
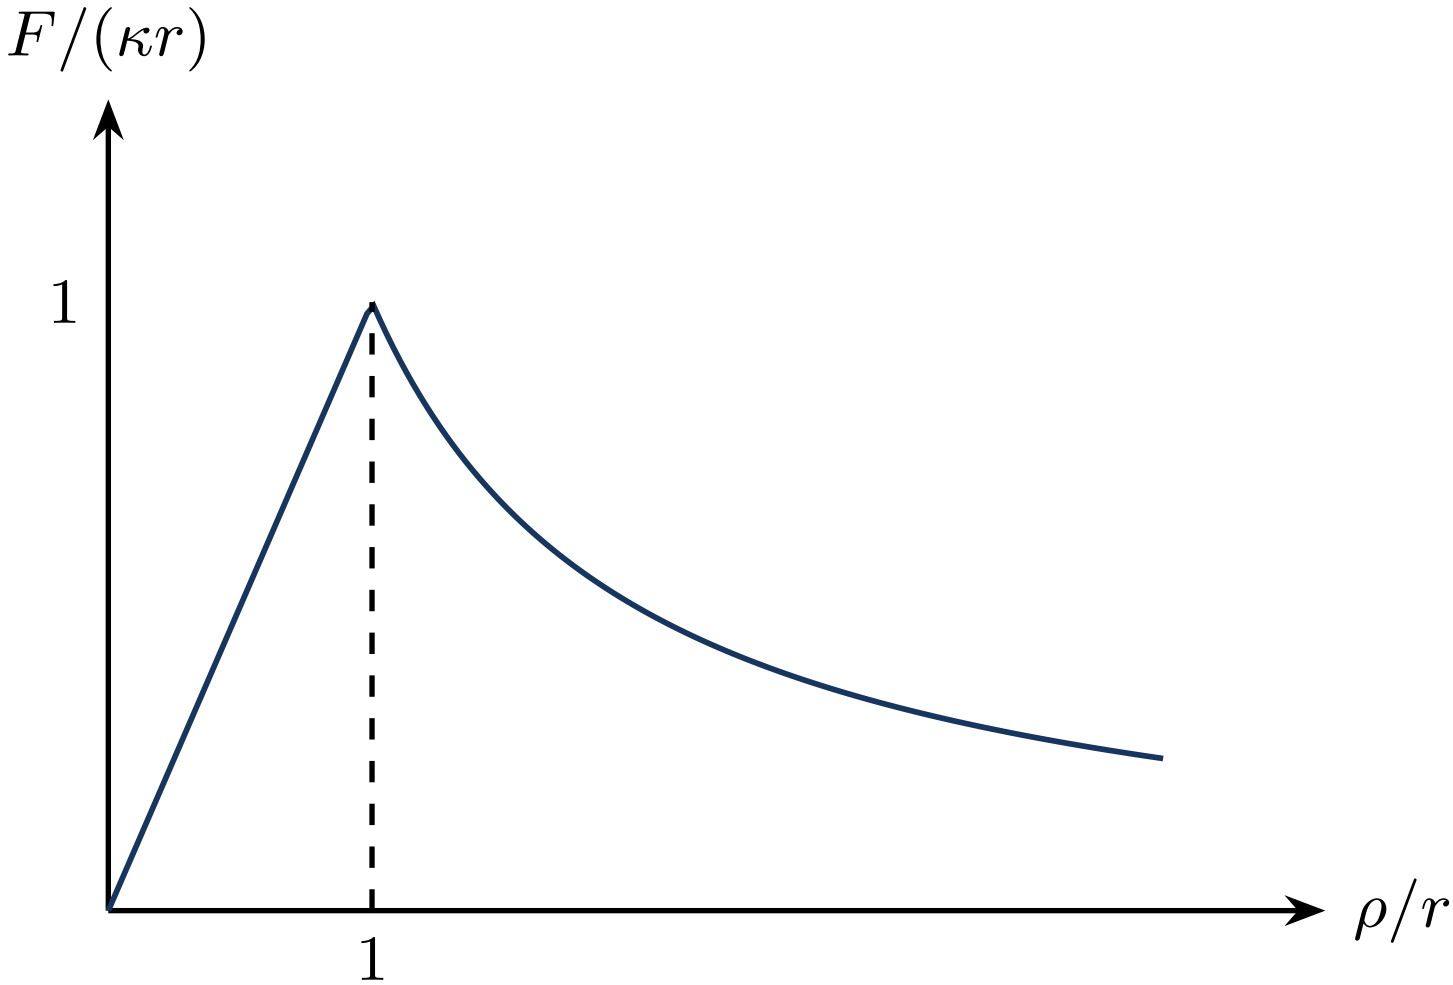
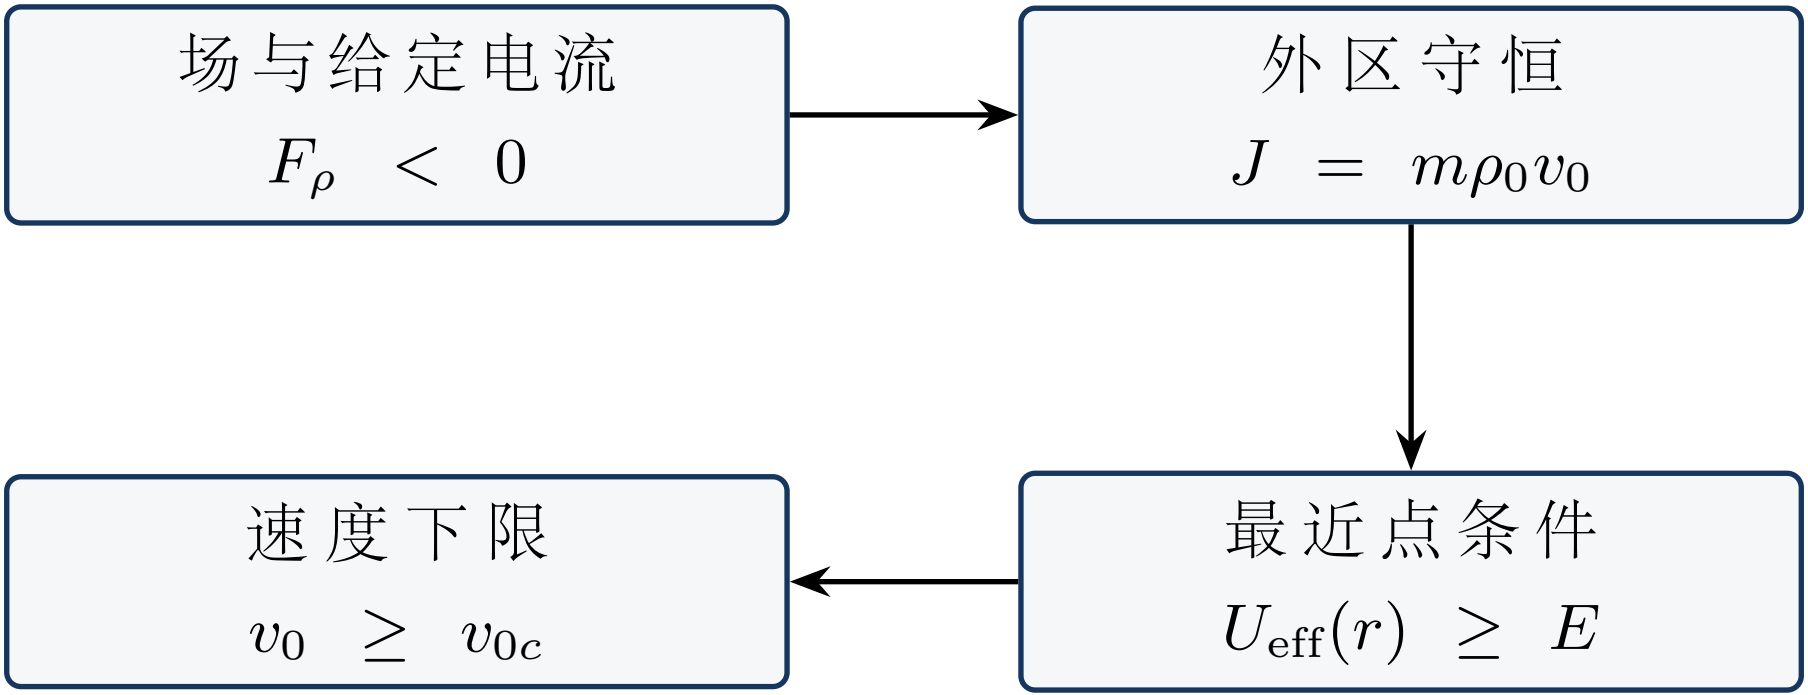
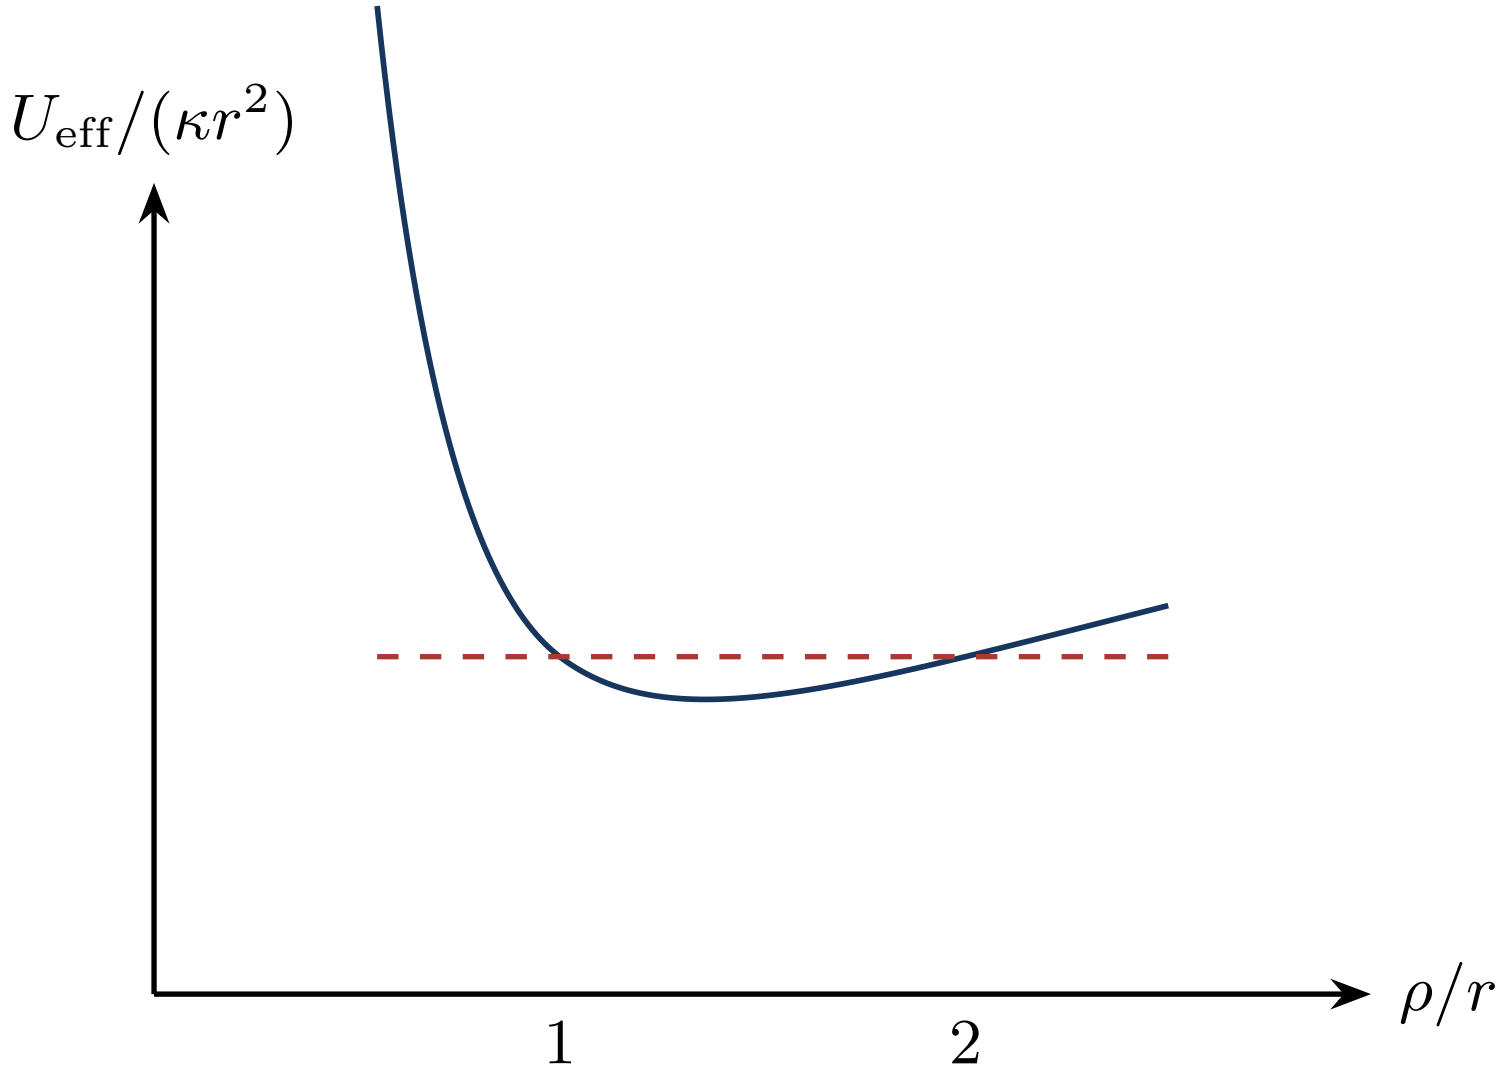
同向电流吸引；导线横向受力指向圆心



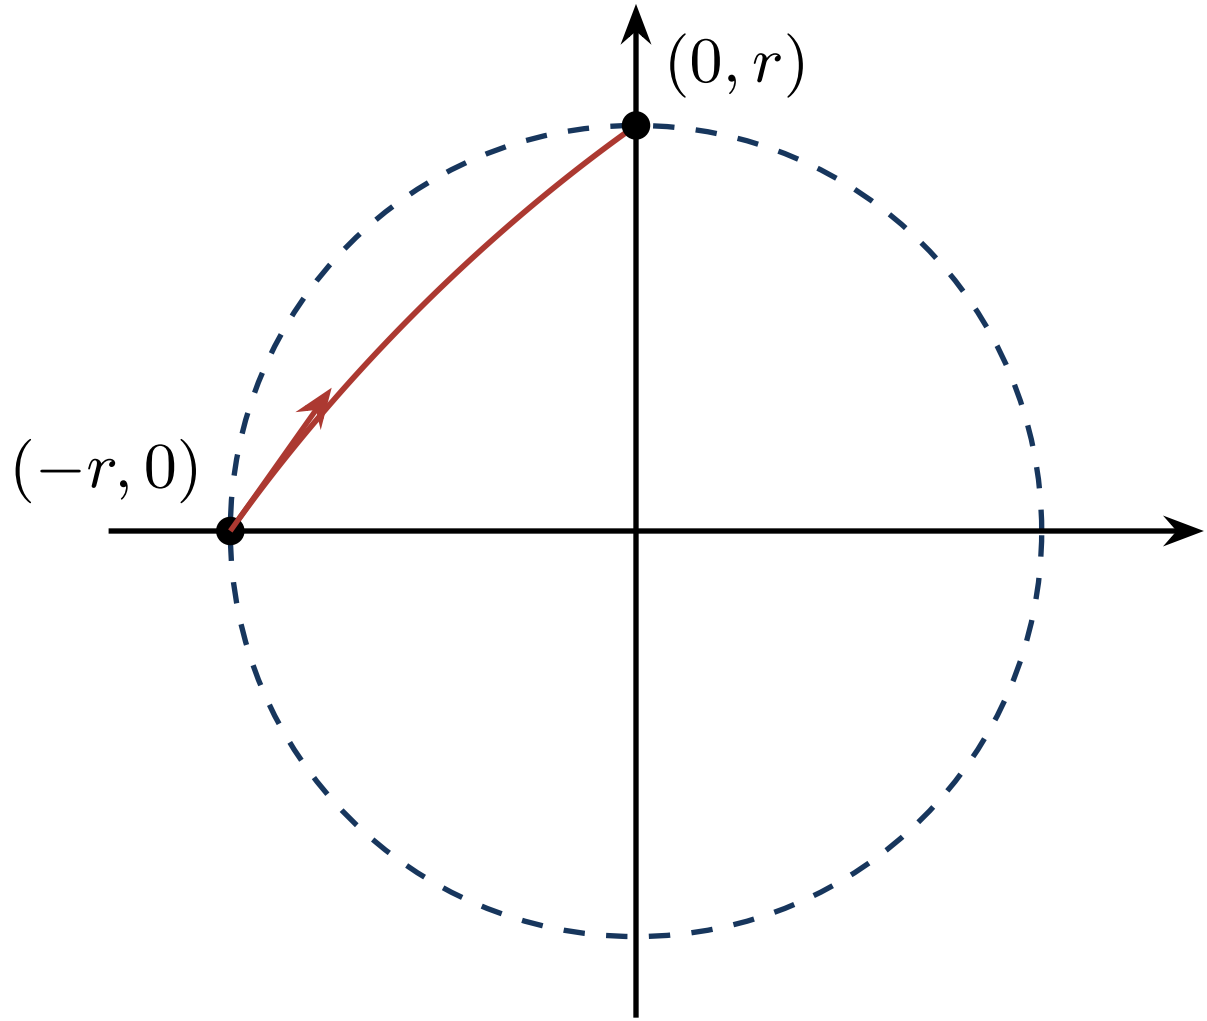
内区线性，外区反比；边界力连续



总能量和角动量必须同时使用；等号触边



临界轨道在两转折点 r 与 $\rho_0 = 2r$ 之间



$$v_1 = \sqrt{3}\omega r\colon\ \alpha = 54.7356^\circ,\ \omega t_e = \pi/4$$
