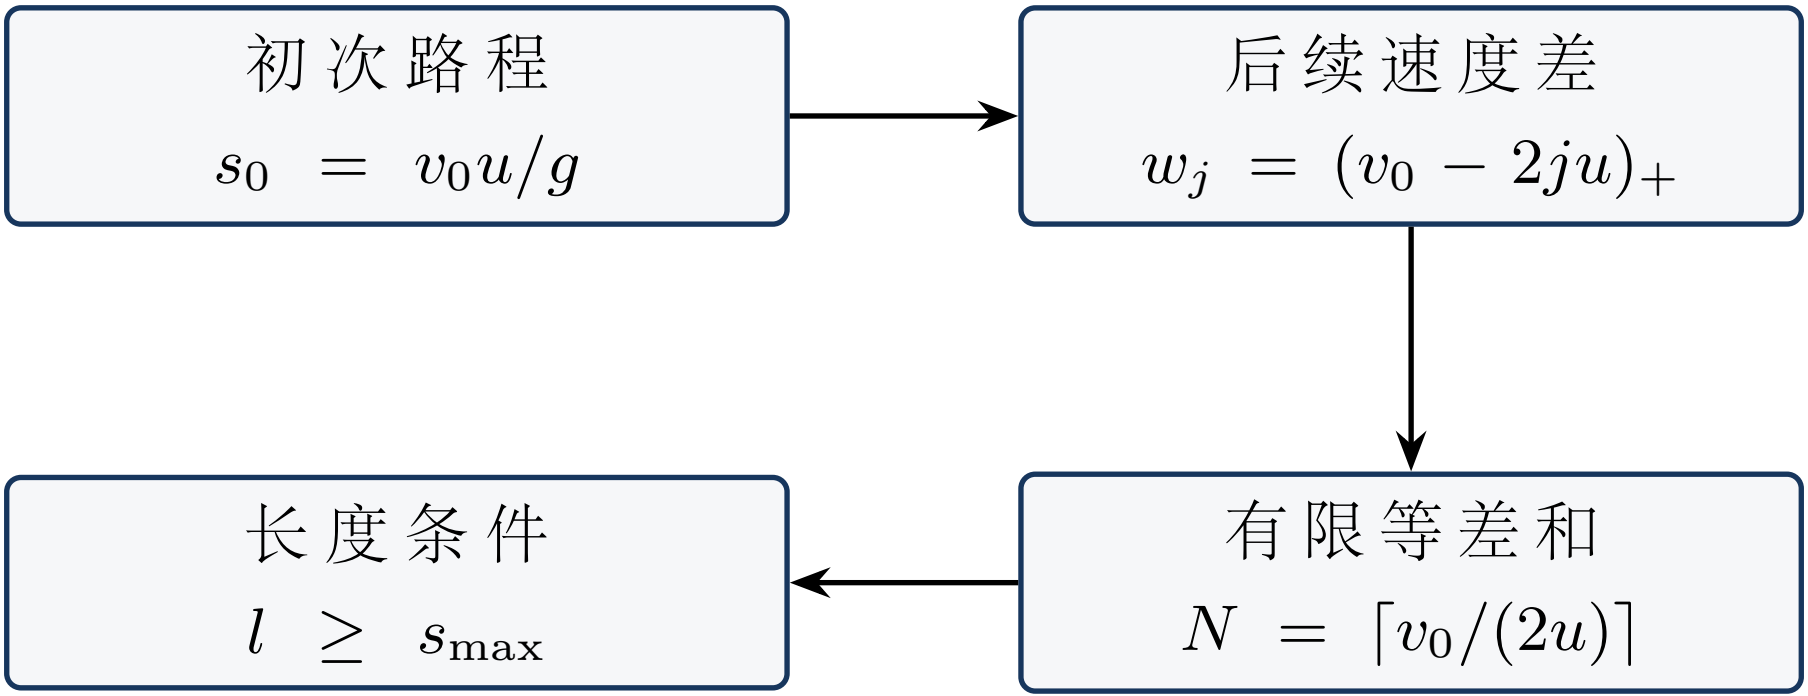
共速时截断最大摩擦冲量，不能继续造成人为反向



示例 $u = 2$、$v_0 = 10$：速度差 $10, 6, 2, 0$



先计初次路程，再累加 $w_j(2u/g)$；停滑后相对位置固定



例 $g = 10, h = .2, v_0 = 10$ 得 $l \geq 5.20\,\mathrm{m}$
