
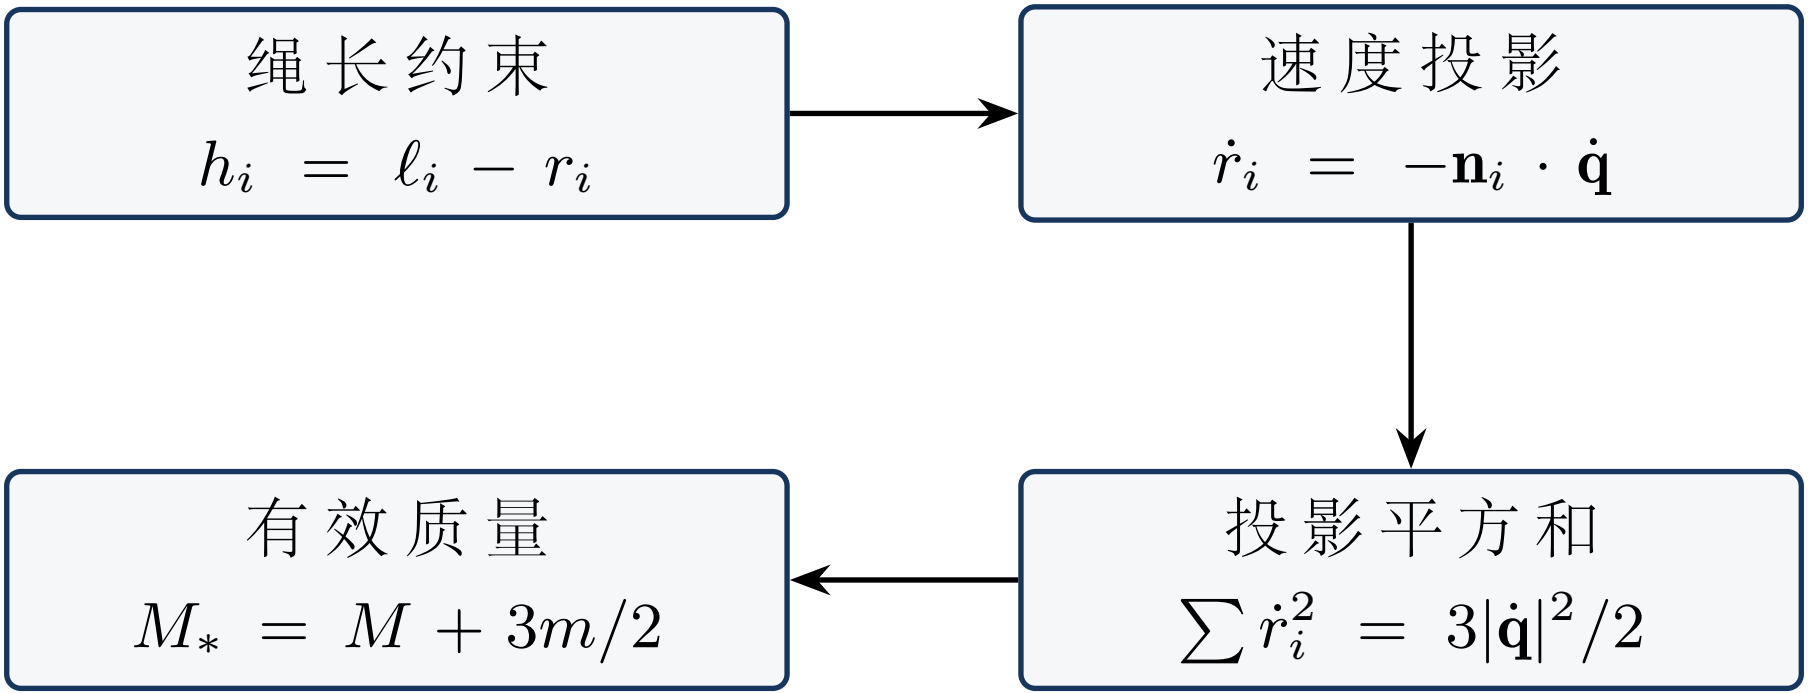
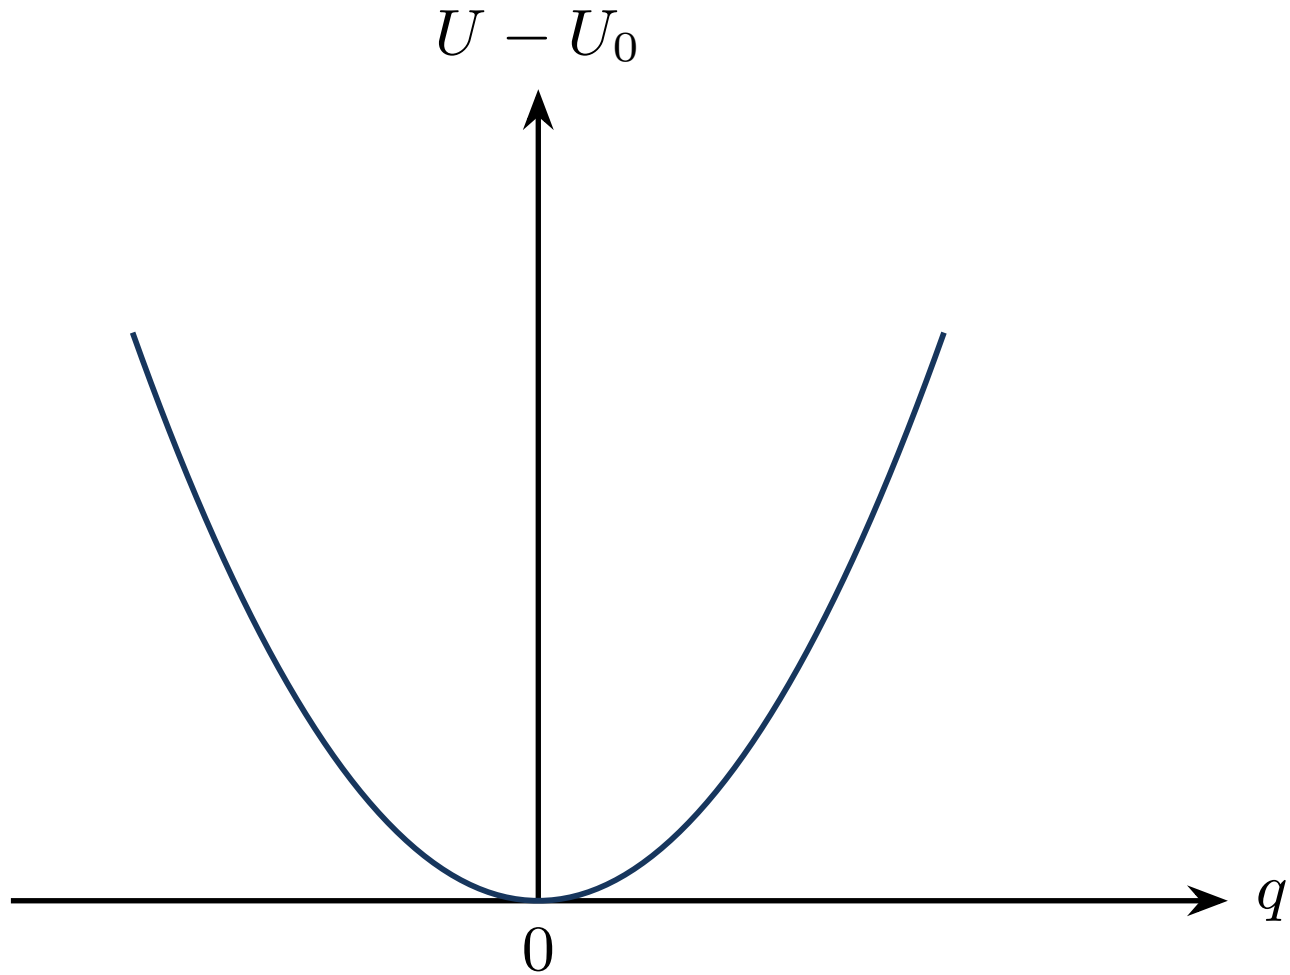
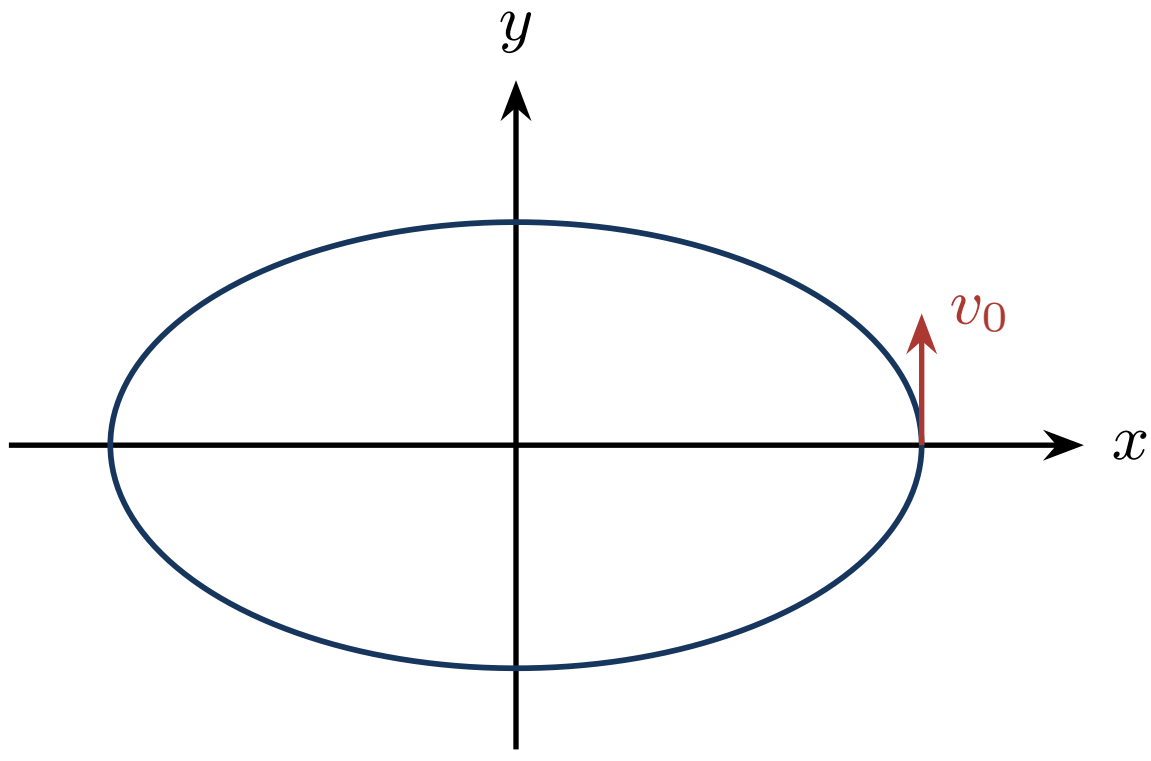
每孔桌下悬挂质量 m; $OA = L/\sqrt{3}$



约束消去自由度，但不消去悬挂物的动能

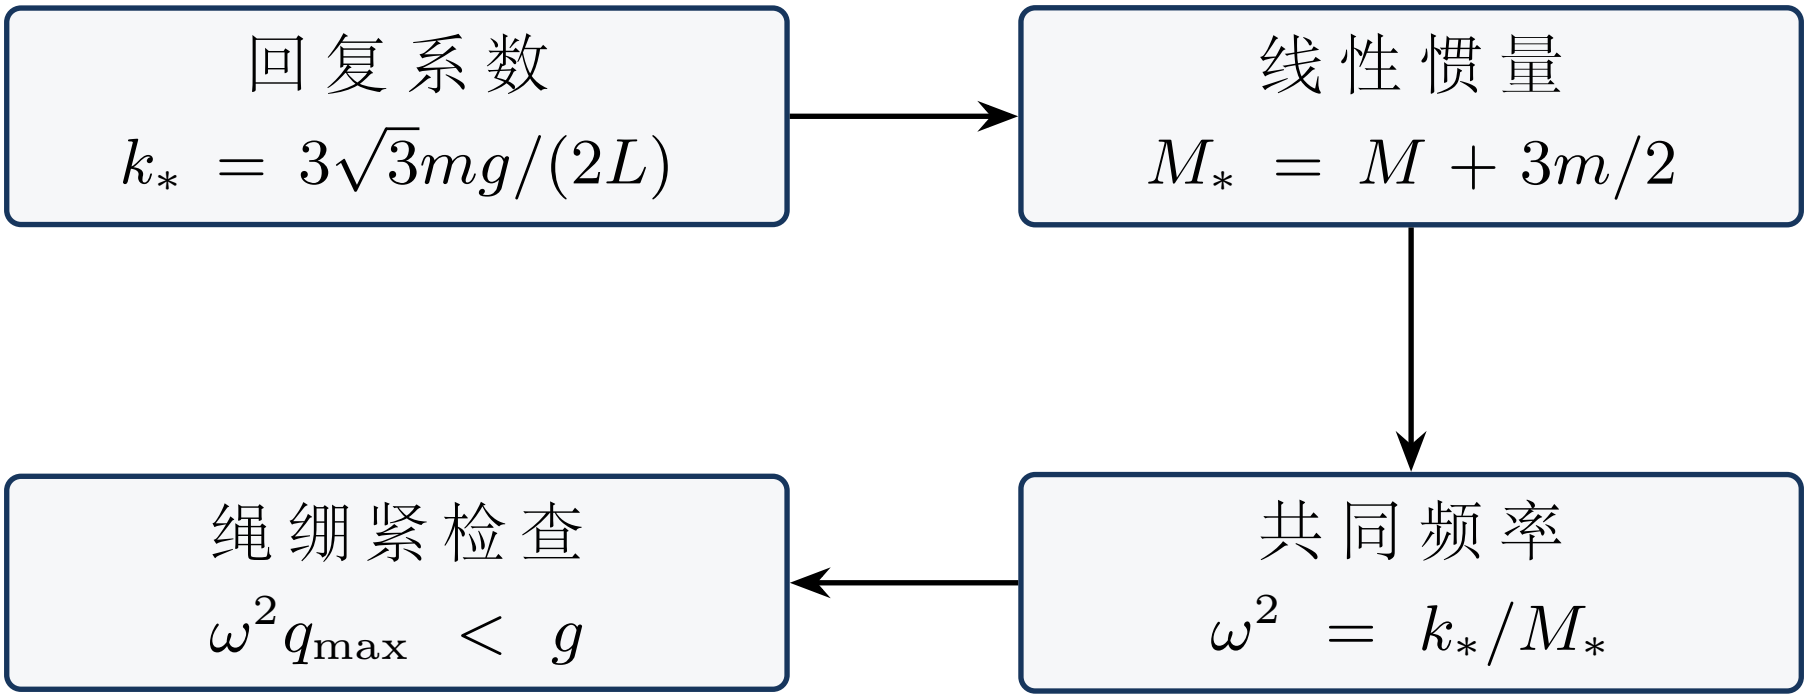


二阶势能 $k_*|\mathbf{q}|^2/2$；两个方向的 Hessian 相同



$x = \Delta x \cos \omega t$, $y = (v_0/\omega) \sin \omega t$

原点位于椭圆中心，初速度沿 y 方向



二维等频只在小振幅线性模型中成立
