
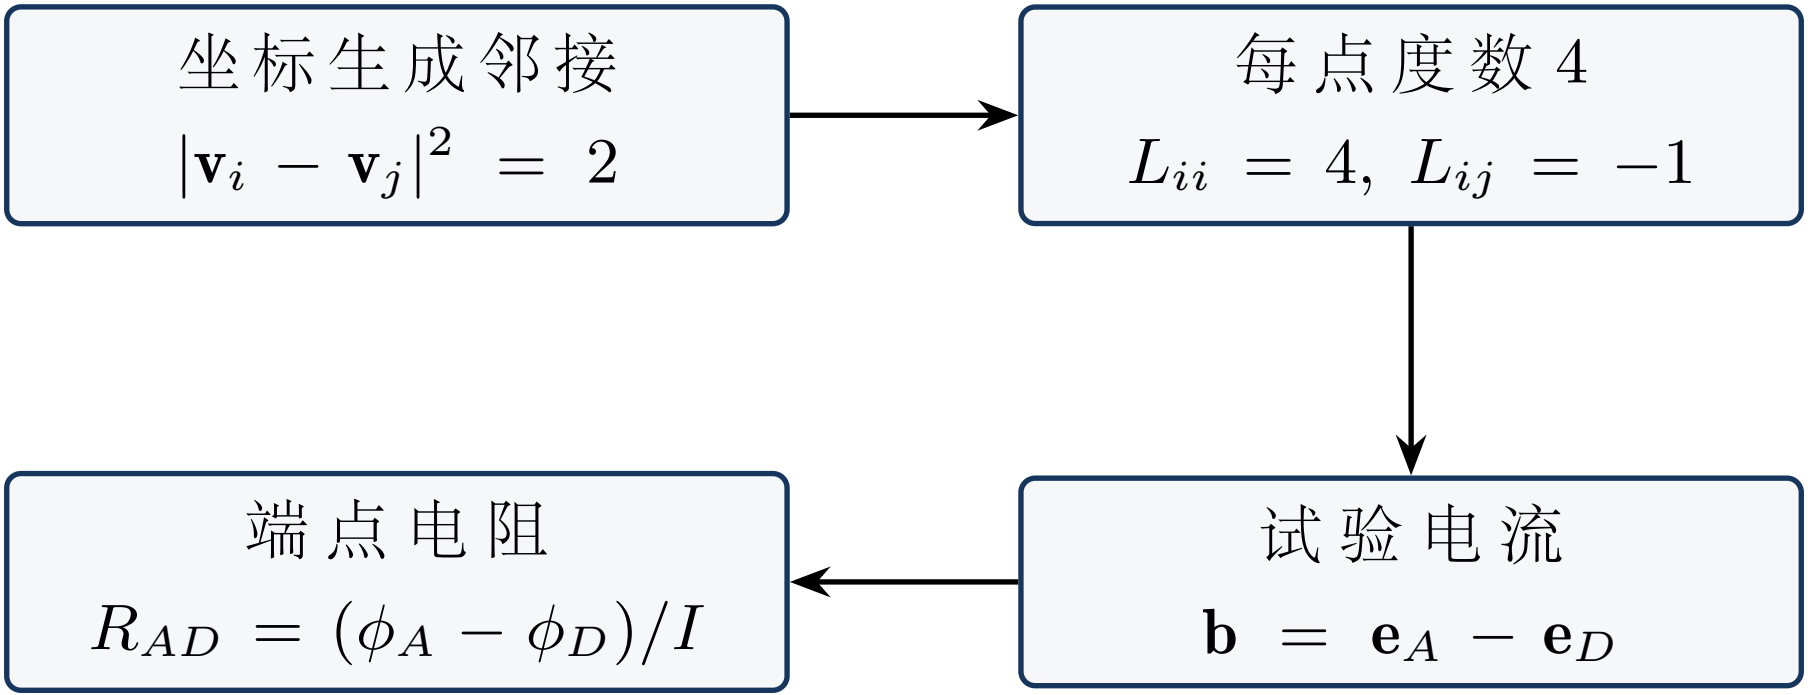
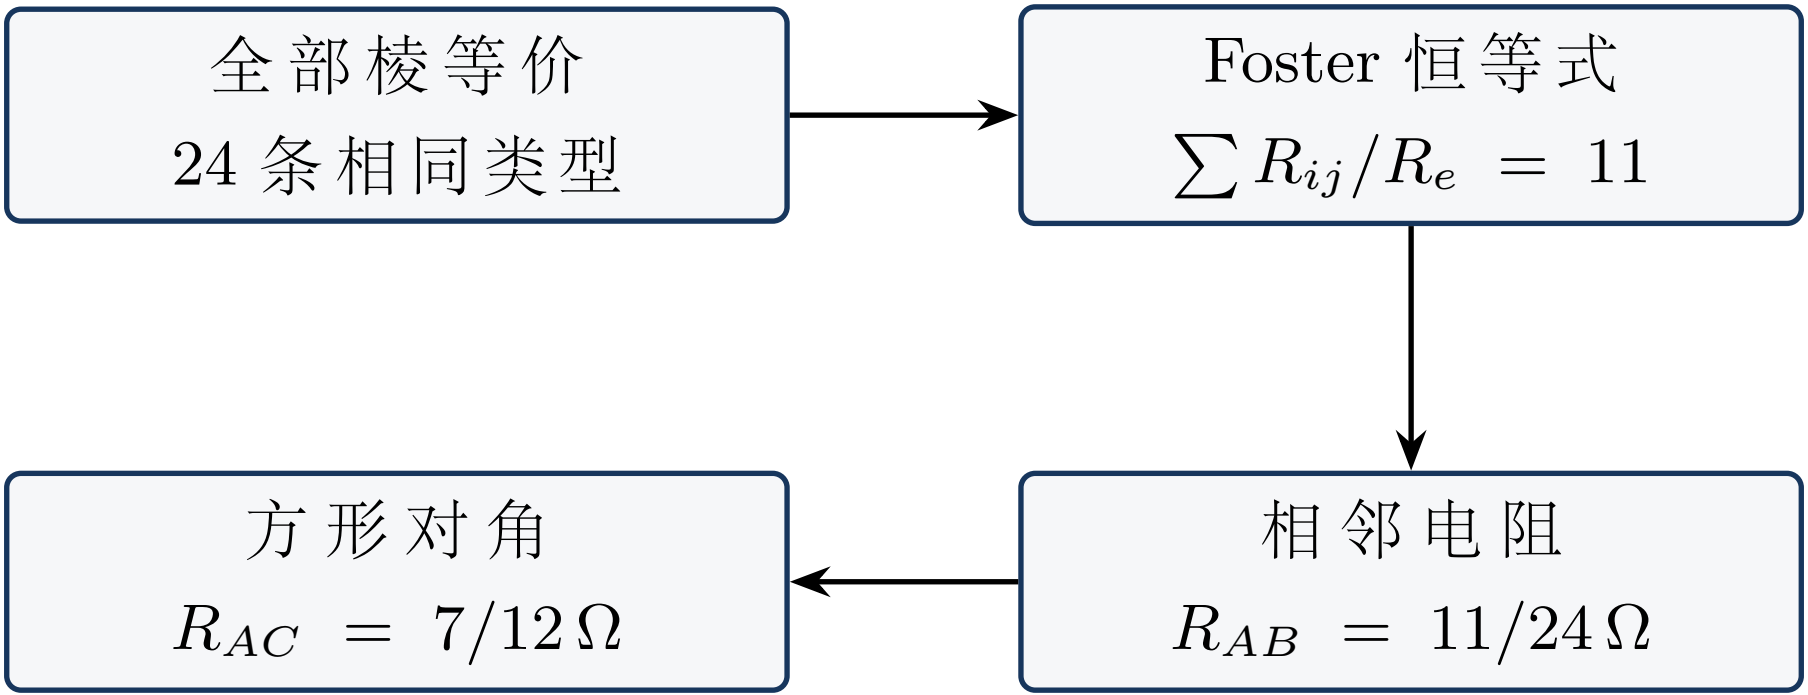
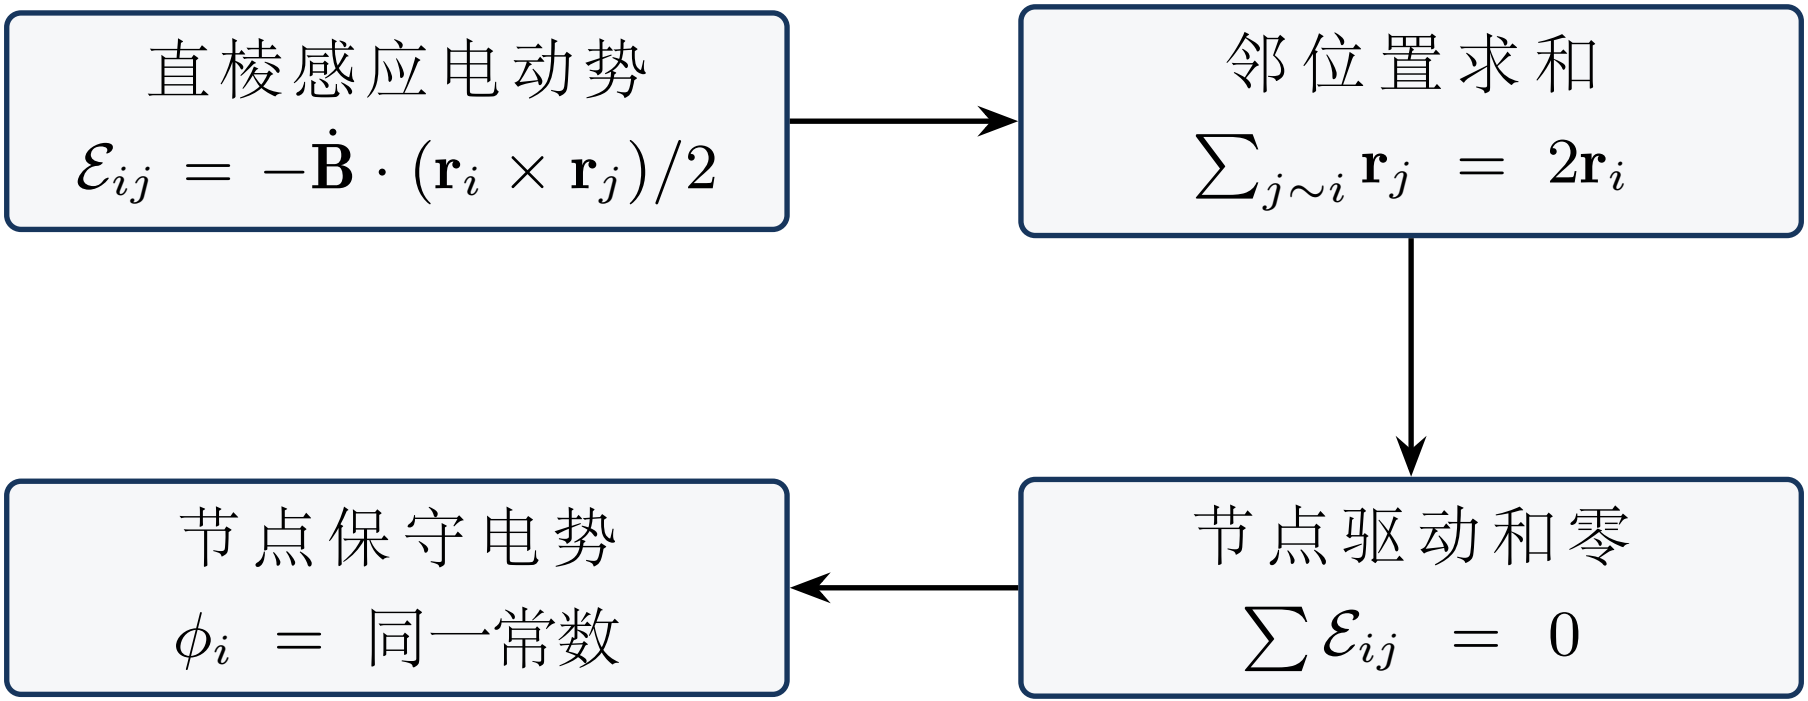
立方八面体：12 顶点、24 棱、14 面；每棱 1 欧
线段为三维网络投影，投影交叉处不新增节点



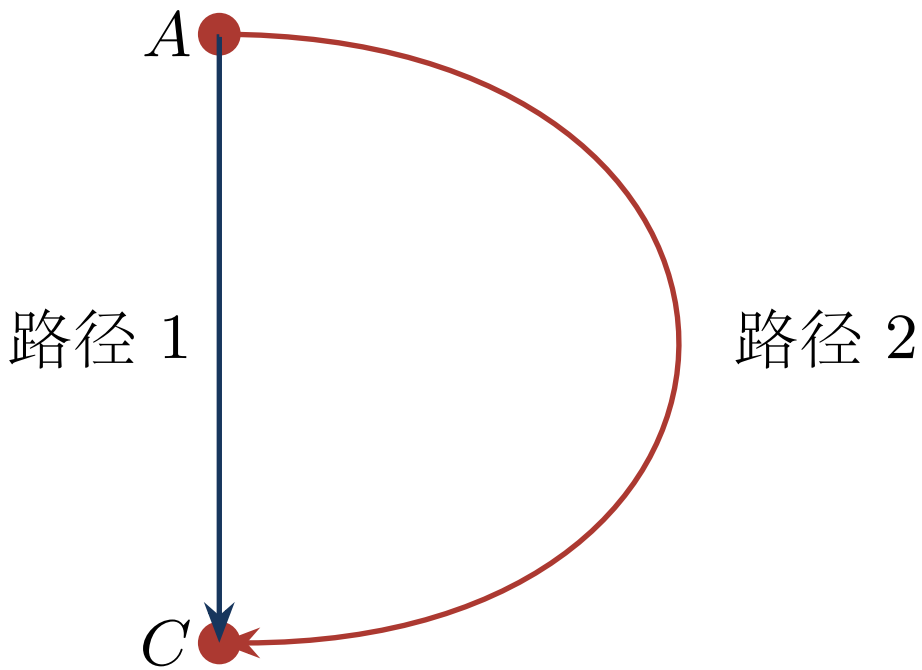
固定汇点电势与伪逆法独立求解全部节点



只允许按保持源汇边界的对称并点；对角结果须另解节点方程



节点零差不阻止回路感应环流



$$\text{两路径读数差} = \quad -\dot{\mathbf{B}} \cdot \mathbf{S}$$

保守节点差为零，直线 $A \rightarrow C$ 积分为 $-al^2/4$
