
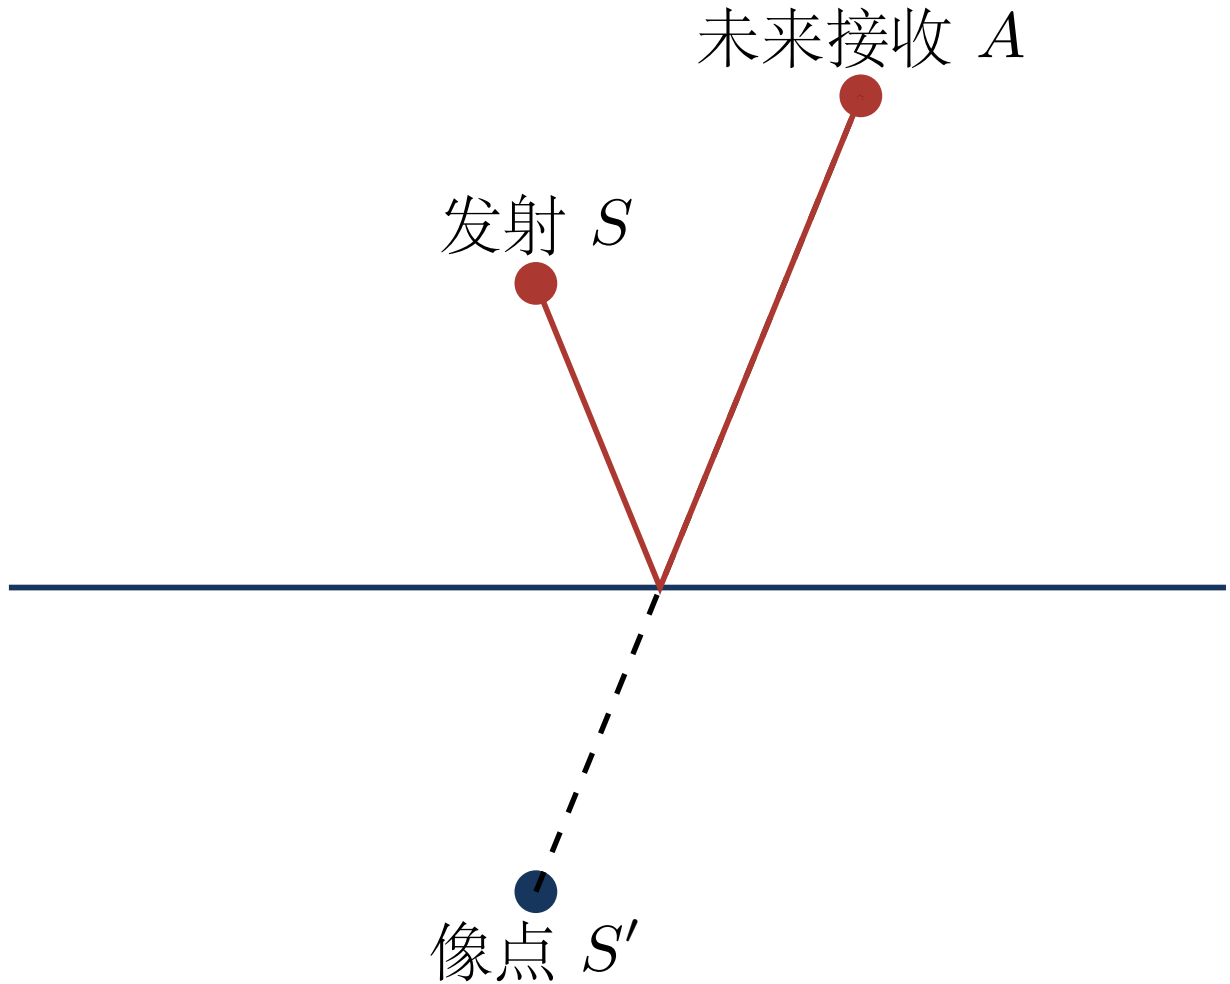
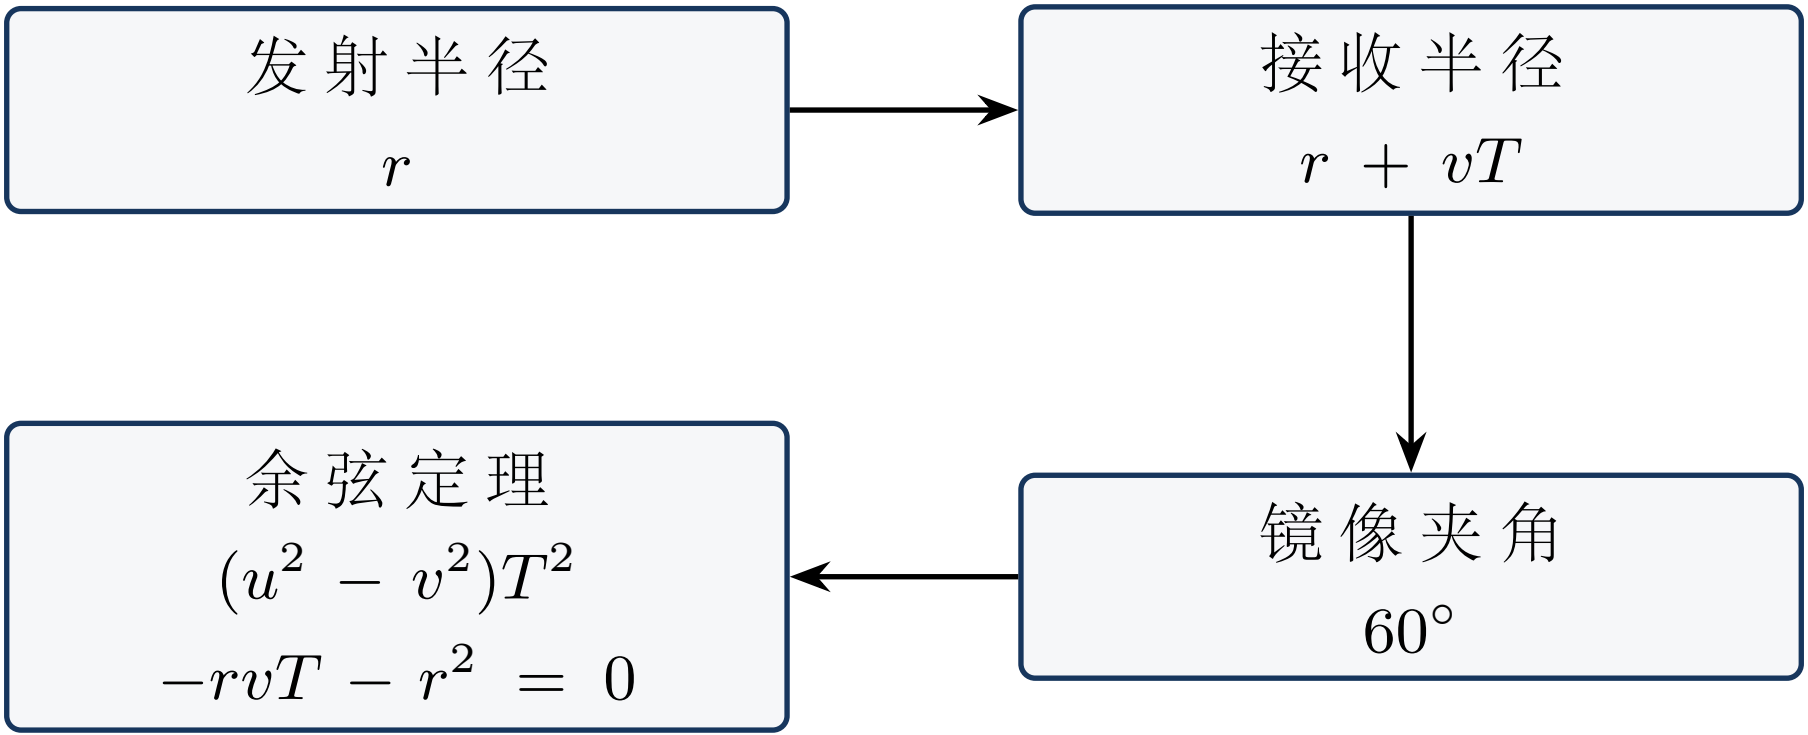
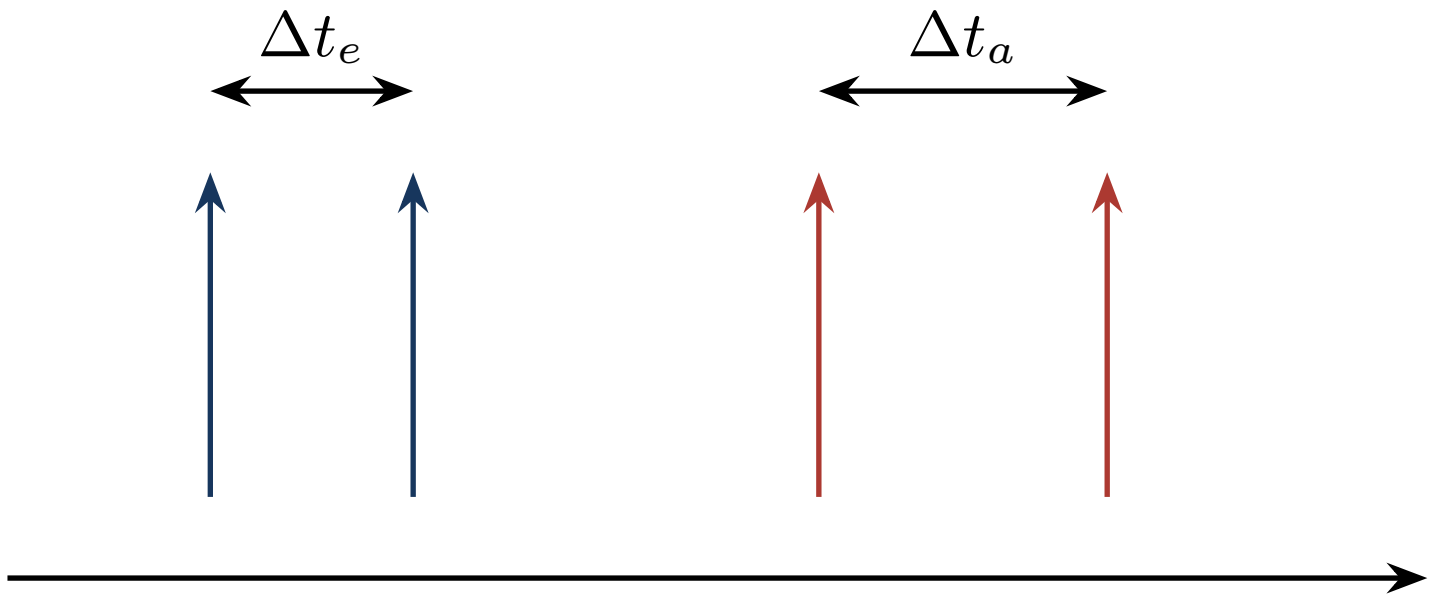
沿角平分线远离墙角；两墙一次回声互为镜像



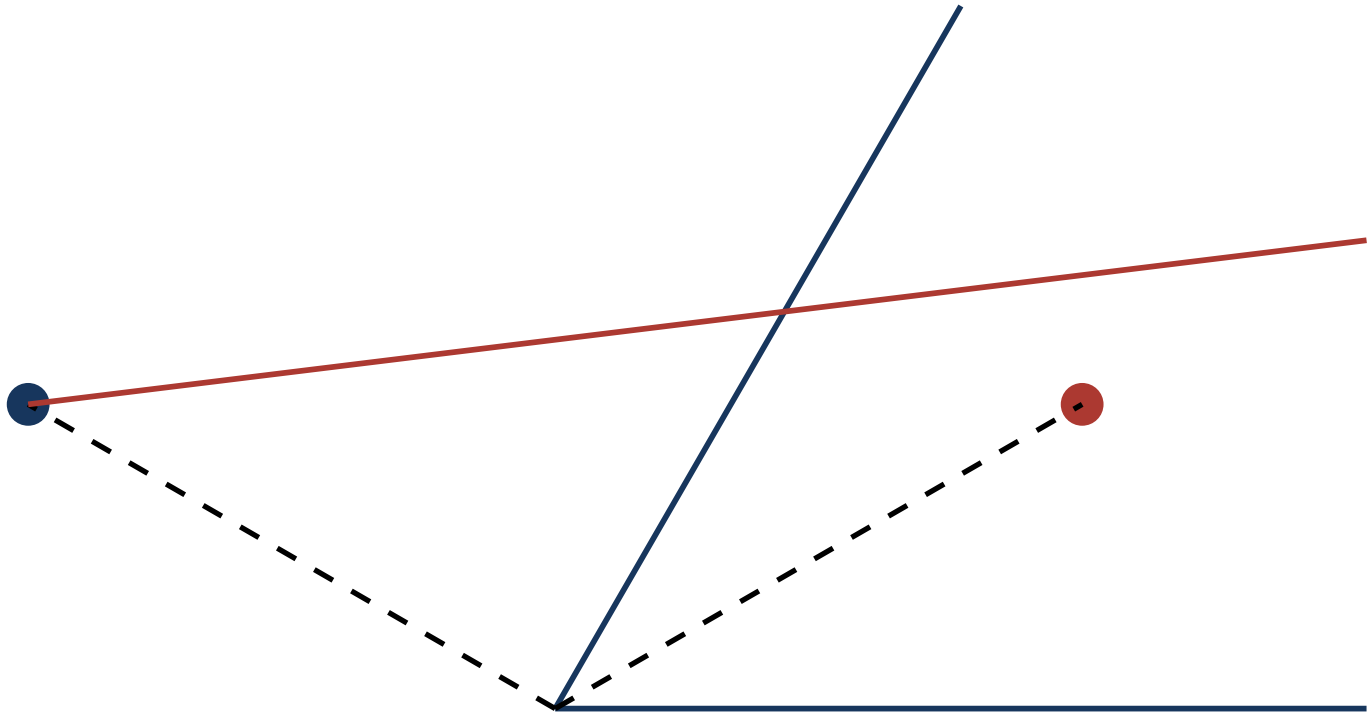
像点对应过去发射位置；实际回声路径在墙面折转



取正时间根；传播期间接收者仍继续向外运动



$$\Delta t_a \;=\; (1 \,+\, \beta K_1)\Delta t_e\,;\;\; f_1/f_0 \;=\; 0.703465$$



两次反射镜像方向差 120°；$f_2/f_0 = 0.547066$

180° 形式路径穿过顶点，须另行指定角点模型
