
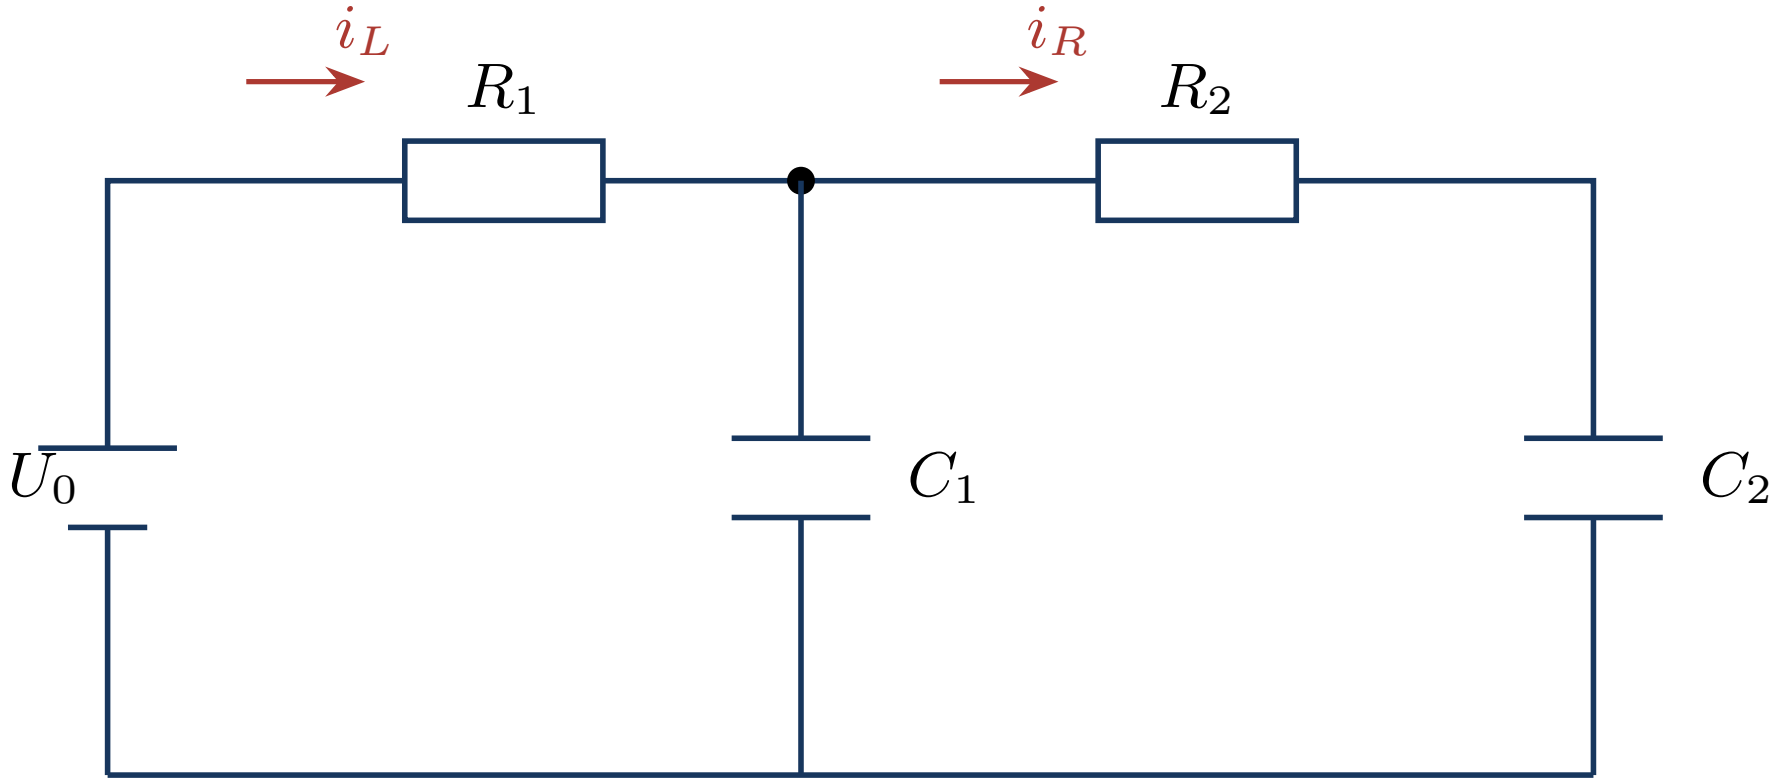
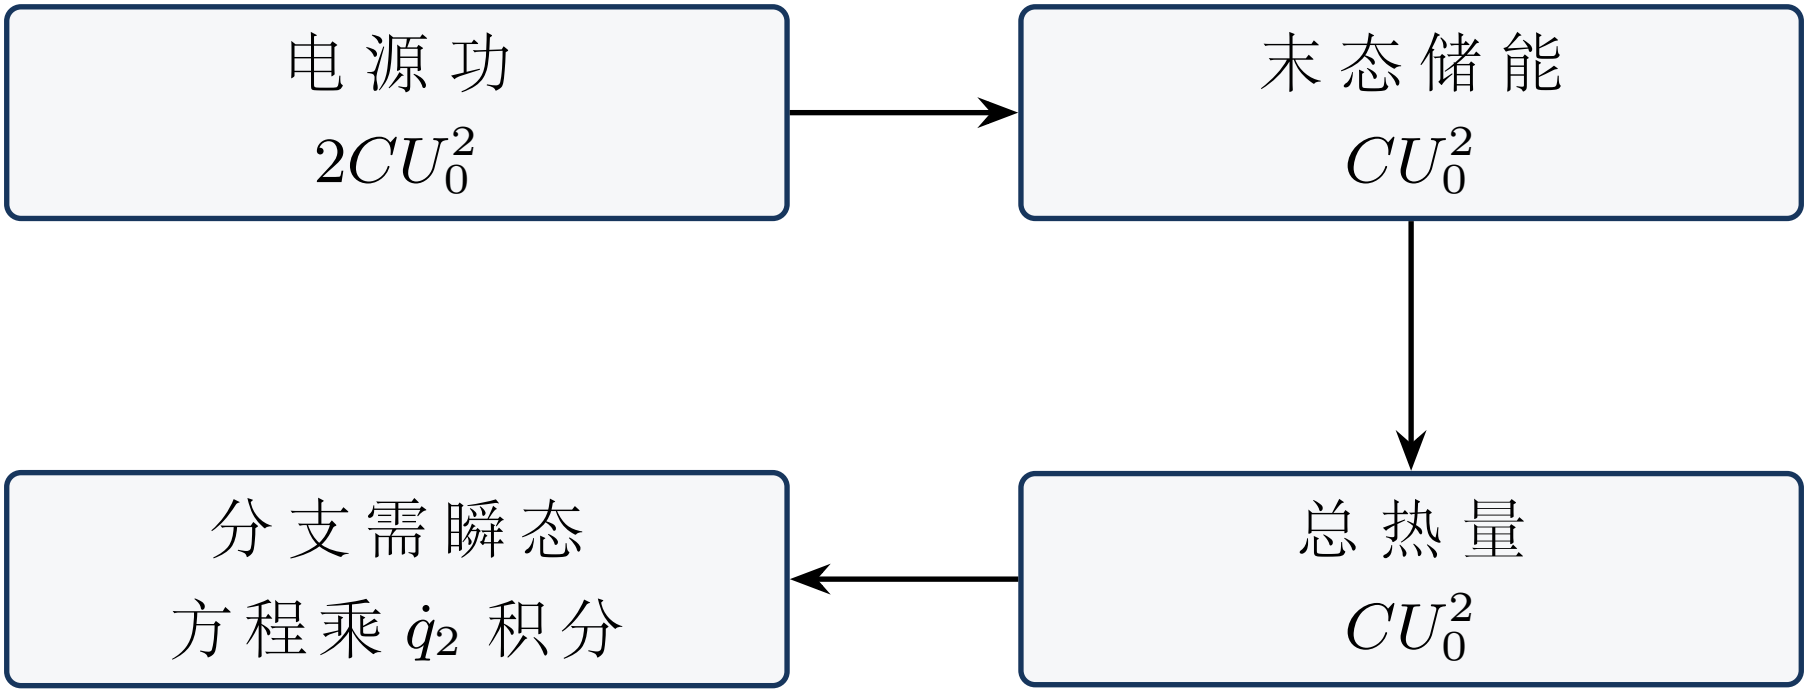
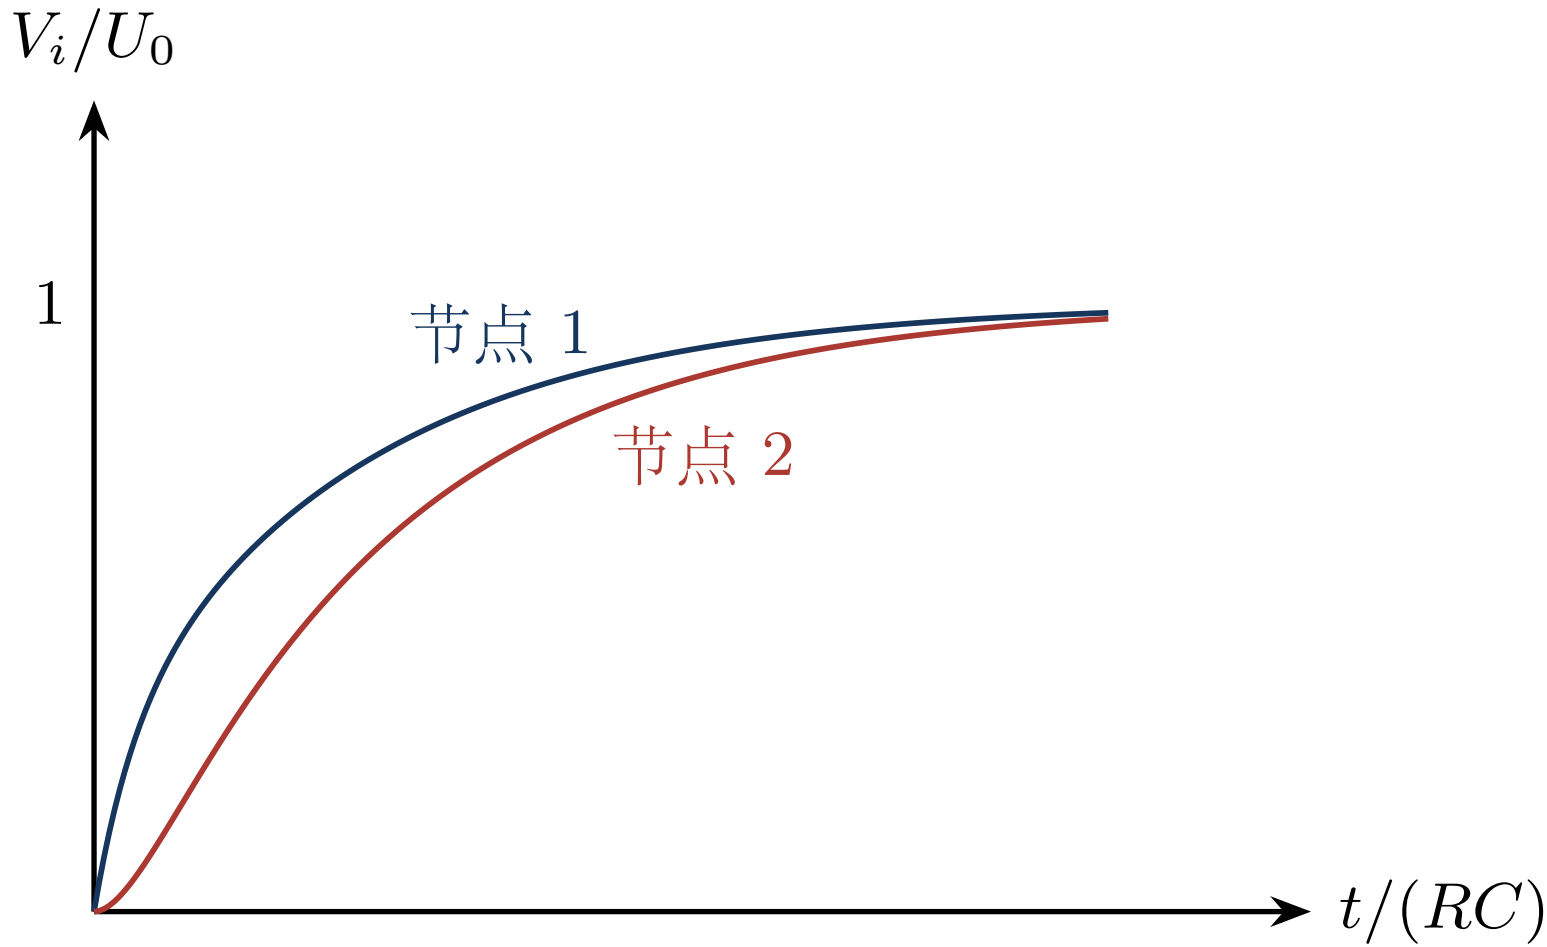
原题 $R_1 = R_2 = R$, $C_1 = C_2 = C$; 初态均无电荷



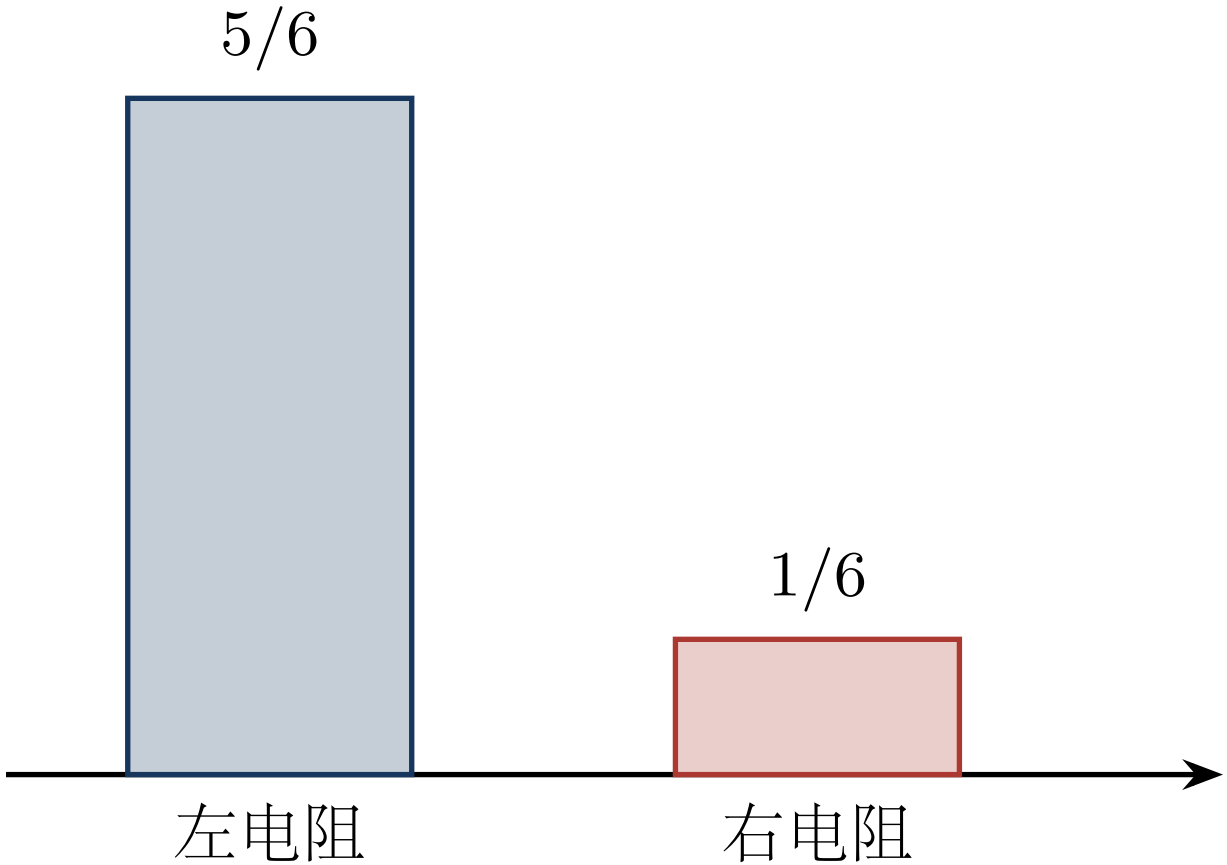
左电流 $i_L = \dot{q}_1 + \dot{q}_2$；右电流 $i_R = \dot{q}_2$



总热量由末态决定，分配不能仅看电阻是否相同



两个衰减模式；节点 1 先升压，右支初电流为零



单位 CU_0^2；独立瞬态积分恢复 5 ： 1
