
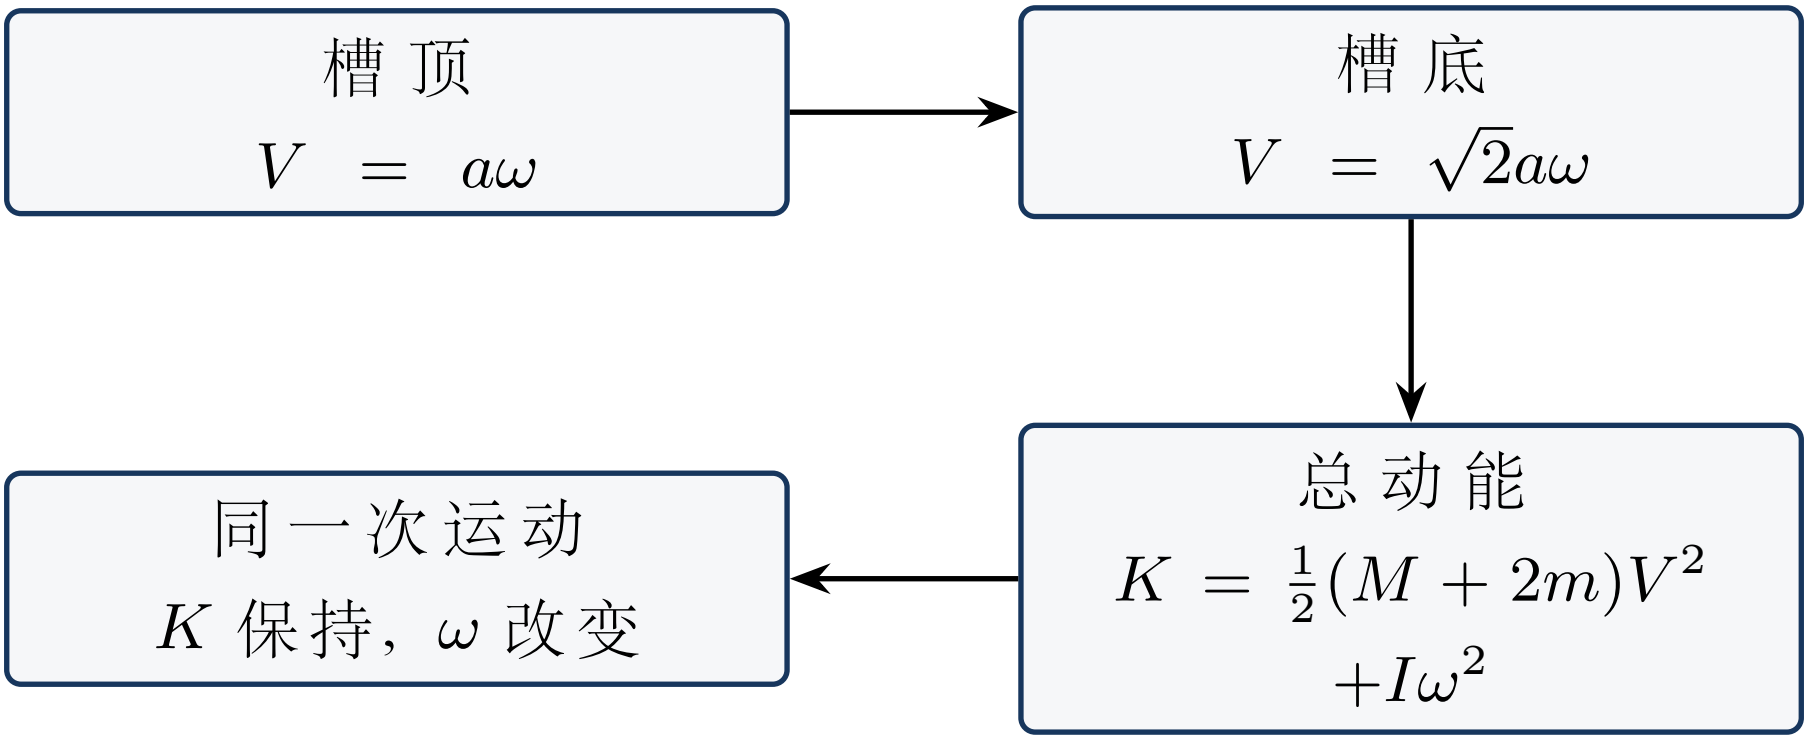
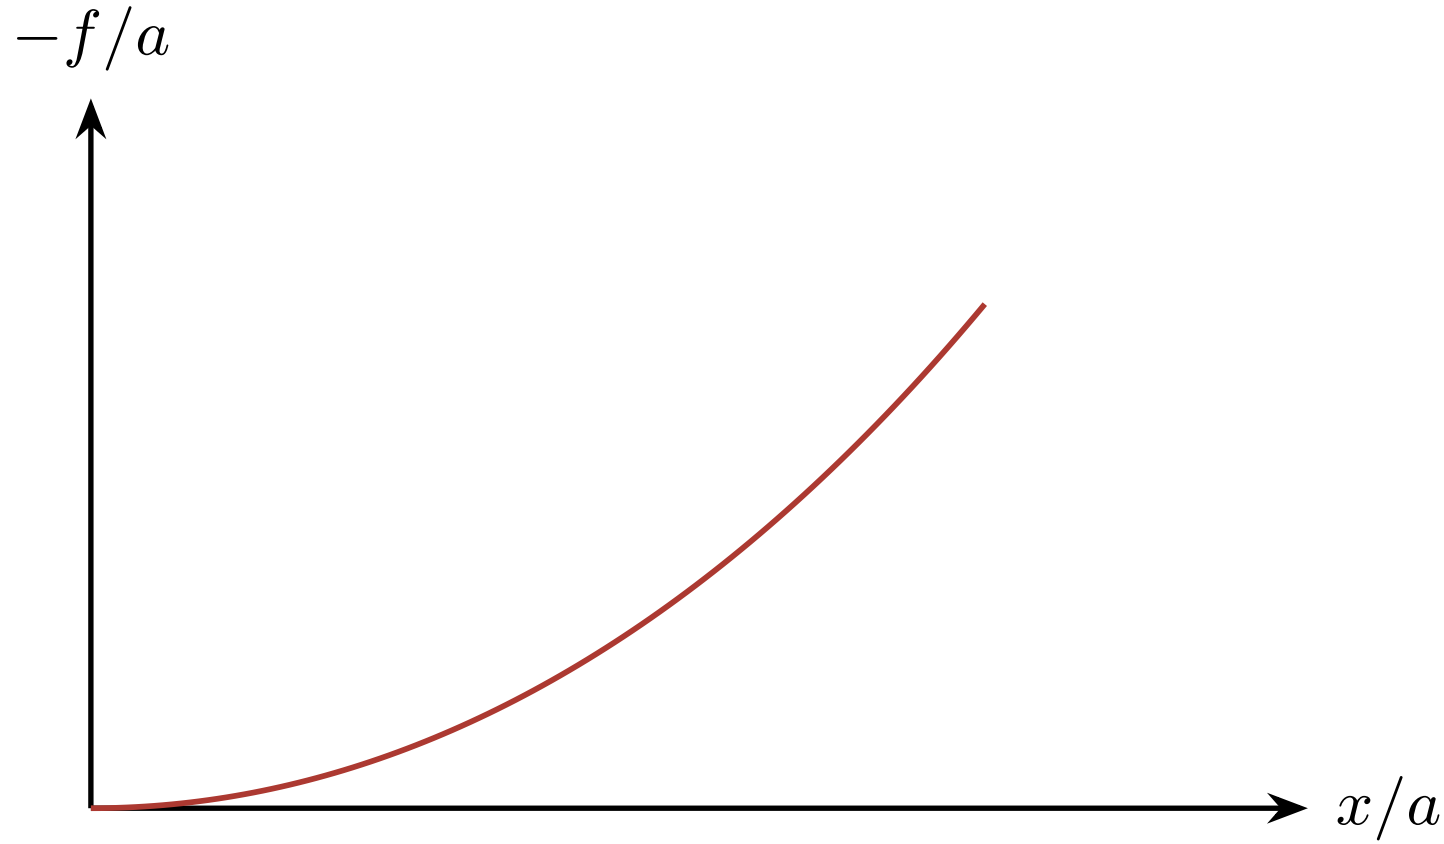
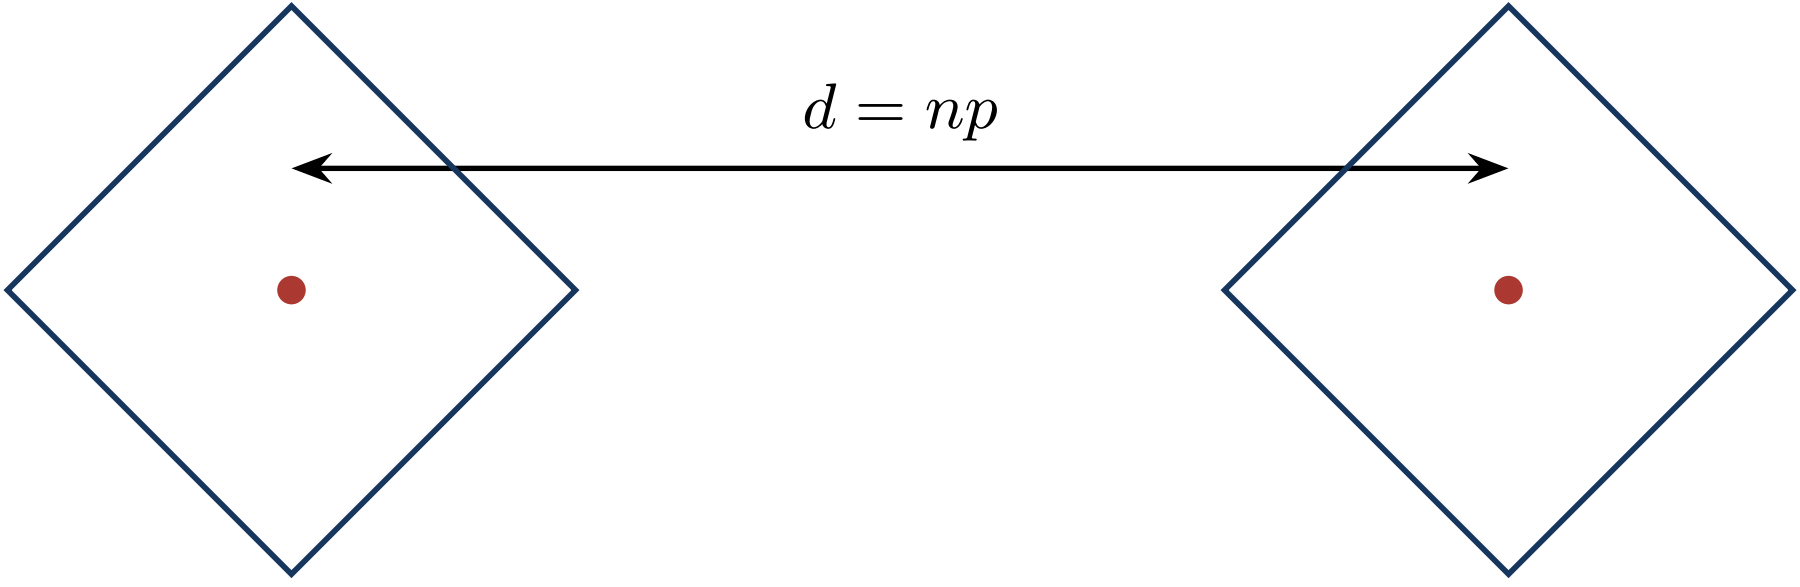
槽底接触半径为 $\sqrt{2}a$；方轮与路面按同一比例绘制



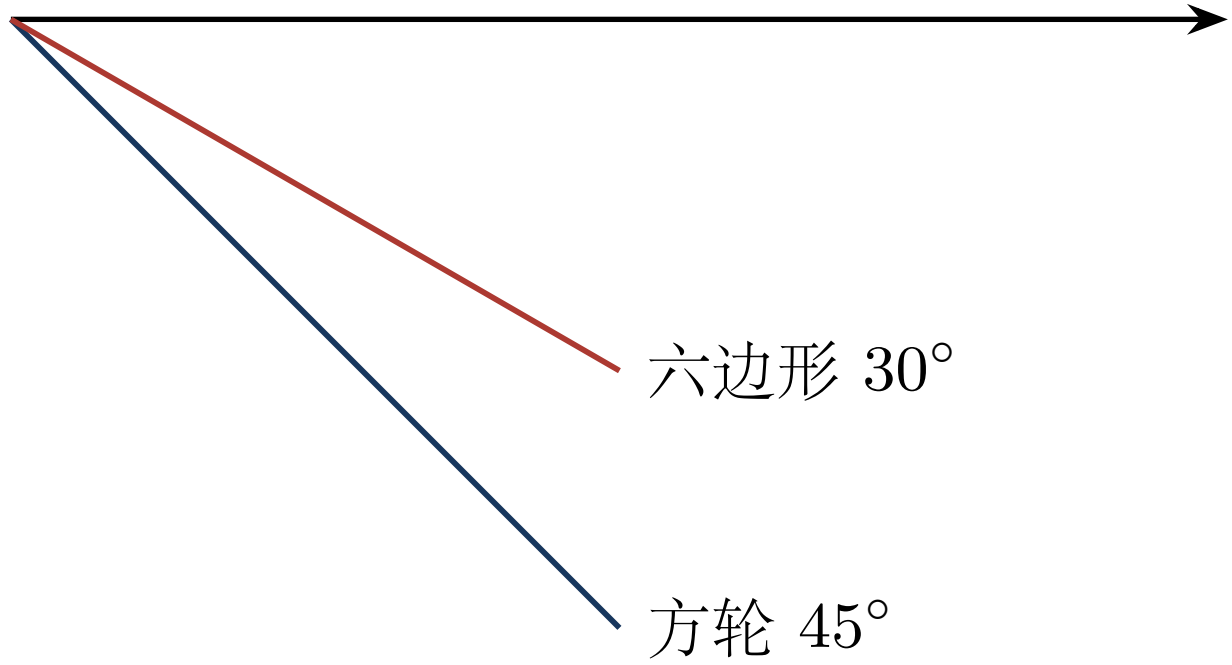
每个位置的 ω 是瞬时值，不能强行相等



半槽 $f = a[1 - \cosh(x/a)]$；弧长 $s = a\sinh(x/a)$



全相位不穿入需 $d \geq 2\sqrt{2}a$；最小整数周期为 $n = 2$



接触边切换角不同；六边形需要重新截取匹配路面
