
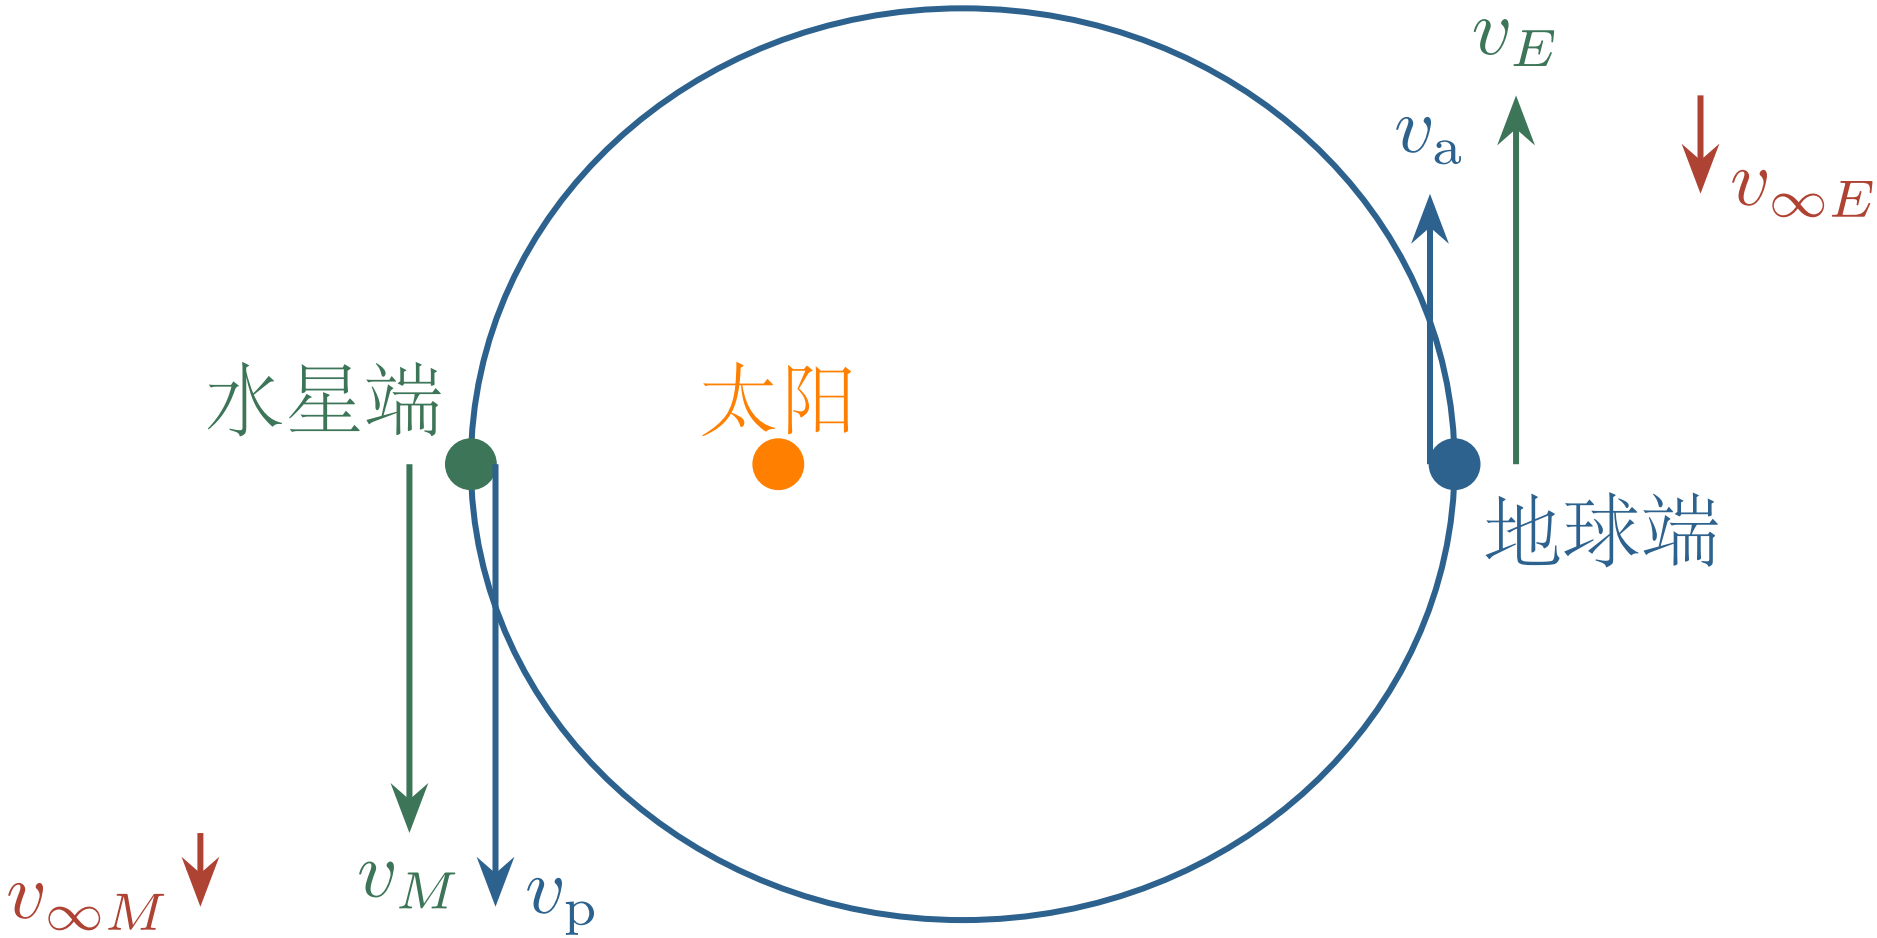
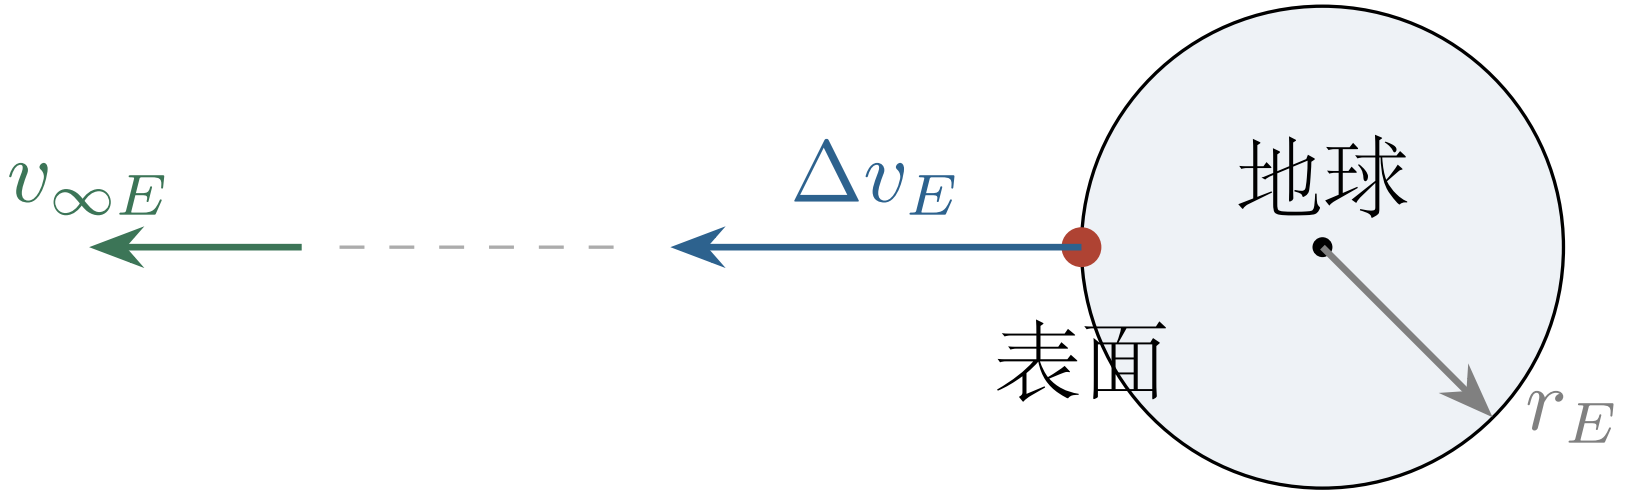
太阳在左焦点，所用转移段为上半椭圆



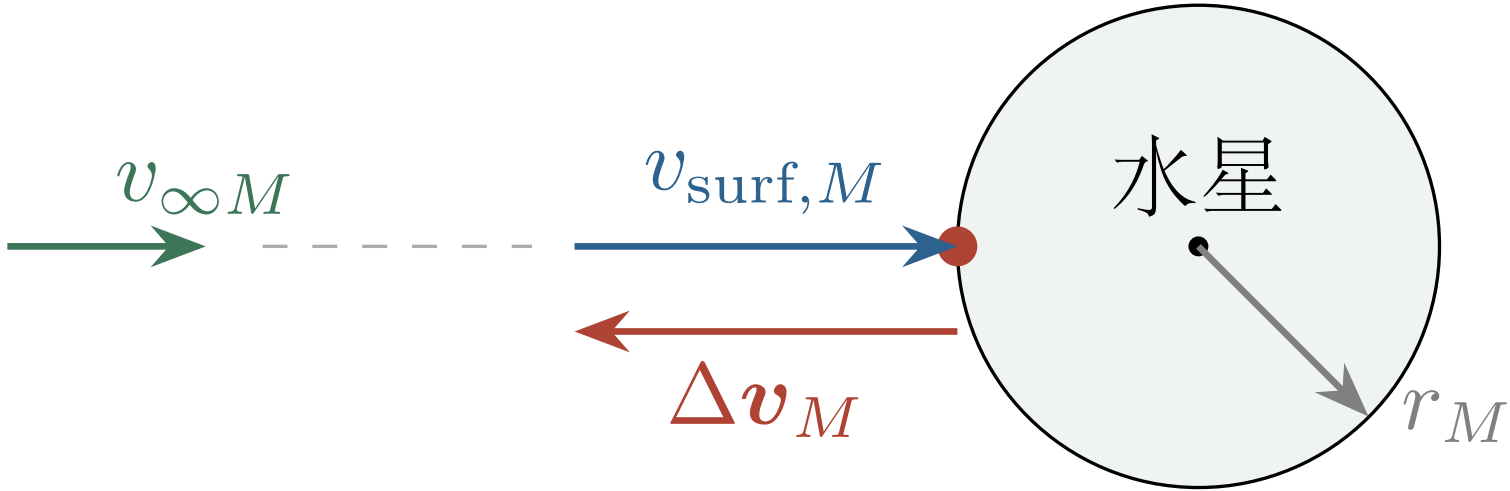
两端均顺行；红箭头为速度差

地球端逆公转，水星端顺公转



地球参考系：$\frac{1}{2}\Delta v_E^2 - \mu_E/r_E = \frac{1}{2}v_{\infty E}^2$

可选径向逃离方向与所需远处速度方向匹配



水星参考系：$v_{\mathrm{surf},M}^2 = v_{\infty M}^2 + 2\mu_M / r_M$

最后反向制动，着陆相对速度取零
