
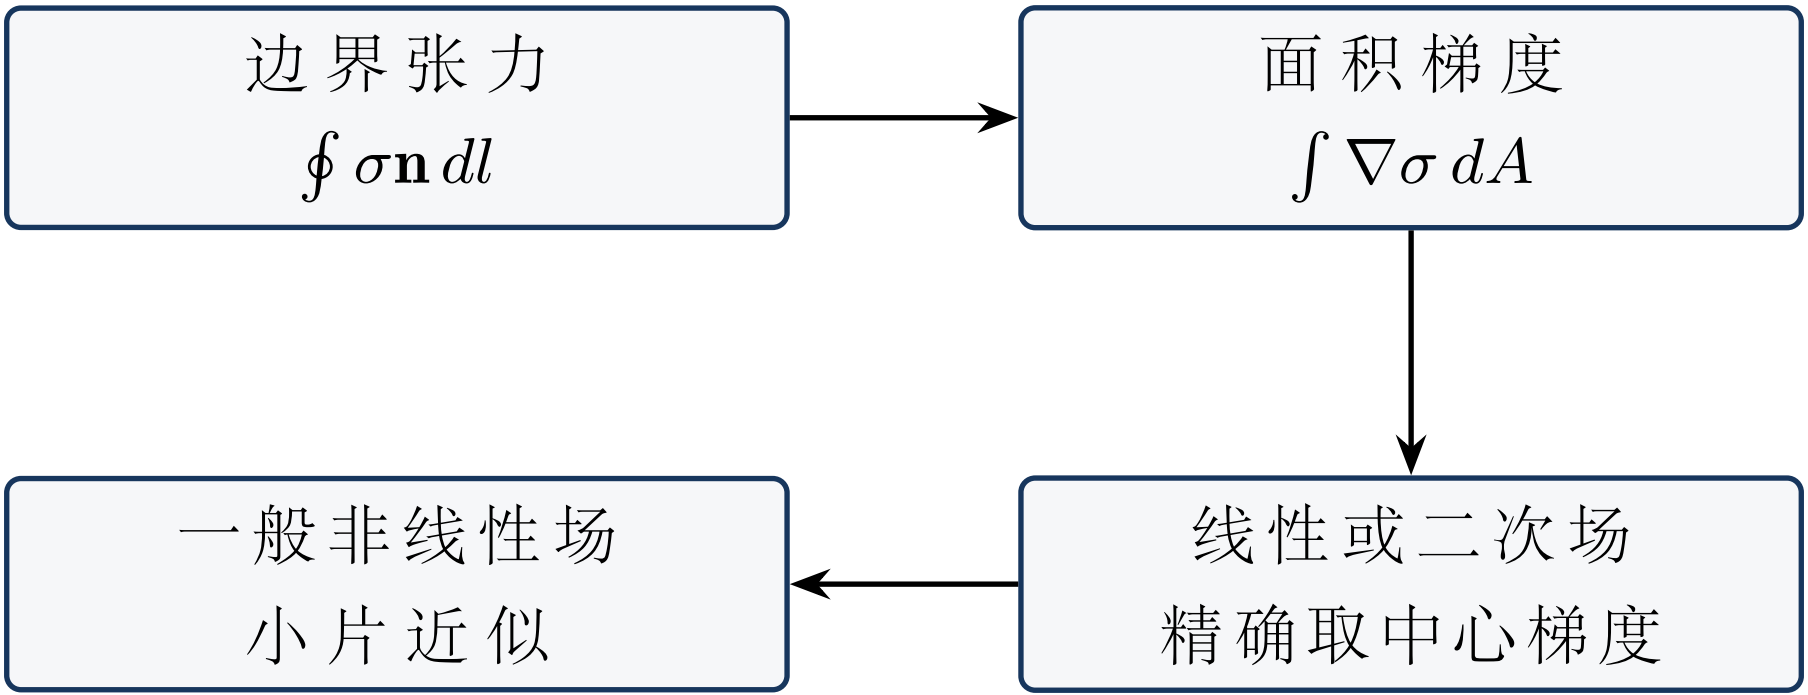
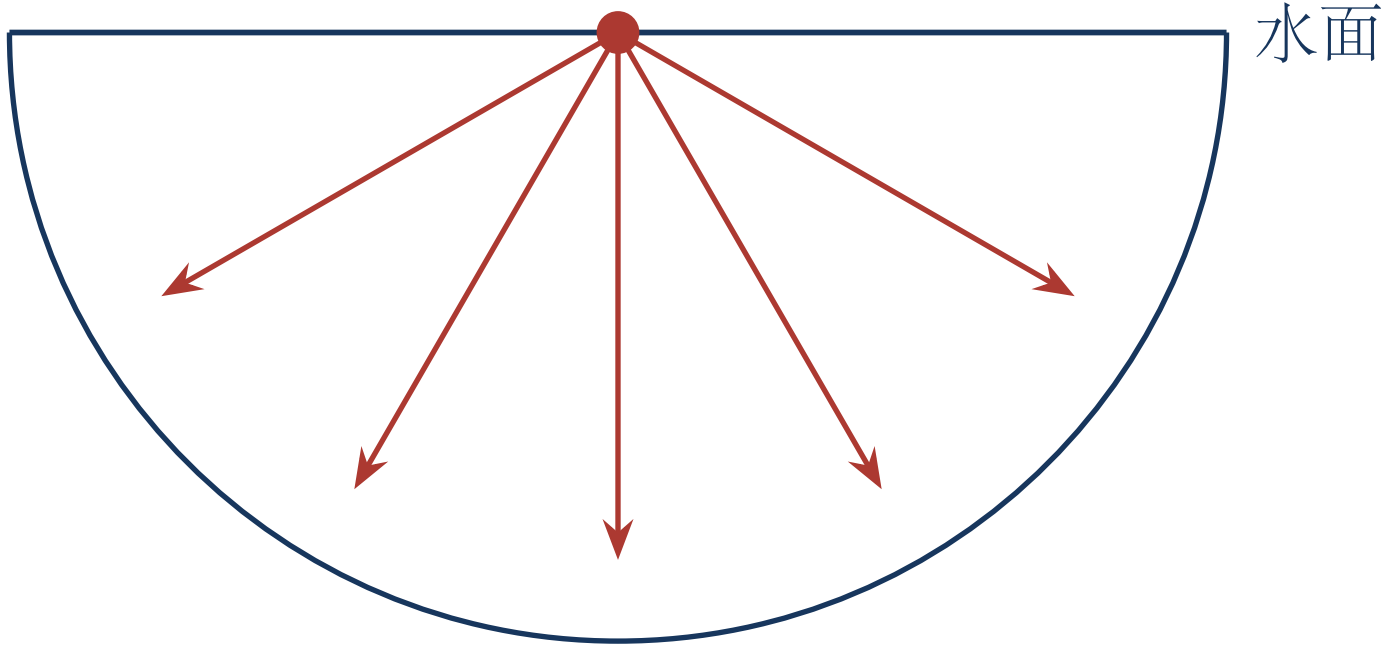
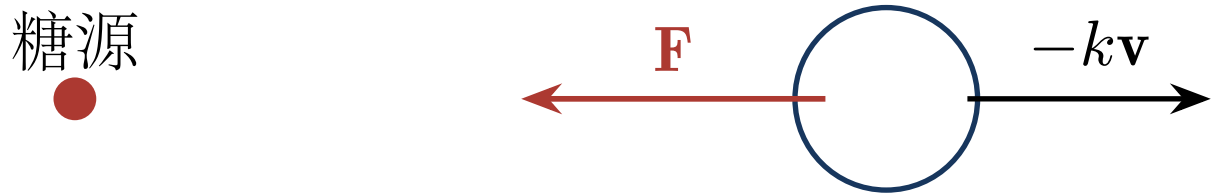
对边张力相减；常量背景消去，净力为 $S\nabla\sigma$



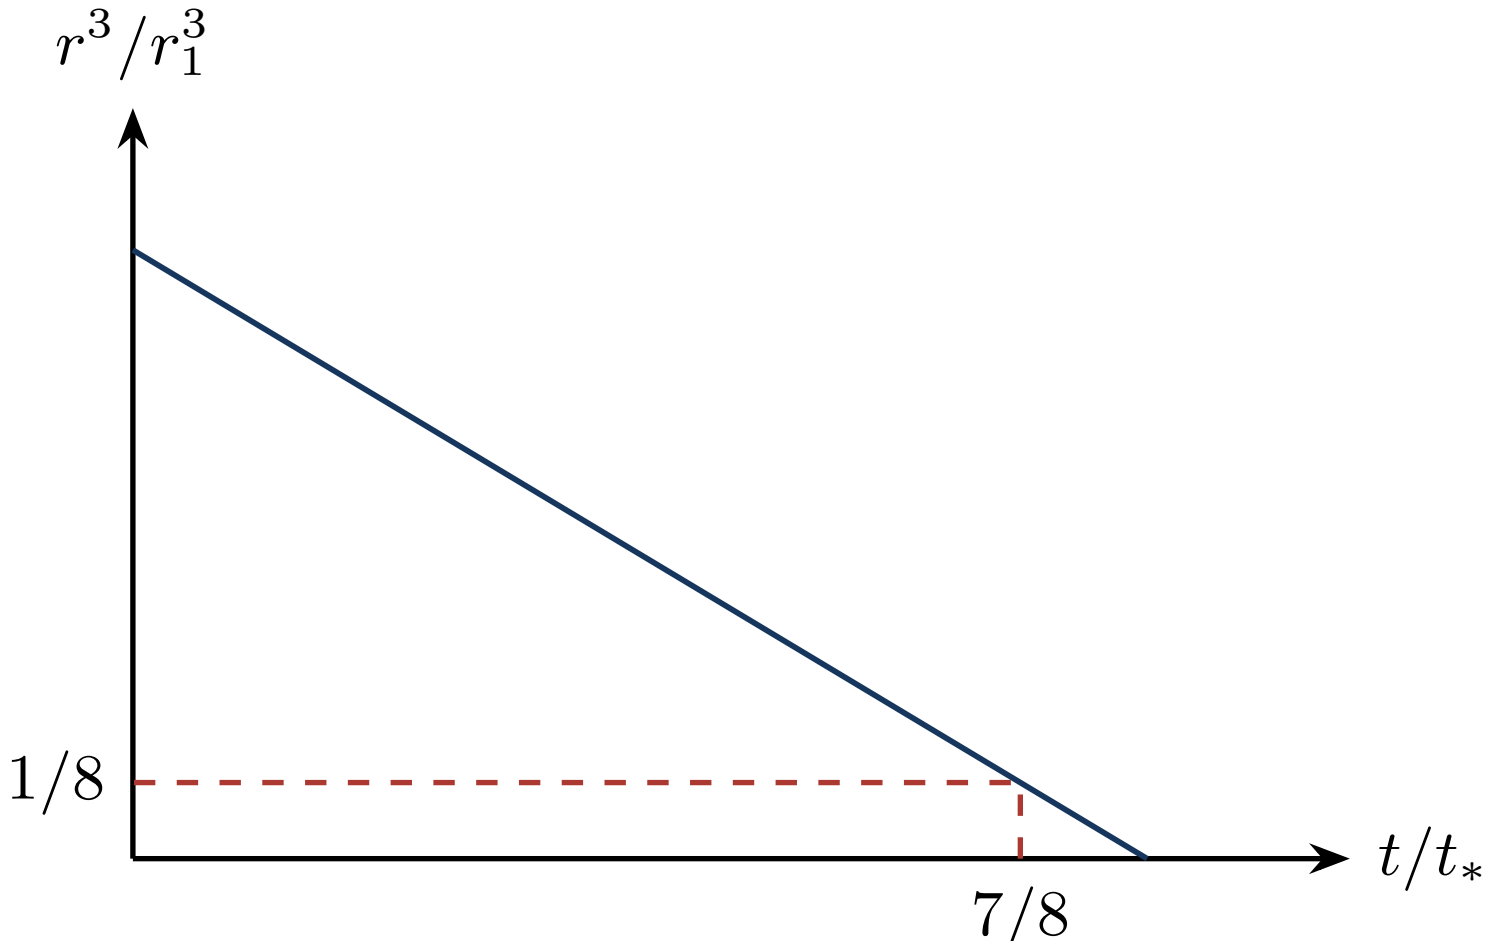
张力较大的一侧拉力较强；$a > 0$ 时糖源吸引叶片



深水半空间：流过半球面积 $2\pi r^2$，总摩尔率 J



终端漂移：$\dot{r} = -C/r^2$；张力力与阻力平衡



半径减半所需时间占形式原点时间的 7/8
