
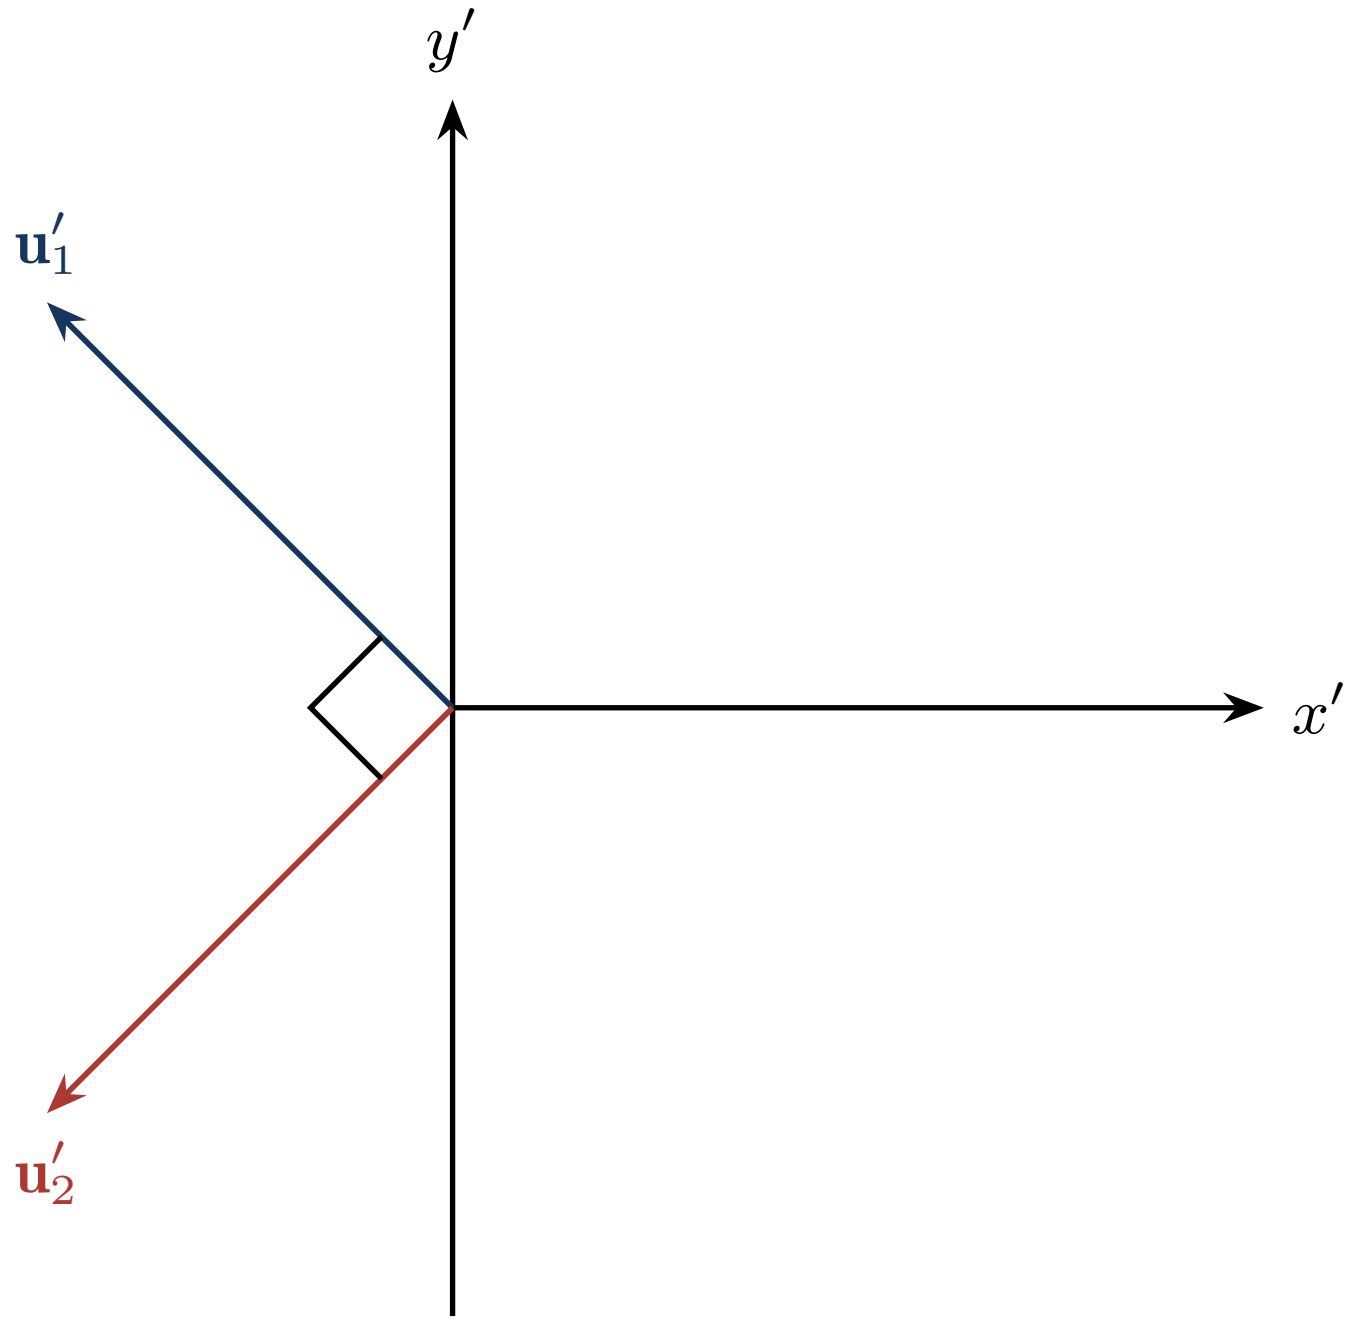
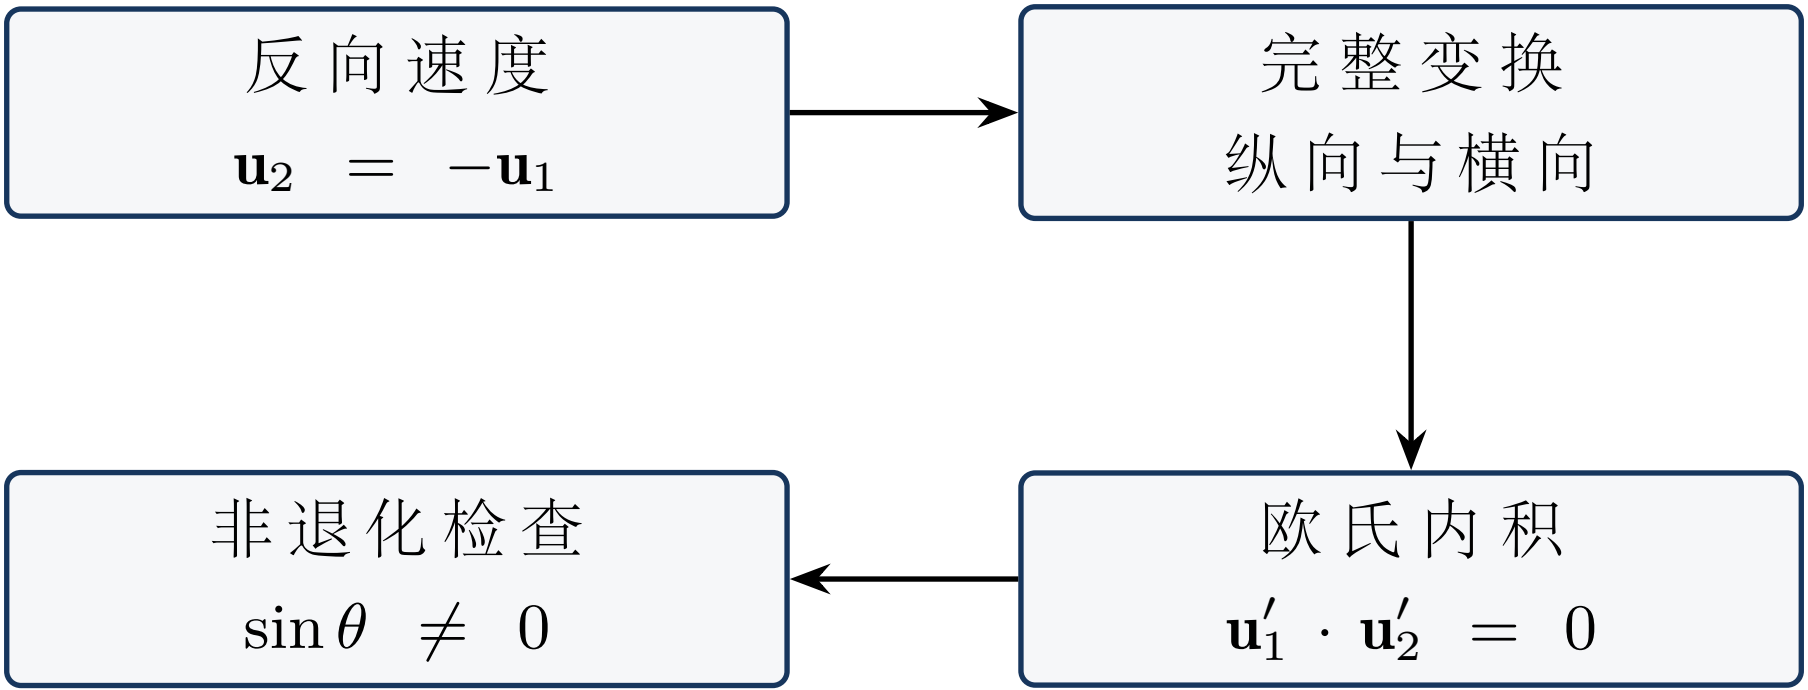
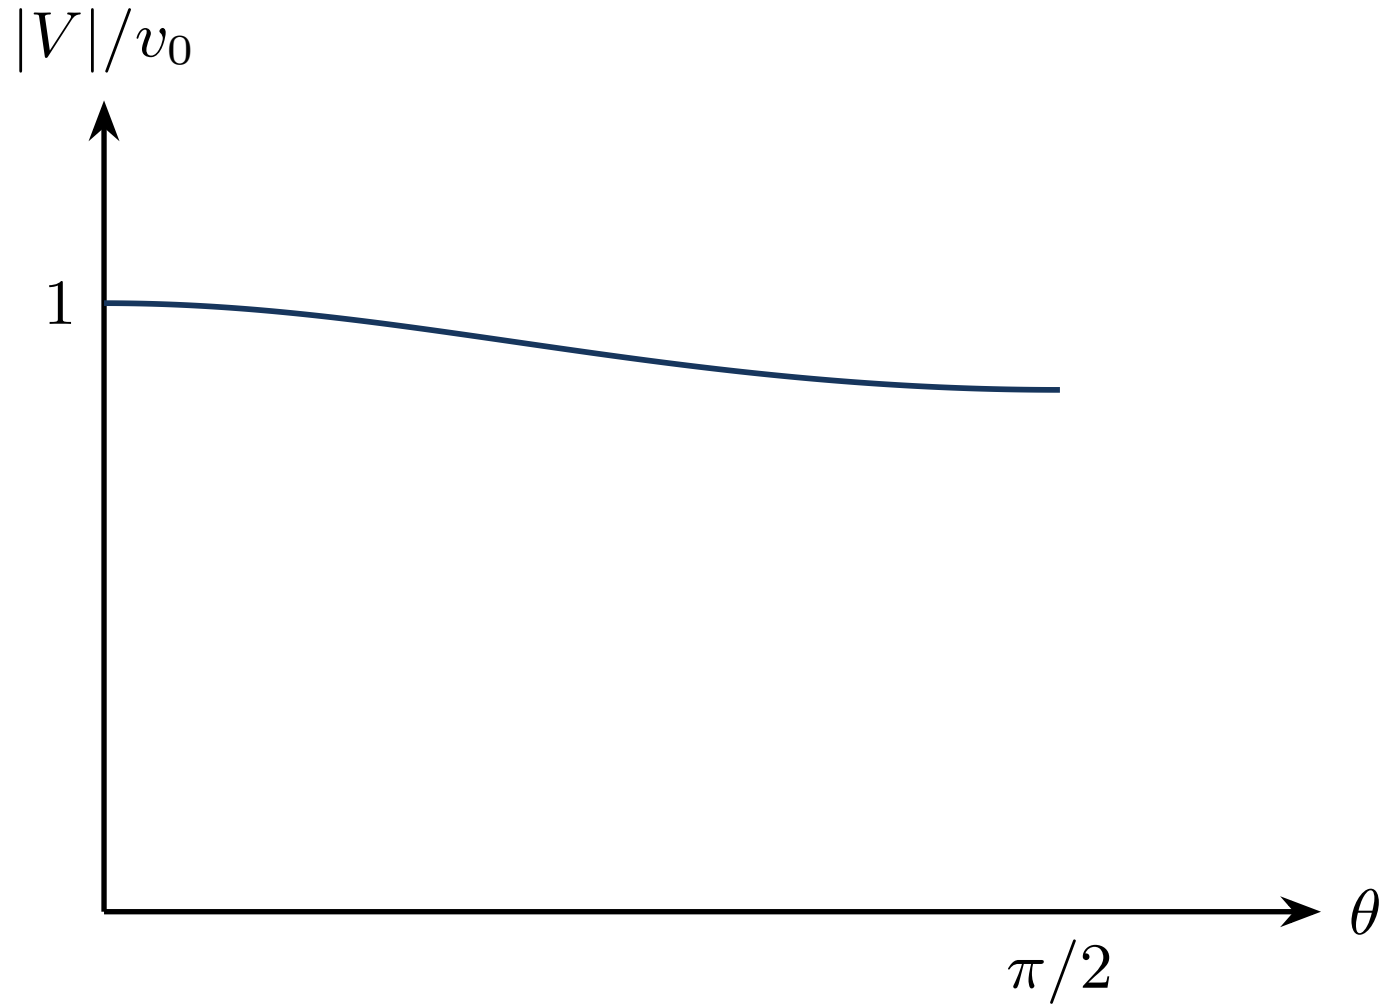
示例：两空间轨迹平行，粒子沿相反方向运动



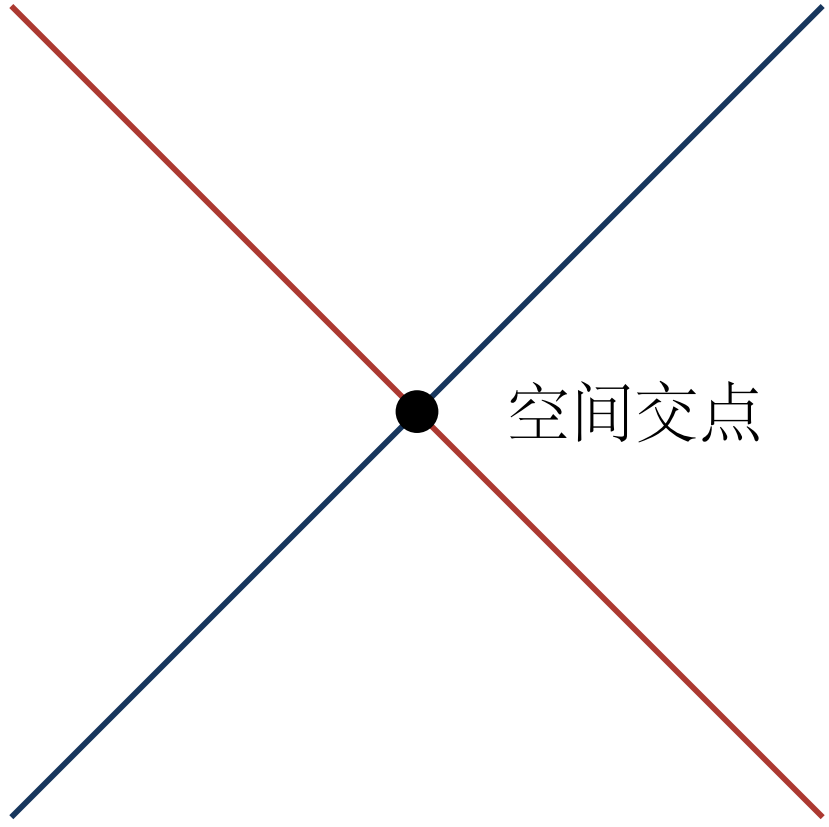
$\theta = 90°$ 时，直角条件 $V = v_0/\sqrt{1+v_0^2/c^2}$



同向同速的两粒子在所有惯性系仍有相同速度



$v_0 = 0.6c$；$\theta = 0$ 的形式极限含静止粒子，须排除



$t_2' - t_1' = d/(\gamma_V V) \neq 0$；空间交点不是碰撞事件
